2 INTRODUCTION

In order to carry out its mandate of transmission and distribution of electricity, NamPower's has a transmission and distribution networks across all regions countrywide. The continuous operation of the transmission and distribution networks allow NamPower to provide uninterrupted supply of electricity to regions in order to improve the living conditions of Namibian citizens and to enable economic development. The 66kV Ruacana – Ruca – Etunda transmission line is part of this network and it transmits power to Ruca and Etunda Substations.

2.1 Project description

The Ruacana – Ruca – Etunda route runs north-westwards from the Etunda Substation passing through Ruca to the Ruacana Substation located at Ruacana Hydro Power Plant. This transmission line is about 38 km in length and was constructed in 1971 with steel structures. This application also include Ruca Substation associated with this line and it covers a footprint of about 556sqm. Below is the map showing the 66kV Ruacana – Ruca – Etunda transmission line.

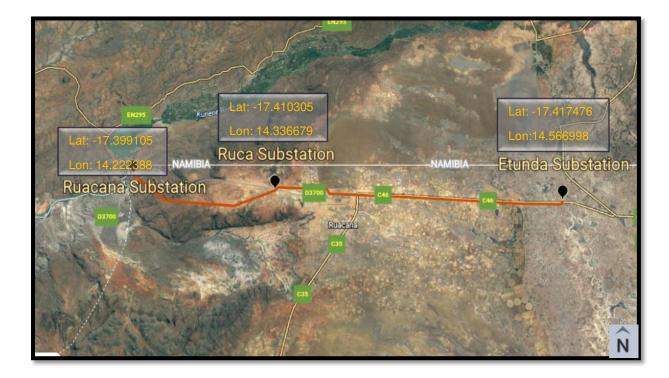

Figure 1: Locality map showing the 66kV Ruacana – Ruca – Etunda transmission line

2.2 General area description

The 66kV Etunda-Ruca-Ruacana line passes through the vegetation type commonly referred to as Mopane Savannah or the two vegetation types referred to as the Cuvelai Drainage and Western Kalahari. The main rivers draining the general area flow westwards e.g. perennial Kunene River (Ruacana area) and southwards e.g. ephemeral Cuvelai drainage system (Cunningham, 2023).

The general Etunda-Ruacana 66kV transmission line route, have numerous anthropomorphic influences mainly associated with traditional farming practices (e.g. mahangu fields, kraals), tracks and roads, transmission lines and associated access routes and infrastructures. The impact of common line activities such as inspections and general maintenance activities would be site specific and have a relatively small environmental "footprint" and is not expected to have a major impact on the environment. However, the rocky/mountainous section between Ruacana town and the Ruacana Substation is largely uninhabited. The route passes through 1 "hotspot" area with 26.7% of the route viewed as "high" sensitivity – i.e. unique habitats – and 73.3%) viewed as "low" sensitivity (Cunningham, 2023).

Figure 2. The Ruacana – Ruca – Etunda passing through the rocky/mountainous habitat east of Ruacana, viewed as "high" sensitivity.

3 OBJECTIVES AND SCOPE OF THIS ENVIRONMENTAL MANAGEMENT PLAN (EMP)

The operation of the transmissions line and station can have a negative impact on the receiving environment. However, the impacts are limited to the station boundaries and line servitude. It is thus important that good management measures are implemented to ensure that environmental damage is minimized. This Environmental Management Plan (EMP) seeks to manage and keep to a minimum the negative impacts associated with the transmission line and station and at the same time, enhance the positive and beneficial impacts.

The scope of this EMP include all activities associated with the operation of the transmission line, substations and other infrastructures. It is necessary to highlight that the EMP is a living document that should be periodically reviewed and updated. It should also be noted, that the EMP should be read in conjunction with laws and regulations outlined in section 5, Table 1 and all other applicable laws.

The aim of this EMP is to detail the management actions required to implement the mitigation measures identified thereby ensuring that any operational phase activity is carried out in a manner that takes cognizance of environmental protection and is in line with National legislation.

This EMP has the following objectives:

- To outline mitigation measures to be implemented during the operation phase, in order to manage and minimize the extent of environmental impacts.
- Minimize negative impacts and enhance positive impacts associated with the operations.
- To ensure that the operational activities do not result in undue or reasonably avoidable adverse environmental impacts, and ensure that any potential environmental benefits are enhanced.
- To identify key personnel who will be responsible for the implementation of the measures, outline functions and responsibilities.
- To propose mechanisms for monitoring compliance and preventing long term or permanent environmental degradation.
- To ensure that the concerns and complaints of Interested and Affected Parties (I&APs)
 with regards to the operational activities are addressed effectively and timely.

• Ensure compliance to legislative requirements.

4 POLICY AND LEGISLATIVE FRAMEWORK

Table 1 below outline the legislative requirements which are applicable to the operational activities.

Legislation:	Section (s) applicable:	Implications:
Environmental Management Act no 7 of 2007	Section 3	 All activities performed should be in line with the following principles:
		 Interested and affected parties should have an opportunity to participate in decision making
		 Listed activities should be subject to an EIA
	Section 27	 Polluter should pay for rehabilitation
		Pollution should be minimized
		Environmental assessments should be carried out for listed
	Section 33 onwards And all other applicable	activities. The proposed activity can be classified under the following range of activities:
	sections.	Generation of electricity
		Transmission of electricity
		These sections details the process to be followed in order to

EMA Regulations GN 28-30 (GG 4878) (February 2012)	 Listed activity: 5.1 6 – 9; 13; 15; 21 -24 Any other applicable sections 	 All existing listed activities must obtain a clearance certificate within one year of the law coming into effect. Therefore, all existing activities which can be considered a listed activity should apply for clearance. This activity can be considered as electricity generation and transmission. These sections details the process to be followed in terms of producing an Environmental Assessment and this process should be adhered to during the generation of information for this document.
No. 156 Labour Act, 1992: Regulations relating to the health and safety of employees at work.	All applicable regulations	All regulations applicable to different activities must be complied to.
Labour Act no 11 of 2007	 Section 3 Section 4 Section 9 Section 39 – 42 All other applicable sections 	 Children under the age of 16 may not be employed Forced labour may not be used. Basic conditions of employment as stipulated by the law must be met. The employer shall ensure the health and safety of all employees and non-employees on site. Employees must fulfil their duties in order to ensure their own health and

		safety and that of other employees and persons. Employees may leave the work site if reasonable measures to protect their health are not taken.
Electricity Act no 4 of 2007	Section 33	Installations used for the provision of electricity should be operated with due compliance with the requirements of laws relating to health, safety and environmental standards. Therefore – any company involved within the Electricity Supply Industry must adhere to the laws covering the previously stated aspects or stand to lose their licenses to operate.
Water Act no 54 of 1956	 Section 21 and 132 Section 23 All other sections applicable to different activities. 	 Conditions in terms of the disposal and management of effluent are to be adhered to. Any person causing pollution to a water source shall be guilty of an offence.
Public and Environmental Health Act no 1 of 2015	 Section 52 Section 53 All other sections applicable to different activities. 	 A person generating waste must ensure that the waste generated is kept and stored under conditions that causes no harm to human health or damage to the environment. Waste must only be disposed of at a waste disposal site, including an incinerator approved by the local authority concerned.
Water Resources Management Act no 24 of	Section 89All other sections	The owner or occupier or other person in control of land where

2013	applicable to different activities.	an incident that causes or is likely to cause a water resource to be polluted must take all reasonable measures to contain and minimize the effects of the incident; and to clean up polluted areas and remedy the effects of the incident.
Hazardous Substances Ordinance 14 of 1974	All other sections applicable to different activities.	or ill-health to or death of human
Fertilizers, farm feeds, agricultural remedies and stock remedies Act no 36 of 1947	DefinitionsSection 7	 Arborocide application is defined as an agricultural remedy under this Act Only registered pesticide may be
	Section 10	 May only buy herbicides in a container that complies with the prescribed requirements and is

	All other sections applicable to different activities.	 Sealed and labelled. Only allowed to use herbicides in the prescribed manner. Land owners must be notified about applications, and the following information must be supplied: Purpose of administration Registered name and number of the product Precautions to be taken before,
The Nature Conservation Ordinance (1975) as amended through the Nature Conservation Amendment Act of 1996.	Chapter 11: Game Parks, Nature Reserves, Conservancies and Wildlife Councils	 Permits are required to enter the National Park. Permits are also required for the removal of any protected plant or tree. It also stipulates that no damage may be done to any object of geological, ethnological, archaeological, historical or other scientific interest without the appropriate permits.
National Heritage Act No 27 of 2004	 Section: 46, 48, 55 All other sections applicable to different activities. 	 All heritage resources are to be identified and either protected or removed/mitigated with a permit from the National Monuments Council, before any development may take place A chance find procedure should be followed in case of discovery of a heritage resource.
Soil Conservation Act no 76 of 1969	Section 4Section 13	Institutions may be ordered by the relevant Minister to construct soil

	 Section 21 And other applicable sections 	 conservation works when and where necessary. Fire protection schemes may be implemented to regulate the prohibition of veld burning as well as the prevention, control and extinguishing of veld and forest fires. It is illegal to damage, destroy / fail to maintain any soil conservation works; fire belts; works constructed in terms of a fire protection scheme.
Forest Act no 12 of 2001	 Section 132 Section 41 And other applicable sections 	 Vegetation may not be removed within 100 m of a river, stream or water course A person shall be liable for damage caused by any fire which arises as a result of activities carried out on site without having taken reasonable measures to prevent a fire.

5 ROLES AND RESPONSIBILITIES

It is the responsibility of NamPower and/or contractor to ensure that all the environmental management actions are carried out effectively and timeously. It is important to note that the successful implementation of the EMP is, however dependent on clearly defined roles and responsibilities by several stakeholders. Below are the key employees that are responsible for the management of environmental and social issues during the operational phase:

Table 2: The roles and responsibilities for operational activities:

Responsible person	Responsibilities
The Area Superintendent	 Is responsible for the enforcement of the EMP To ensure that environmental requirements are adequately
	covered in any external service provider contracts.

	 To ensure that SHE requirements are included in the tender documents sent to the contractors. A copy of this EMP should also form part of the tender documents.
	 To ensure that corrective actions are implemented for non- compliances.
	 To ensure that appropriate records and information regarding compliance with environmental requirements are maintained.
	 To ensure that the line remain in compliance with the requirements of this EMP, through regular communication and monitoring.
	 To ensure that all incidents, accidents and complaints are reported to the project manager. The contractor to ensure that incidents and accidents are investigated to prevent re- occurrence.
Project Manager	Is responsible for the enforcement of the EMP.
	To ensure that SHE requirements are included in the tender documents sent to the contractors.
	 Must ensure that the contractor remains in compliance with the requirements of this EMP.
NamPower SHEW	To ensure that all requirements with regards to this EMP are fulfilled.
	 To assist the Project Manager in ensuring that the contractor remains in compliance with this EMP.
	 Communicate NamPower SHEW requirement to the contractors and NamPower employees.
	 Provides SHEW inductions to NamPower and contractor employees.
	Implement monitoring and conduct audits in consultation

with the Project Manager. Document and communicate monitoring, audit and inspection findings to project manager and area superintendent. Communicate the final inspection report to the Project manager on contractor compliance to the EMP before the project close-off and final payment is made to the contractor. Contractor Is responsible for the implementation of the EMP SHE officer responsible the as implementation of this EMP. To ensure that all tasks undertaken under the scope of work, are in accordance both with NamPower's SHEW policies and procedures as well as to the requirements of this EMP. Ensure that employees are regularly trained and awareness built relating to environmental and social management. To ensure that all incidents, accidents and complaints are reported to the project manager. The contractor to ensure that incidents and accidents are investigated to prevent reoccurrence. Ensuring that all employees receive a SHEW induction before the start of the project. Ensuring that the work being done does not create a nuisance to any being working, residing or living on adjacent properties or within the immediate surroundings of the site.

6 DESCRIPTION OF OPERATIONAL ACTIVITIES TO BE UNDERTAKEN AND ASSOCIATED IMPACTS

The table below outlines the summary of the operational activities and associated socioeconomic and environmental impacts.

Table 3: Description of the activities related to the operational activities.

Activity	Description	Associated potential impacts
,	•	•
General functioning of the station and transmission line.	Physical presence and functional characteristics of the station and associated line.	 Animal (including birds) mortalities through collisions and electrocution. Destruction of avifauna, especially protected spp. Visual impact. Community impacts in a form fatalities or injuries caused by electrocution. Meeting electricity demand
		(positive impact).
Maintenance of the station and line	The maintenance of the station and line entails:	Soil and water contaminationWaste generation leading to filling
	 General equipment repairs. 	up of landfill space • Destruction of vegetation;
	 Replacement and servicing of batteries. 	vertebrate fauna; avifauna especially protected spp. and sensitive habitats.
	 Maintenance of electrical equipment such as transformers, relays and capacitors. 	 Social issues related to the introduction of new workers in the area, e.g. HIV/AIDS spreading.
	Maintenance of electrical equipment such as	 Loss of human life (through electrocution).

Construction	transformers, relays and capacitors. • Construction or repairing of access roads. Construction include the following	Noise emissions
	 Construction or refurbishment of buildings (digging and setting of foundations, digging of cable trenches and other activities). Installation or extension of boundary fences Upgrade of electrical equipment (either in size, capacity or technology). Personnel conduct in surrounding communities. 	 Air emissions Introduction of new people in the area leading to the spread of diseases such as HIV/AIDS Soil and water contamination Waste generation leading to filling up of landfill space Employment of casual workers Loss of biodiversity reduces habitat availability and food sources for many animals. Loss of sensitive plants and habitats. Loss or damage of heritage resources.
Periodic inspections and monitoring Use and storage of	Replacement, cleaning and maintenance of station and line components. Storage of hazardous	 Soil and ground water contamination as a result of oil spills Soil contamination as a result of improper waste handling and disposal. Loss of biodiversity if existing access roads are not put to use. Possible oil spills and soil

Hazardous	material.	contamination from electrical units
Substances		such as transformers.
Installation of Optic Fibre networks	Design, Supply, Delivery, Installation and Commissioning of Optic Fiber networks for communication purposes.	 Loss of biodiversity Soil contamination as a result of improper waste handling and disposal. Loss of sensitive plants and habitats.
Vegetation Management	Removal of trees and bushes to maintain access to the line servitude. Removing weed from the substation yard.	 Destruction of vegetation; vertebrate fauna; avifauna especially protected spp. and sensitive habitats. Conflict with landowners Loss of topsoil Soil and water contamination Loss or damage of heritage resources. Soil erosion Destruction of sensitive habitats

7 MANAGEMENT AND MITIGATION MEASURES

In order to ensure that the potential impacts are eliminated and/or minimised, it is necessary to ensure that the various activities related to the operation of the powerlines and station are adequately managed and monitored. Table 4 below outline mitigation measures as well as objectives to be achieved. A responsible person (s) have been assigned to each mitigation measure (s).

Table 4: Proposed mitigation measures for the general operational activities

ASPECT	MANAGEMENT AND MITIGATION MEASURES/COMMITMENTS	RESPONSIBLE PERSON
Safety Health and Environmental (SHE) Awareness	 All employees should undergo SHE induction before work commences onsite. All employees are to be made aware of their individual roles and responsibilities in achieving compliance with the EMP. SHE toolbox talks to be conducted by the contractors and records to kept onsite. Warning signs must be placed on and around the site. 	Area superintendentProject managerSHEWContractor
Safety Management	 Develop and implement an occupational health and safety system that comprises key elements such as risk assessment and safe working procedure. All work activities to be done under the supervision of a competent person. Appropriate warning signs must be placed on the facilities. 	Area superintendentProject managerContractor
Fire Management	 Eliminate the presence of potential sources of ignition and provide appropriate equipment to minimize fire risk. Fire extinguishers to be readily available onsite, especially when hot works are 	Area superintendentProject managerContractor

ASPECT	MANAGEMENT AND MITIGATION MEASURES/COMMITMENTS	RESPONSIBLE PERSON	
	conducted.		
	Regular servicing of fire extinguishers.		
	Firefighting training to be provided to employees.		
Air Quality	Dust generation from all activities must be minimised.	Area superintendent	
	Excavation, handling and transportation of erodible materials shall be avoided	 Project manager 	
	under high wind conditions or when a visible dust plume is present.	 Contractor 	
	Speed limit to be enforced to control dust emissions.		
	Dust suppression measures shall be implemented when necessary.		
	Vehicle, machinery and equipment shall be maintained in good working order		
	in order to minimise exhaust fume emissions.		
	Vehicle, machinery and equipment must be serviced by competent personnel		
	and records must be kept onsite		
Resources Efficiency	Minimise water wastage and record water usage.	Area superintendent	
	Avoid wasteful use of materials.	Project manager	

ASPECT	MANAGEMENT AND MITIGATION MEASURES/COMMITMENTS	RESPONSIBLE PERSON
	Source goods and services locally were possible	Contractor
Waste Management	Minimise the generation of waste by applying the waste hierarchy.	Area superintendent
	Station and line servitude to be kept free of waste.	Project manager
	 No burning, burying or dumping of any waste materials shall be permitted onsite. 	 Contractor
	 Labelled waste bins with lids must be provided at substations/campsites for all waste streams and ensure that waste is disposed at nearest approved waste disposal site. 	
	Ensure that waste segregation is done at source.	
	 Hazardous waste shall be disposed of at a registered hazardous waste disposal site. 	
	Safe disposal certificates for hazardous waste must be kept in the SHE file.	
	Concrete waste must not be dumped on site.	
Wastewater management	Water containing environmental pollutants shall be collected and removed from site.	Project managerContractor

ASPECT	MANAGEMENT AND MITIGATION MEASURES/COMMITMENTS	RESPONSIBLE PERSON		
	No waste water runoff or uncontrolled discharges from the site/working areas shall be permitted.	Area superintendent		
	Mobile toilets or septic tanks should be used in remote areas.			
Hazardous Substances	On the line servitude:	Area superintendent		
	 Ensure that drip trays are available for vehicles when conducting maintenance activities in case of transmission fluid spills. Maintain a planned and corrective maintenance schedule for vehicle 	Project managerContractor		
	At the substations or campsite:			
	The use, handling, storage and disposal of the hazardous chemical must be in accordance with the MSDS.			
	Containers must be clearly marked to indicate contents and quantities.			
	Hazardous substances storage areas must be bunded. A bund should be able to contain 110% of the volume of the largest container stored within it.			
	All transformers to be contained in bunded areas.			
	Diesel and other liquid fuel, oil and hydraulic fluid must be stored in appropriate			

ASPECT	MANAGEMENT AND MITIGATION MEASURES/COMMITMENTS	RESPONSIBLE PERSON		
	storage tanks or in bowsers with secondary containment.			
	 Inspect and maintain hazardous storage areas and bund walls to avoid overflows. 			
	Spill kit and absorbents must be available onsite at substations.			
	All spills must be reported, cleaned and remediated to in compliance with			
	SHEW requirements (applicable to both line servitude and substations).			
Social Impact	 NamPower/ Contractor must sign land permission form and agreement with land owners prior to commencement of work onsite. Employees should limit their contact with permanent residents of the area. 	Area SuperintendentProject Manager		
	 Employees should be properly educated about the impact of HIV / AIDS and pregnancies. 	All NamPower employees		
	 The use of intoxicating liquor or drugs of any kind by the employees is strictly prohibited. 	 Contractor 		
	Ensure that all queries and complaints are documented and dealt with.			
	A register shall be kept of all complaints from stakeholders.			
	All claims shall be handled immediately to ensure timely rectification.			

ASPECT	MANAGEMENT AND MITIGATION MEASURES/COMMITMENTS	RESPONSIBLE PERSON
Archaeology	 Should a heritage site or archaeological site be uncovered or discovered during the operation phase, a "change find" procedure in appendix 8 should be applied. Any chance finds must be reported to NamPower environmental section. In an event of discovery of human remains or other artefacts the work shall cease. A professional archaeologist is to be consulted and carry out investigation. 	Area superintendentProject ManagerSHEWContractor
Fauna and Flora	 Ensure that the site is kept clean and free of rubbish that could potentially attract animals and pests No harvesting or damaging of plants is allowed. Poaching or capturing of any animal (wild or domestic) is prohibited. Bird nests may not be disturbed unless interfering with the normal operation of the line/station. No domestic animals may be kept onsite site as they can introduce diseases or interbreed with the animals occurring naturally in the area. Vehicles driving along the lines should engage four wheel drive to prevent 	Area superintendentProject ManagerContractor

ASPECT	MANAGEMENT AND MITIGATION MEASURES/COMMITMENTS	RESPONSIBLE PERSON
	spinning and consequent impacts on soil surface.	
	 Do not destroy, damage, collect any protected flora species that may be encountered during operational activities. 	
	Minimise activity rocky/mountainous escarpment area	
	Only remove/prune flora directly affecting the transmission line;	
	 No chemical and mechanical clearing in pan habitats – rather manual clearing in these areas; 	
	 Mechanical clearing, without chemical aftercare, in non-pan areas (area is moderately populated with numerous mahangu fields); 	
	Identify potential bird collision prone areas (i.e. habitats).	
	 Install bird flight diverters (BFD's) and anti-perching devices (APD's) to the transmission line along unique/sensitive habitats 	
	 Monitor all bird mortalities encountered under the transmission line. 	
	All wildlife and electrical infrastructure interactions must be reported to the	
	SHEW section.	
	 Remove and destroy all invasive alien plants encountered along the transmission line route. 	

ASPECT	MANAGEMENT AND MITIGATION MEASURES/COMMITMENTS	RESPONSIBLE PERSON
Water Resources	 Care must be taken to ensure that pollution of water does not occur. Naturally occurring water resources may not be used for any personal hygiene. Water may only be taken from a private or government property based on an agreement between the NamPower, contractor and custodian of the water source. 	Area superintendentProject ManagerContractor
Erosion	 Implement and maintain erosion control measures where applicable along the access route. Rehabilitate eroded areas 	Area superintendentProject ManagerContractor
Campsite Establishment	 In case there is a need for camping: NamPower/ Contractor must sign land permission form and agreement with land owners prior to commencement of work onsite. Adequate ablution facilities must be provided onsite in relation to the number of employees. Ablution facilities must not be located within 100m of any river, stream channel, pan, dam or borehole 	 Area superintendent Project Manager Contractor

ASPECT	MANAGEMENT AND MITIGATION MEASURES/COMMITMENTS	RESPONSIBLE PERSON		
	 Non-employees are not allowed to reside at the campsite. Fire extinguishers, first aid kits, assembly point, and emergency numbers must be available onsite. Waste must be managed in accordance with waste management requirements outlined in this EMP. 			
Manual and Mechanical Vegetation Removal	 Obtain a permit from the Ministry of Environment, Forestry and Tourism to remove protected trees as per the Forest Act No. 12 of 2001. Measures must be put in place to avoid erosion especially at rivers, stream channel crossings, and at places where existing erosion scars and dongas are encountered to avoid any further erosion. Avoid mechanical bush clearing in sensitive areas. Measures must be put in place to preserve the topsoil structure The disturbed soil must be levelled. Do not remove wood cut on site as this would affect the recycling of nutrients locally as well as lead to a potential industry in firewood targeting the better quality tree species. Where clearing is done near a river, the contractor/NamPower must ensure that no felled bushes/branches/shrubs are left behind in the riverbed. 	 Area superintendent Project Manager SHEW Contractor 		

ASPECT	MANAGEMENT AND MITIGATION MEASURES/COMMITMENTS	RESPONSIBLE PERSON
Site Rehabilitation (progressive and post rehabilitation)	 No burning of bush cleared materials is allowed onsite. Protected tree species, especially larger specimens, within the affected area i.e. 12m from centre line in either direction not expected to affect the transmission line could be avoided. Manual and mechanical vegetation removal should be done in accordance with NamPower Procedures. Avoid the cutting down of protected tree species [Forestry Ordinance No. 37 of 1952) not directly affecting the power lines during the line clearing operation. Progressive rehabilitation when construction or bush clearing work is in progress. Post construction rehabilitation must also be done. All materials, equipment and waste must be removed from site. A post construction audit within 1 week prior to the Contractor leaving site must be conducted. SHEW to sign site close off or take over certificate once remedial corrective actions have been implemented. 	 Area superintendent Project Manager SHEW Contractor

8 REPORTING, MONONITORING AND AUDITING

The environmental monitoring, inspections and audits must be conducted in line with legislation, supporting procedures and requirements of this plan. Monitoring, inspection and audit reports detailing the monitoring and audit results shall be prepared by the SHEW section and communicated to the Area Manager, Superintendent and Project Manager.

9 NON-COMPLIANCE AND CONFLICT MANAGEMENT PROCEDURES

The Area Superintendent, Project manager and Contractor shall ensure that the employees and external service providers comply with the requirements outlined in this EMP. In the event of non-compliance the following recommended process shall be followed:

- Non compliances will be identified during inspections or audits carried out by the SHEW Section and reported to the Area manager, Superintendent and Project Manager for corrective actions.
- Area Superintendent / Project Manager shall notify the responsible stakeholders about the non-compliance.
- Corrective and preventative actions must be implemented on an agreed timeframes.
- Area Superintendent / Project Manager to report back on how the non-conformances have been rectified.
- Follow up inspections/audits shall be conducted to assess whether the corrective and preventative actions were implemented effectively.

The contractor shall notify NamPower of the following:

- Conflicts arising with any landowner / representative and other stakeholders.
- Any special conditions requested by a landowner / representative.

NamPower has the right to stop all contractor's activities if it is found that a gross violation of the EMP is taking place.

10 RECORD KEEPING

Record keeping is important for the effective functioning and implementation of an EMP. EMP documentation must be kept in both the hard copy and electronic format for safe keeping. These must include:

- Copy of the Environmental Clearance Certificate
- A copy of an EMP
- EMP implementation action plan
- Induction records
- Resource use records i.e. water and fuel consumption
- Audit and Inspection reports

11 CONCLUSION

All management measures and legal requirements outlined in this EMP should be implemented in order to ensure environmental compliance by all parties undertaking the operational activities. This will ensure that potential negative impacts are identified, avoided or mitigated and positive impacts are enhanced.

12 ANNEXURES

Annexure 1: Areas of importance, with protected species potentially affected, along the Etunda-Ruacana 66kV transmission line.

[Direction: Etunda Substation north-westwards towards the Ruacana Substation]

Hotspot areas	Distance (km)	Area	Important species	Common names	Status	Aliens	Other important features	Importance ranking
	0 to 28.0	Etunda SS	Baikiaea plurijuga	Zambezi teak	F, LC	Cryptostegia grandiflora		Low
			Hyphaene petersiana	Makalani	F, LC			
			Schinziophyton rautanenii	Manketti	F, LC			
1	28.0 to 38.2	Ruacana SS	Sterculia africana	African star chestnut	F, LC			High

Annexure 2: Monitoring checklist to ensure that line inspections and general maintenance activities were conducted in accordance with guidelines – i.e. ecological best practices.

Activity: Protection of Ecology & Vegetation	Comp	liance
	Yes	No
Track discipline		
Evidence of new tracks		
Evidence of off-road driving		
Evidence of turnaround violations		
Evidence of oil spills		
Evidence of waste		
Evidence of litter		
Illegal collection/damage of flora		
Evidence of illegal plant collection		
Evidence of vehicle damage to plants		
Evidence of unauthorised people/vehicles		
Erosion		
Evidence of erosion along route		
Invasive alien plants		
Evidence of invasive alien plants along route - New		
Evidence of invasive alien plants along route - Existing		
New species		
Any new plants encountered – i.e. not previously observed		
Domestic stock/pets		
Domestic stock and/or pets encountered along route (Relevant to Protected Areas only)		
Bird mortalities		
Record all dead birds encountered below the line		

Annexure 3: Landowner permission form

Landowner Permission Form

Landowner name:	Contact number:		
Representative name:			
Farm name:	<u>-</u>		
Contractor:	_		
Representative name:	Contact number:		
General Notice This form is to be used prior to a contractor entering a landowner's property to commence			
any work related to the construction or maintenance of power-line structures and servitudes.			
The form must be completed by either the land	owner or his / her legal representative on		

Section A: Before activities commence

Activities to be undertaken on the property (completed by the contractor):

Signatures (prior to entry) Landowner/Representative Date		Contractor representation	- ve -
<u>-</u>	rom:	_	То:
Dates when access is needed:	<u> </u>		
Specific conditions to be met o	on the property (a	ns stipulated by the lando	wner):
Use of water resources Powerline erection Powerline refurbishment Trimming of vegetation Use of other infrastructure (please specify)		Camping Bush clearing Herbicide application Access road usage Rehabilitation	

Section B: Upon completion of work and prior to leaving the property

Remarks on compliance or misconduct (upon completion of activities):		
Issues still to be resolved upon completion of activities:

Landowner/Representative	Contractor representative	
Date	Date	

Annexure 4: Chance find procedure

Definition: The "chance finds" procedure covers the actions to be taken from the discovery of a heritage site or item, to its investigation and assessment by a trained archaeologist or other appropriately qualified person.

Compliance: The "chance finds" procedure is intended to ensure compliance with relevant provisions of the National Heritage Act (27 of 2004), especially Section 55 (4): "a person who discovers any archaeological object must as soon as practicable report the discovery to the Council". The procedure of reporting set out below must be observed so that heritage remains reported to the NHC are correctly identified in the field.

Procedure:

Action by person identifying archaeological or heritage material

- a) If operating machinery or equipment stop work
- b) Identify the site with flag tape
- c) Determine GPS position if possible
- d) Report findings to foreman

Action by foreman

- a) Report findings, site location and actions taken to superintendent
- b) Cease any works in immediate vicinity

Action by superintendent

- a) Visit site and determine whether work can proceed without damage to findings
- b) Determine and mark exclusion boundary
- c) Site location and details to be added to project GIS for field confirmation by archaeologist

Action by archaeologist

- a) Inspect site and confirm addition to project GIS
- b) Advise NHC and request written permission to remove findings from work area
