maximising wildlife returns by minimising threats...

Conservancy status summary

Returns from natural resources in 2014

the chart shows the main sources of returns and values and their percentage of the total returns

Approximate Total Returns N\$

Two of the most significant returns for the conservancy: ✓ cash income to the conservancy to cover running costs and invest in developments

✓ employment to conservancy residents

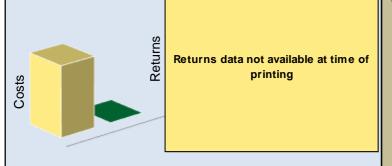

Conservancy	Conservancy income					
Employment	Private Sector					
Employment	Conservancy					

Cost of natural resource conflicts in 2014

Estimated human wildlife conflict cost	N\$ 23,630
Estimated poached high value species loss	N\$ 0
Total conflict cost estimate	N\$ 23,630

Natural resource cost-return ratio in 2014

the chart shows the approximate ratio of returns to costs

Human wildlife conflict

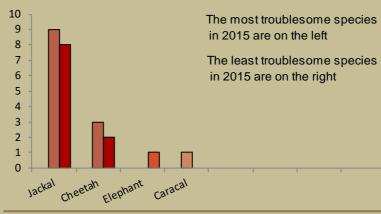

Human wildlife conflict trend

the chart shows the total number of incidents each year, subdivided by species, grouped as herbivores and predators

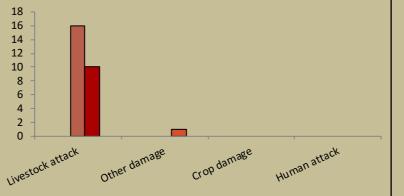

Most troublesome problem animals 2013-2015

the chart shows the number of incidents per species for the last 3 years; the darkest bar (on the right) indicates the current year for each species

Type of damage by problem animals 2013-2015

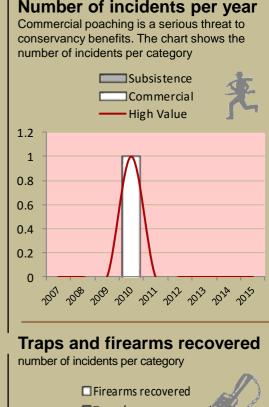

the chart shows the number of incidents per category for the last 3 years; the darkest bar (on the right) indicates the current year for each type

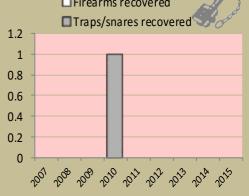

Wildlife removals - quota use and value

Quota			.5		Anim	als actually	y used in 2	015		Potential	Potential
Species	Total	Trophy	Other Use	Trophy	Own Use & Premium		Capture & Sale	Problem Animal	Total Use	Trophy Value N\$	Other use Value N\$

Poaching

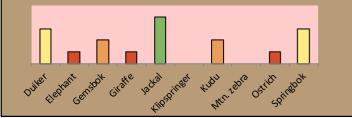

Arrests and convictions number of incidents per category

Wildlife status summary in 2015

Potential value estimates (N\$) for species are based on:

- · Potential trophy value the average trophy value for that species in the conservancy landscape
 - trophy values vary depending on trophy quality, international recognition of the hunting operator and the hunting area
- Potential other use value the average meat value for common species
- the average live sale value of each high value species (indicated with an *)[high value species are never used for meat]

Key to the status barometer

monitoring numbers and trends for a healthy conservancy...

Current wildlife numbers and status

	Animals	Estimated	v	/ildlife Statu	ıs
Species	Seen 2015	population range	Count Trend	National Guideline	Desired Status
Duiker					
Elephant					
Gemsbok					
Giraffe					
Jackal					
Klipspringer					
Kudu					
Mtn. zebra					
Ostrich					
Springbok					

Wildlife Status

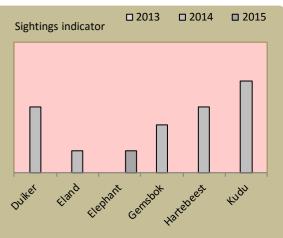

Count trend – gives the species status in the conservancy based on game count trend data.

National guideline – gives the species status in the conservancy using national guidelines for the conservancy; for example, lions may cause local problems, but are of high value and are rare at landscape level.

Desired number – gives the species status in the conservancy based on what the conservancy would like to have.

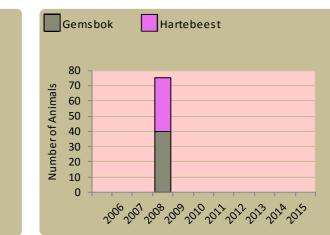

dark green (abundant) – there should be less;
light green (common) – the desired number is reached;
yellow (uncommon) – there should be more;
light orange (rare) – there should be more than double;
dark orange (very rare) – there should be more than triple;
red (extinct) – the species needs to be reintroduced.

Locally rare species

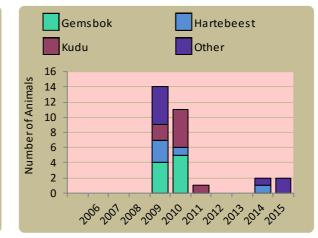

Locally rare and endangered species are not found very often in the conservancy and need special conservation attention.

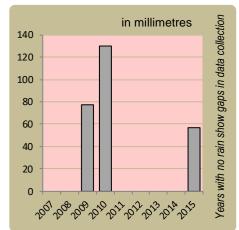

Wildlife introductions

Wildlife mortalities

Annual rainfall

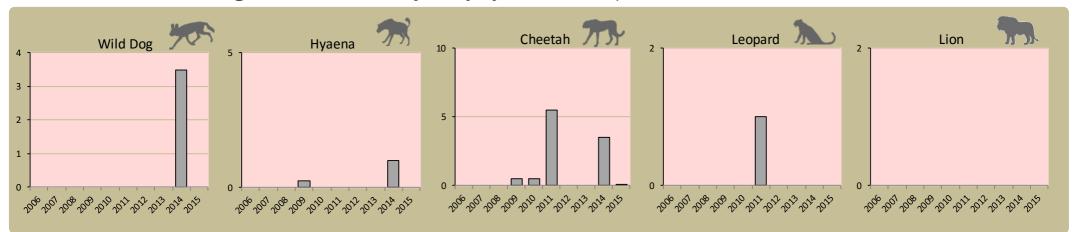

Annual game count currently not done

Predator monitoring

charts show the average number of animals seen per Event Book each year status barometers reflect the general sightings trend over the last 5 years

Wildlife provides a wide range of benefits. Some wildlife can cause conflicts, but all wildlife is of value to tourism, trophy hunting and a healthy environment.

By using all the available information and adapting and improving activities, threats such as human wildlife conflict, poaching and other issues can be minimised
