

maximising wildlife returns by minimising threats...

- **Potential trophy value** - the average trophy value for that species in the conservancy landscape
- trophy values vary depending on trophy quality, international recognition of the hunting operator and the hunting area
- **Potential other use value** - the average meat value for common species
- the average live sale value of each high value species (indicated with an *) [high value species are never used for meat]

monitoring numbers and trends for a healthy conservancy...

Current wildlife numbers and status

Species	Animals Seen 2014	Estimated population range	Wildlife Status		
			Count Trend	National Guideline	Desired Number
Elephant					
Gemsbok					
Giraffe					
Jackal					
Klipspringer					
Kudu					
Mtn. zebra					
Ostrich					
Springbok					
Steenbok					

Wildlife Status

Count trend – gives the species status in the conservancy based on game count trend data.

National guideline – gives the species status in the conservancy using national guidelines for the conservancy; for example, lions may cause local problems, but are of high value and are rare at landscape level.

Desired number – gives the species status in the conservancy based on what the conservancy would like to have.

dark green (abundant) – there should be less;
light green (common) – the desired number is reached;
yellow (uncommon) – there should be more;
light orange (rare) – there should be more than double;
dark orange (very rare) – there should be more than triple;
red (extinct) – the species needs to be reintroduced.

Locally rare species

Wildlife introductions

Wildlife mortalities

Annual rainfall

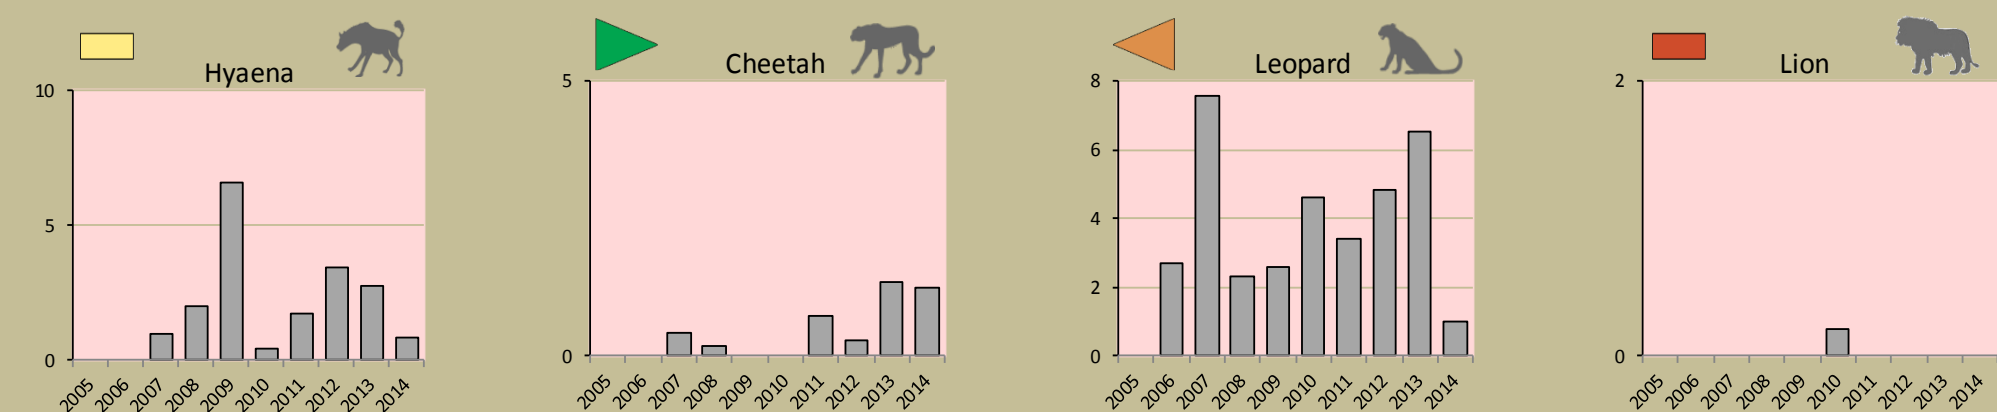

Annual game count

charts show the number of animals seen each year per 100 km driven during the game count status barometers reflect the general count trend over the last 5 years

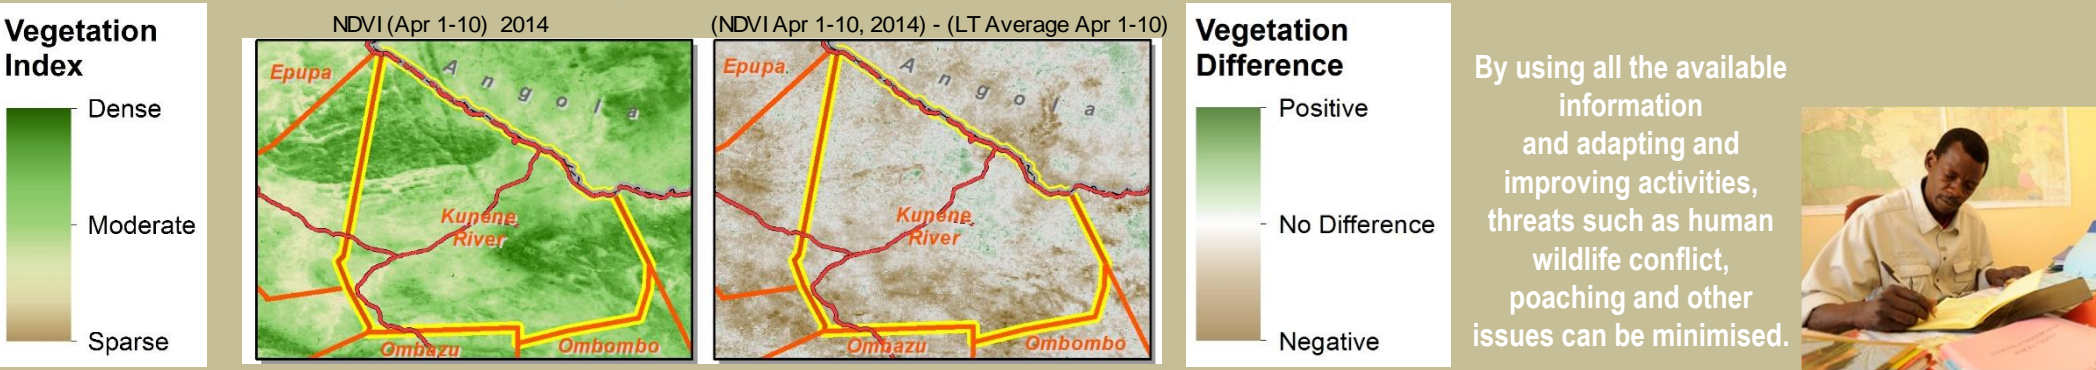

Predator monitoring

charts show the average number of animals seen per Event Book each year status barometers reflect the general sightings trend over the last 5 years

Vegetation monitoring

Green vegetation index (NDVI). Maps show vegetation cover in the first 10 days of April of the current year and the difference between the current year and the 10 year average (2001-2010)

Enabling wise conservancy governance...

Conservancy statistics

Date Registered:	October 2006
Members:	440
Size (square kilometres):	2764

Conservancy Governance

Number of management committee members:	13
Date of last AGM:	
Attendance at AGM:	Men: ; Women:
Date of next AGM:

Audit of the constitution	✗

Employment

Conservancy staff: Male	1
Female	1
Community game guards:	8
Community resource monitors:	0
Lodge staff: Male	9
Female	9

Benefits

Road Construction	
Traditional Authority	
Meat Distribution	
Kindergarden	

Conservancy Self Evaluation

How well does the conservancy consider it has performed in the past year?

Effectiveness of implementation	Poor	Fair	Good	Explanation of effectiveness rating
Game Utilisation and Management Plan				Because group patrol is weak
Zonation Plan				Because people move to tourism area
Natural Resource Plan				
Human Wildlife Conflict Plan				We do awareness to community and they adhere to what we tell them.
Tourism Plan				Because employees at campsite always leave their job this affect the tourism flow.
Sustainable Financial Plan				Because sometimes money is spent outside the budget line.
Benefit Distribution Plan				Meat is not enough due quote number.
Staff Plan				We were trained as per program
Assets Plan				
HIV/AIDS Plan				They train HIV/AIDS as per set program
Communication Plan				Sometimes people don't deliver message or send sms some delete sms without reading.
