

maximising wildlife returns by minimising threats...

Conservancy status summary

Returns from natural resources in 2016

the chart shows the main sources of returns and values and their percentage of the total returns

Approximate Total Returns N\$ 113,930

Two of the most significant returns for the conservancy:
 ✓ cash income to the conservancy to cover running costs and invest in developments
 ✓ employment to conservancy residents

Conservancy income		N\$ 113,930
Employment	Private Sector	
	Conservancy	8 staff N\$ 96,210

Cost of natural resource conflicts in 2016

estimates are based on average national values

Estimated human wildlife conflict cost	N\$ 389,050
Estimated poached high value species loss	N\$ 4,850
Total conflict cost estimate	N\$ 393,900

Natural resource cost-return ratio in 2016

the chart shows the approximate ratio of returns to costs

Management performance in 2016

Category	Performance
1 Adequate staffing	Good
2 Adequate expenditure	Good
3 Audit attendance	Good
4 NR management plan	Good
5 Zonation	Weak
6 Leadership	Good
7 Display of material	Good
8 Event Book modules	Good
9 Event Book quality	Good
10 Compliance	Good
11 Game census	Good
12 Reporting & adaptive m/ment	Good
13 Law enforcement	Good
14 Human Wildlife Conflict	Good
15 Harvesting management	Good
16 Sources of NR income	Good
17 Benefits produced	Good
18 Resource trends	Good
19 Resource targets	Weak

Wildlife status summary in 2016

Key to the status barometer

Human wildlife conflict

Human wildlife conflict trend

the chart shows the total number of incidents each year, subdivided by species, grouped as herbivores and predators

Most troublesome problem animals 2014-2016

the chart shows the number of incidents per species for the last 3 years; the darkest bar (on the right) indicates the current year for each species

Type of damage by problem animals 2014-2016

the chart shows the number of incidents per category for the last 3 years; the darkest bar (on the right) indicates the current year for each type

Poaching

Number of incidents per year

Commercial poaching is a serious threat to conservancy benefits. The chart shows the number of incidents per category

Traps and firearms recovered

number of incidents per category

Arrests and convictions

number of incidents per category

Wildlife removals – quota use and value

Species	Quota 2016			Animals actually used in 2016					Potential Trophy Value N\$	Potential Other use Value N\$	
	Total	Trophy	Other Use	Trophy	Own Use & Premium	Shoot & Sell	Capture & Sale	Problem Animal			Total Use
Baboon	5	5		3					3	700	
Cheetah	1	1								16,300	
Duiker	2	2								1,900	
Elephant*	1	1		1					1	260,500	
Hyaena	1	1								7,400	
B-f Impala	2	2								13,800	
Jackal	5	5								700	
Klipspringer	1	1		1					1	6,600	
Kudu*	10	6	4	2	2				4	8,100	19,400
Leopard	1	1		1					1	32,400	
Lion											
Ostrich	15	5	10							2,400	600
Springbok	40	15	25							2,900	520
Steenbok	7	7								1,600	
Warthog	1	1								2,900	
Mtn Zebra	6	3	3							7,400	3,320

Potential value estimates (N\$) for species are based on:

- Potential trophy value - the average trophy value for that species in the conservancy landscape - trophy values vary depending on trophy quality, international recognition of the hunting operator and the hunting area
- Potential other use value - the average meat value for common species - the average live sale value of each high value species (indicated with an *) [high value species are never used for meat]

Conservancies reduce environmental costs while increasing environmental returns. Returns from wildlife can far outweigh human wildlife conflict costs.

monitoring numbers and trends for a healthy conservancy...

Current wildlife numbers and status

Species	Animals Seen 2016	Estimated population range	Wildlife Status		
			Count Trend	National Guideline	Desired Status
Elephant			Dark Orange	Yellow	
Gemsbok			Dark Orange	Green	
Giraffe	3	5 - 10	Dark Orange	Yellow	
Jackal	2		Yellow	Green	
Klipspringer			Dark Orange	Green	
Kudu			Dark Orange	Yellow	
Mtn. zebra	7	11 - 20	Green	Green	
Ostrich	52	200 - 510	Green	Green	
Springbok	65	117 - 230	Orange	Green	
Steenbok	20	63 - 610	Orange	Green	

Wildlife Status

Count trend – gives the species status in the conservancy based on game count trend data.

National guideline – gives the species status in the conservancy using national guidelines for the conservancy; for example, lions may cause local problems, but are of high value and are rare at landscape level.

Desired number – gives the species status in the conservancy based on what the conservancy would like to have.

dark green (abundant) – there should be less;
light green (common) – the desired number is reached;
yellow (uncommon) – there should be more;
light orange (rare) – there should be more than double;
dark orange (very rare) – there should be more than triple;
red (extinct) – the species needs to be reintroduced.

Locally rare species

Sightings indicator □ 2014 □ 2015 □ 2016

Locally rare and endangered species are not found very often in the conservancy and need special conservation attention.

Wildlife introductions

Wildlife mortalities

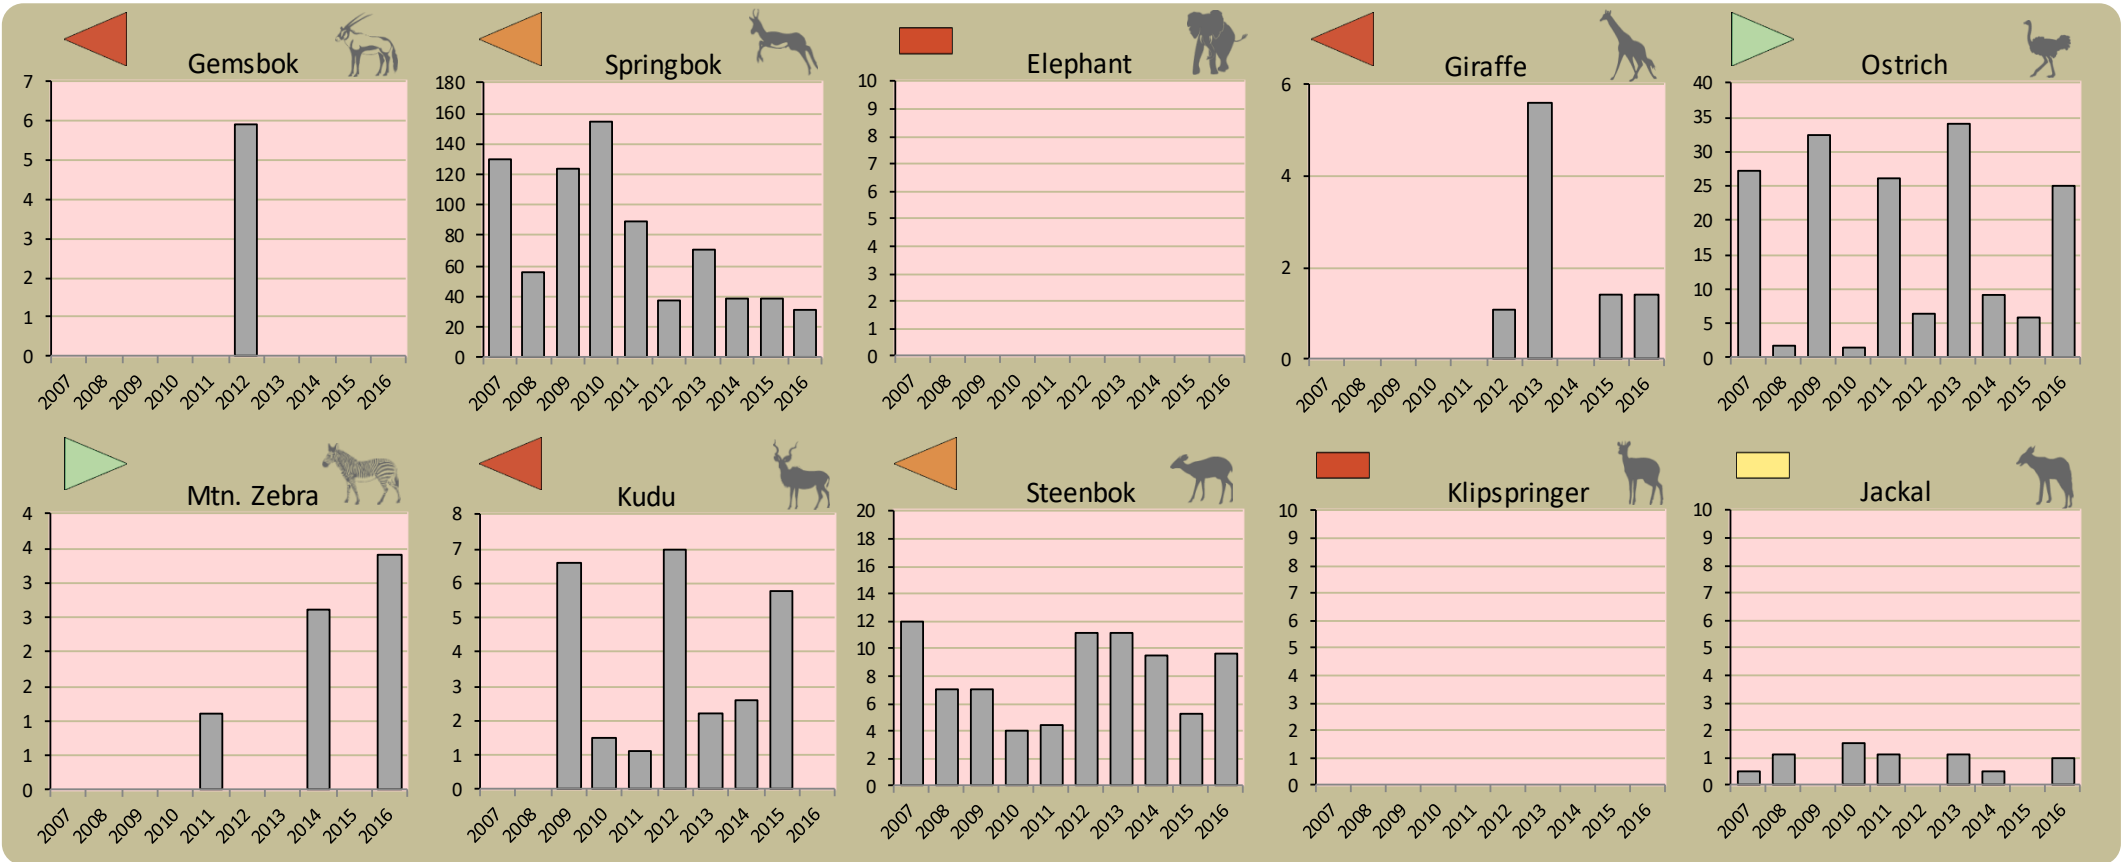

Annual rainfall

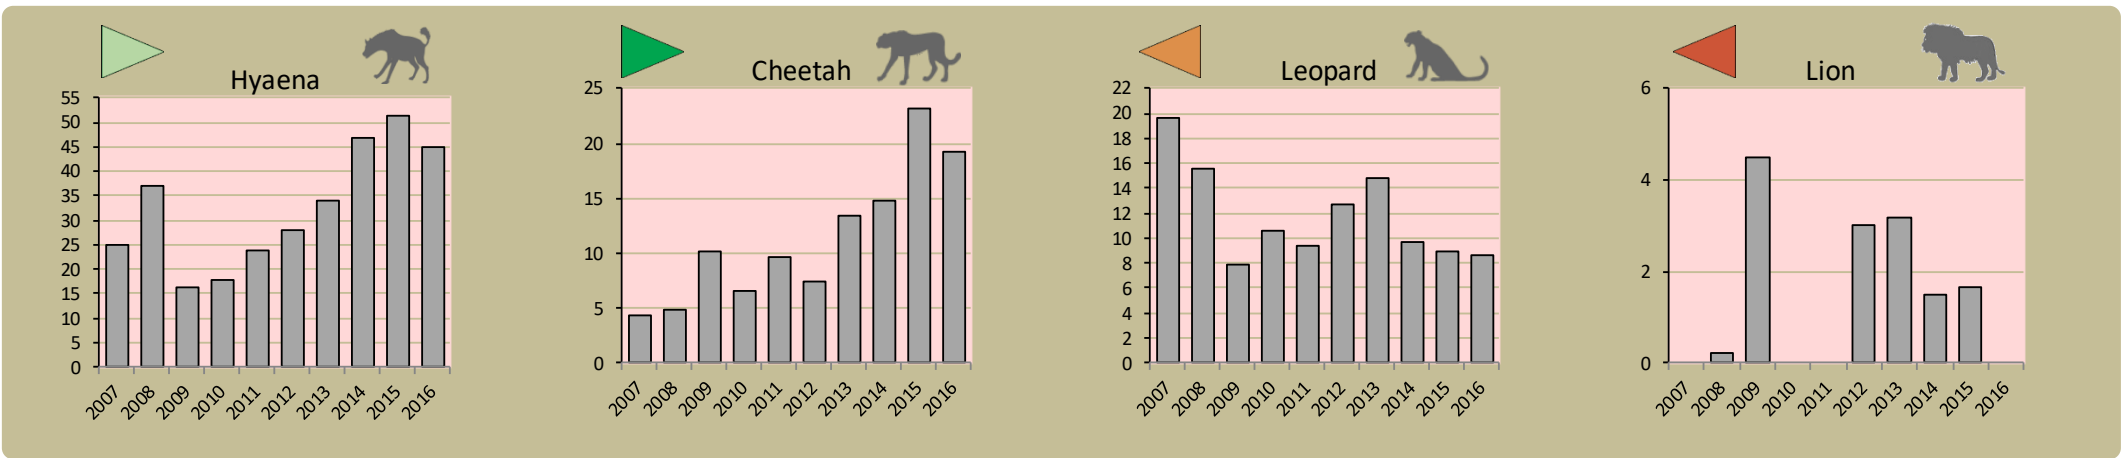

Annual game count

charts show the number of animals seen each year per 100 km driven during the game count status barometers reflect the general count trend over the last 5 years

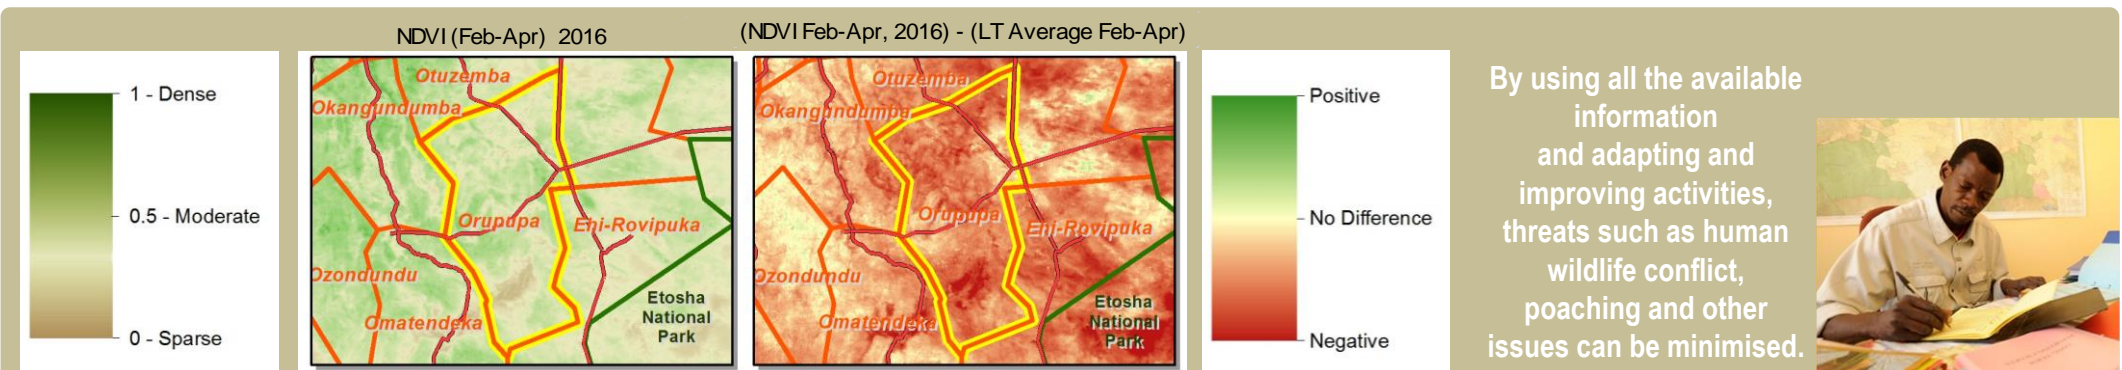

Predator monitoring

charts show the average number of animals seen per Event Book each year status barometers reflect the general sightings trend over the last 5 years

Vegetation monitoring

Green vegetation index (NDVI). Maps show vegetation cover during Feb-April of the current year and the difference between the current year and the long term average (2001-2015)

By using all the available information and adapting and improving activities, threats such as human wildlife conflict, poaching and other issues can be minimised.

Enabling wise conservancy governance...

Conservancy statistics

Date Registered:	March 2011
Population (2011 census):	1820
Size (square kilometres):	1234

Conservancy Governance

Number of management committee members:	14
Date of last AGM:	Fri, July 15, 2016
Attendance at AGM:	Men: 159; Women: 158
Date of next AGM:	Thu, July 6, 2017

	Social Benefits

Conservancy Self Evaluation

How well does the conservancy consider it has performed in the past year?

Effectiveness of implementation	Poor	Fair	Good	Explanation of effectiveness rating
Game Management and Utilisation				
Zonation Plan				
Benefit Distribution				
Human Wildlife Conflict Management			Good	So far we haven't had problems with implementation of these activities.
Sustainable Business and Financial Planning				
Tourism		Fair		Trophy hunting JV doing well but no tourism activities although we have attractive covers and sites.
Staff Management			Good	Although we do not have staff contracts in place, we are doing well.
Assets Management/Register		Fair		Although we are doing well we need a lot to do better.
HIV/AIDS			Good	We have two people visiting all villages on awareness, education and support.
Communication		Fair		We are trying our level best but we don't have transport to secure the process.
