

NAMIBIA 2011 POPULATION AND HOUSING

CENSUS INDICATORS

THE REPUBLIC OF NAMIBIA

PREFACE

The report presents the main results of the 2011 Namibia Population and Housing Census, which was undertaken in August 2011. The report provides a wide range of data on the characteristics of the population and on household and housing conditions. The population characteristics include spatial distribution, age and sex composition, marital status, education, literacy, economic activity, orphanhood and disability. The household and housing conditions include household size, housing amenities, ownership and the quality of housing.

This Main Report provides results after the processing and analysis of data at national, urban, rural and regional levels. Information for constituencies will be given in regional level analytical reports. Separate analytical reports will also be prepared for specific topics, including.

- Fertility and Marital status
- Household and Housing conditions
- Mortality
- Gender dimensions
- Education and Literacy
- Spatial distribution and Urbanization
- Migration
- Children and Youth
- Ageing population and the elderly
- People with disabilities

For further individual analysis and research work, the NSA will make available data in a variety of formats, including:

- Statistical tables
- Regional level reports
- Thematic maps
- Census database
- Up-dated master frame
- Enumeration area maps
