ADVERTISE

Rising Interest Rates

change spending priorities from non-essentials to necessities (like food) and debt repayment.

Namibia has not been exempt from the fast rising inflation and interest rates experienced around the world over the past 18 months, which weigh on private spending.

Since household consumption spending accounts for 78% of GDP, Nandago said it is bad news for overall economic growth.

According to GDP data for the first quarter of 2023, consumption spending is now feeling the lag effects of the high inflation and interest rate environment, with growth during this time period averaging a three-year low of -4.4%.

“We expect weak consumption spending to persist based on various economic indicators namely elevated inflation and interest rates, high unsecured credit uptake growth, high levels of indebtedness and residential property weakness,” Nandago emphasised.

She said load-shedding-related restrictions in South Africa, which is Namibia’s primary food importer, has kept food inflation high.

The FirstRand Namibia’s report anticipates a significant drop in spending activity considering that food and transportation account for 31% of Namibia’s inflation basket altogether.

The Bank of Namibia increased rates by a total of 400 basis points (bps) in just 17 months, making Namibia the country with the sharpest cycle of rate hikes in history.

Interest rates are currently 150bps higher than they were

before to the epidemic, at 7.75%.

Nandago stated that Namibian consumers are heavily indebted, with outstanding household debt standing at N\$65.8 billion and a debt-to-disposable income ratio of 86.0% for both bank and non-bank loans.

In line with a rise in the prime rate, she said the debt servicing to disposable income ratio increased slightly from 5.7% in 2021 to 6.2% in 2022.

“At this level of indebtedness, households are more susceptible to income shocks such as those from high interest rates and high prices, which is likely to substantially reduce consumer spending.”

The FB Housing Index continued to decline for the majority of 2022, averaging -2.8% in terms of both prices and transaction volumes.

“We attribute the weakness in the residential property market to the high inflation and high interest rate environment that has reduced consumer affordability,” Nandago said.

ADVERTISE

Middle To Low-Income

Meanwhile, the NHE Board Chairperson Toska Sem, said although housing provision remains a challenge, the state-owned company with its limited resources constantly finds innovative means to deliver quality and affordable houses with the available means.

Sem further said the market trends have changed, and the company wants to accommodate everyone who walks into its doors seeking a roof over their heads. He said this calls for the realigning of NHE's housing delivery strategies to the realities on the ground, for example, by providing the most basic shelter for those who are unable to afford fully completed houses with geysers, tiles, and cupboards.

According to her, the total value of this housing project totals N\$10 million. The execution of housing programs provides not only the houses but also much needed relief in terms of job opportunities and business development for the residents.

"I am informed that about 100 local jobs were created as part of this project and this is testament to our philosophy of giving back to the communities we operate in," she said.

The NHE is currently busy with new housing development projects in towns across the country that will see the company constructing 235 houses.

These towns are Okahao, with 70 houses, Omuthiya with 50 houses, Gobabis with 65 houses, Outapi with 26 houses, Ondangwa with 24 houses, Gobabis with 50, and in Windhoek NHE has an informal settlement upgrading programme underway.

Through the PPP model, NHE partners with private investors on a turnkey basis. Under this arrangement, NHE avails land for construction and the final products are sold to customers on the NHE's waiting list.
