

maximising wildlife returns by minimising threats...

Conservancy status summary

Returns from natural resources in 2014

the chart shows the main sources of returns and values and their percentage of the total returns

Approximate Total Returns N\$ 3,717,770

Two of the most significant returns for the conservancy:

- ✓ cash income to the conservancy to cover running costs and invest in developments
- ✓ employment to conservancy residents

| | |
|--------------------|---------------|
| Conservancy income | N\$ 1,933,670 |
|--------------------|---------------|

| | | | |
|------------|----------------|----------|---------------|
| Employment | Private Sector | 85 staff | N\$ 1,582,000 |
| | Conservancy | 7 staff | N\$ 208,000 |

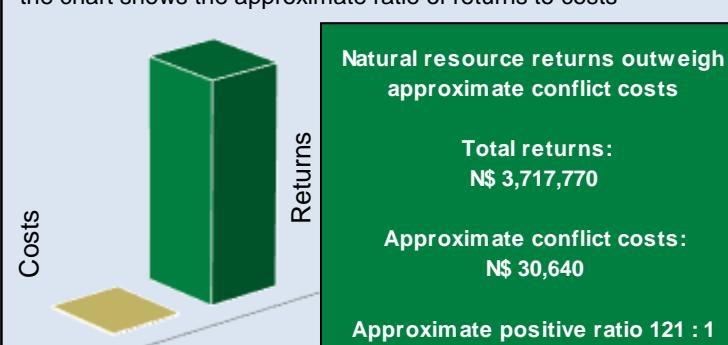

Cost of natural resource conflicts in 2014

estimates are based on average national values

| | |
|---|------------|
| Estimated human wildlife conflict cost | N\$ 30,640 |
| Estimated poached high value species loss | N\$ 0 |
| Total conflict cost estimate | N\$ 30,640 |

Natural resource cost-return ratio in 2014

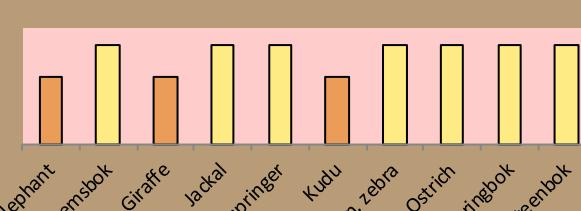

the chart shows the approximate ratio of returns to costs

Management performance in 2015

| Category | Performance |
|--------------------------------|-------------|
| 1 Adequate staffing | |
| 2 Adequate expenditure | |
| 3 Audit attendance | |
| 4 NR management plan | |
| 5 Zonation | |
| 6 Leadership | |
| 7 Display of material | |
| 8 Event Book modules | |
| 9 Event Book quality | |
| 10 Compliance | |
| 11 Game census | |
| 12 Reporting & adaptive m/ment | |
| 13 Law enforcement | |
| 14 Human Wildlife Conflict | |
| 15 Harvesting management | |
| 16 Sources of NR income | |
| 17 Benefits produced | |
| 18 Resource trends | |
| 19 Resource targets | |

Wildlife status summary in 2015

Key to the status barometer

Wildlife status

extinct very rare rare uncommon common abundant

weak/bad reasonable good

Success/threat flags

Conservancies reduce environmental costs while increasing environmental returns. Returns from wildlife can far outweigh human wildlife conflict costs.

Potential value estimates (N\$) for species are based on:

- Potential trophy value - the average trophy value for that species in the conservancy landscape
 - trophy values vary depending on trophy quality, international recognition of the hunting operator and the hunting area
- Potential other use value - the average meat value for common species
 - the average live sale value of each high value species (indicated with an *) [high value species are never used for meat]

Not all data or species are shown on this report; use your Event Book for more information

monitoring numbers and trends for a healthy conservancy...

Current wildlife numbers and status

| Species | Animals Seen 2015 | Estimated population range | Wildlife Status | | |
|--------------|-------------------|----------------------------|-----------------|--------------------|----------------|
| | | | Count Trend | National Guideline | Desired Status |
| Elephant | | | | | |
| Gemsbok | | | | | |
| Giraffe | | | | | |
| Jackal | | | | | |
| Klipspringer | | | | | |
| Kudu | | | | | |
| Mtn. zebra | | | | | |
| Ostrich | | | | | |
| Springbok | | | | | |
| Steenbok | | | | | |

Wildlife Status

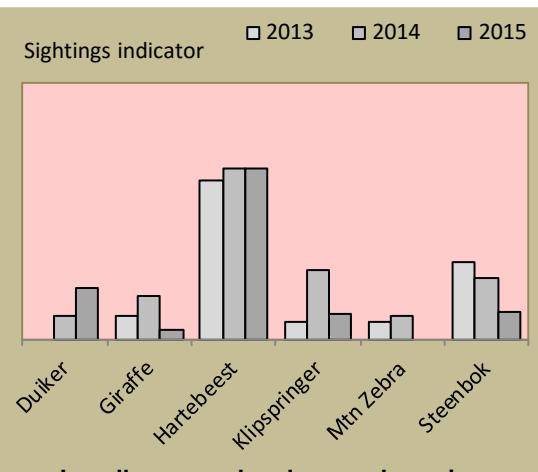

Count trend – gives the species status in the conservancy based on game count trend data.

National guideline – gives the species status in the conservancy using national guidelines for the conservancy; for example, lions may cause local problems, but are of high value and are rare at landscape level.

Desired number – gives the species status in the conservancy based on what the conservancy would like to have.

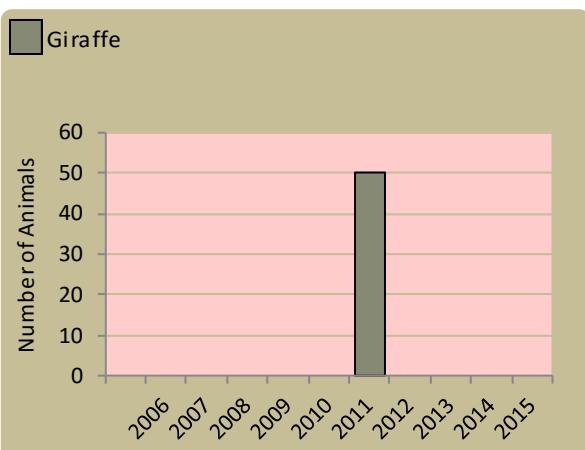

dark green (abundant) – there should be less;
light green (common) – the desired number is reached;
yellow (uncommon) – there should be more;
light orange (rare) – there should be more than double;
dark orange (very rare) – there should be more than triple;
red (extinct) – the species needs to be reintroduced.

Locally rare species

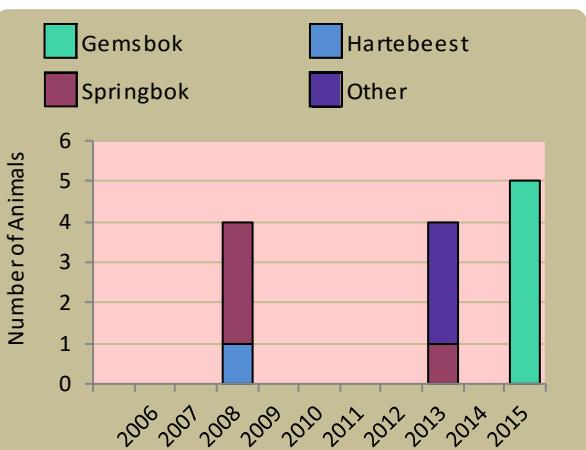

Locally rare and endangered species are not found very often in the conservancy and need special conservation attention.

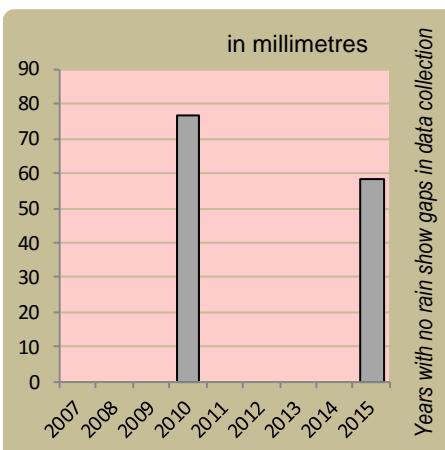

Wildlife introductions

Wildlife mortalities

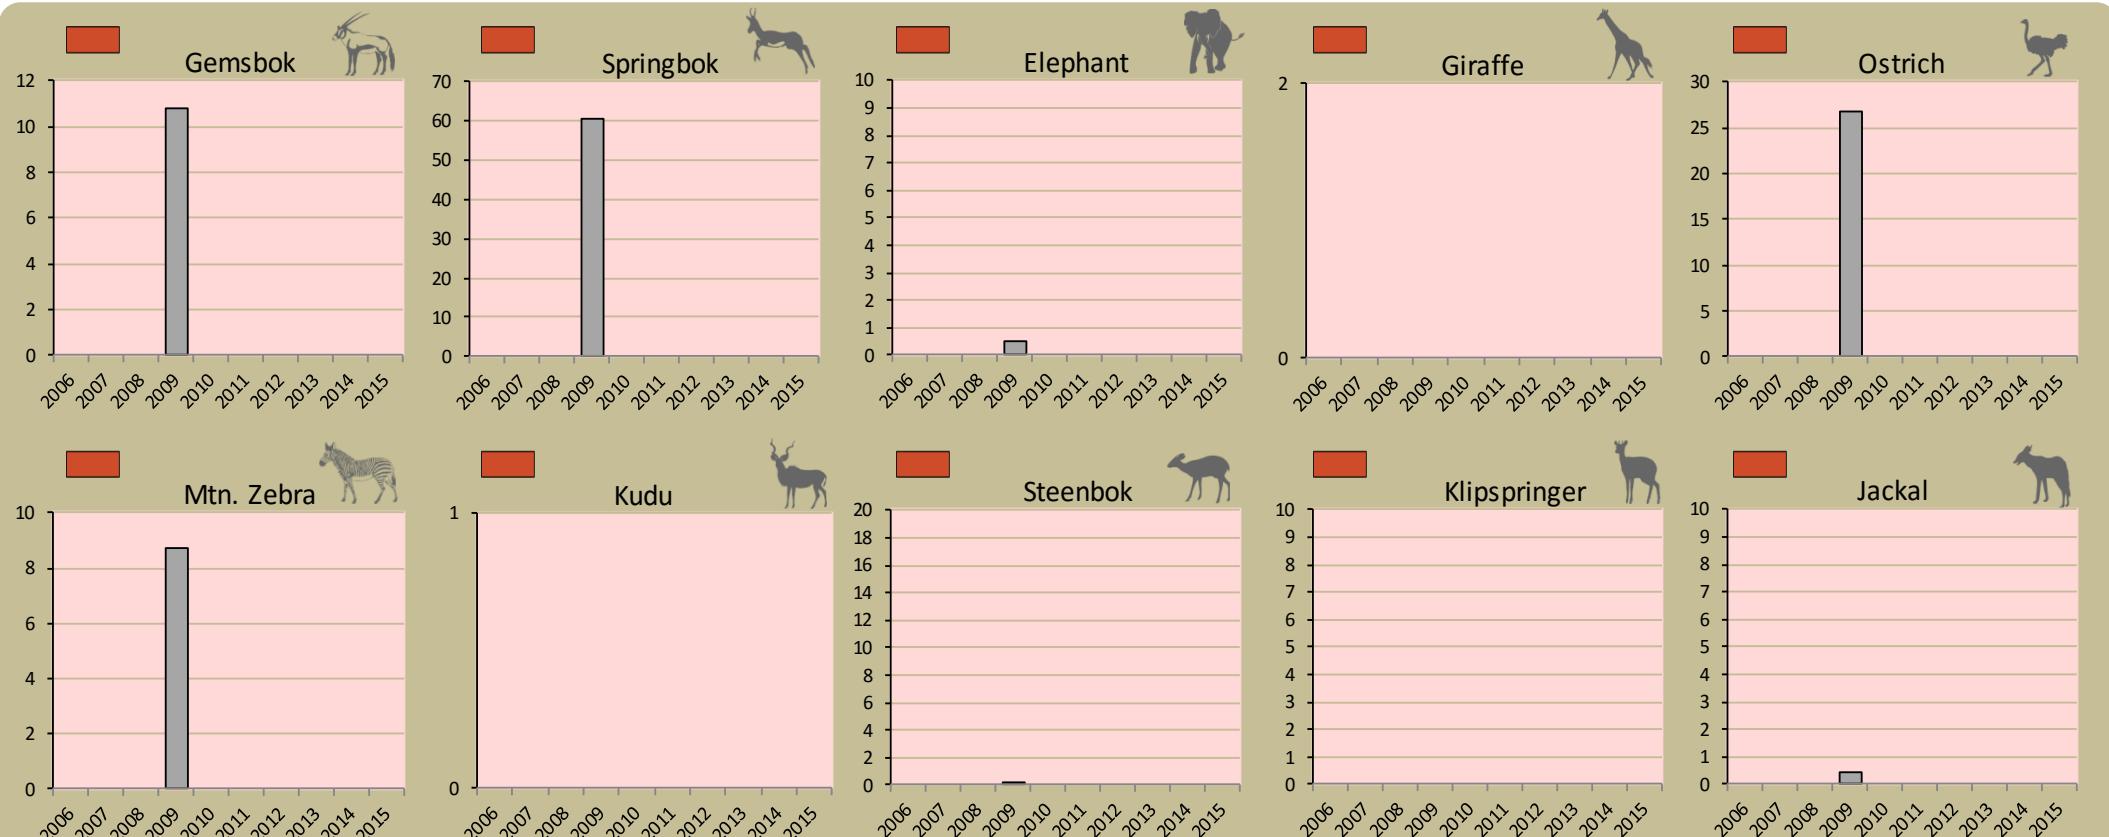

Annual rainfall

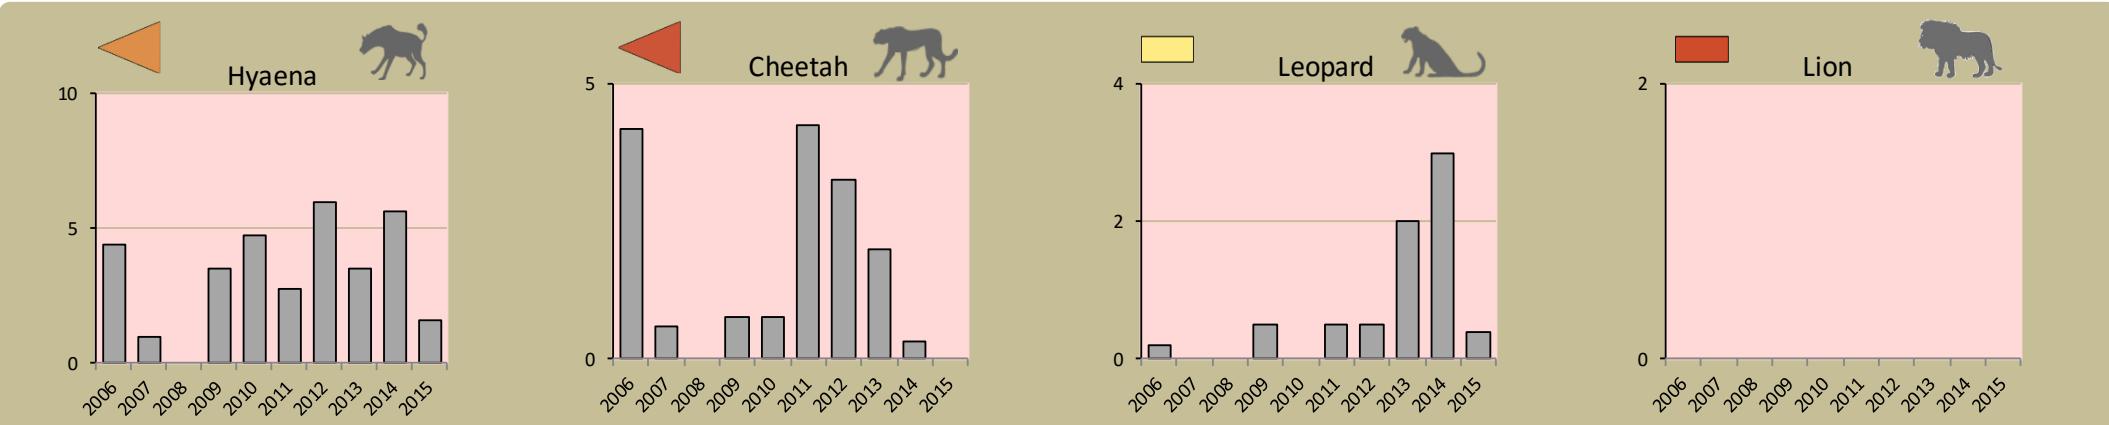

Annual game count

charts show the number of animals seen each year per 100 km driven during the game count status barometers reflect the general count trend over the last 5 years

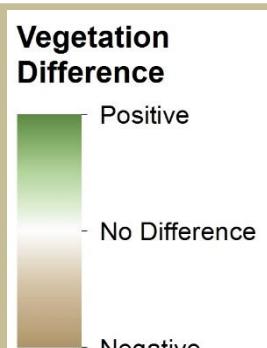

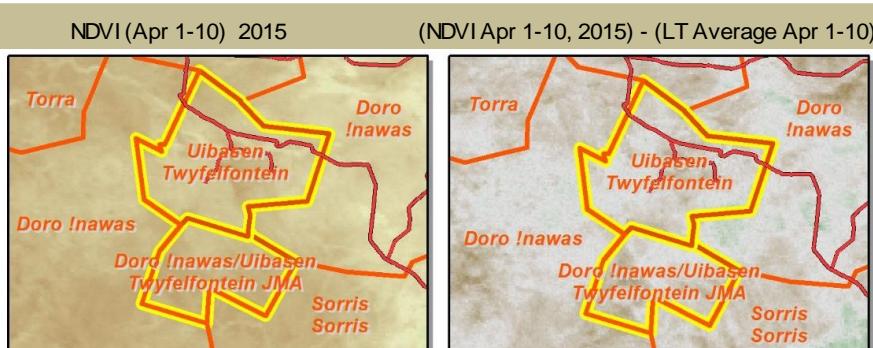

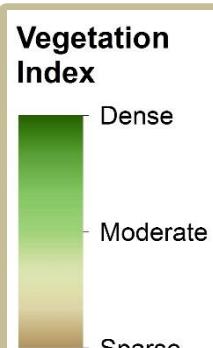

Predator monitoring

charts show the average number of animals seen per Event Book each year status barometers reflect the general sightings trend over the last 5 years

Vegetation monitoring

Green vegetation index (NDVI). Maps show vegetation cover in the first 10 days of April of the current year and the difference between the current year and the 10 year average (2001-2010)

By using all the available information and adapting and improving activities, threats such as human-wildlife conflict, poaching and other issues can be minimised.

Enabling wise conservancy governance...

Conservancy statistics

| | |
|----------------------------------|---------------|
| Date Registered: | December 1999 |
| Members: | 230 |
| Size (square kilometres): | 286 |

Conservancy Governance

| | |
|--|---------------------|
| Number of management committee members: | 8 |
| Date of last AGM: | |
| Attendance at AGM: | Men: ; Women: |
| Date of next AGM: | Fri, March 25, 2016 |
| Other important issues | |
| Financial report approved? | ✗ |
| Budget approved? | ✗ |
