Conservancy Status Summary & Natural Resource Report

maximising wildlife returns by minimising threats...

Conservancy status summary

Returns from natural resources in 2017 the chart shows the main sources of returns and values and their percentage of the total returns

Approximate Total Returns N\$

Two of the most significant returns for the conservancy:

- √ cash income to the conservancy to cover running costs and invest in developments
- √ employment to conservancy residents

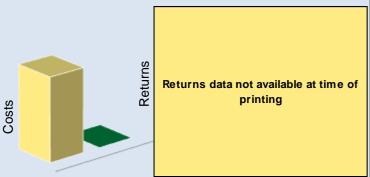

Conservancy i	N\$	
	Private Sector	
Employment -	Conservancy	

Cost of natural resource conflicts in 2017

	Total conflict cost estimate	N\$ 140,320			
	Estimated poached high value species loss	N\$ 0			
	Estimated human wildlife conflict cost	N\$ 140,320			
е	estimates are based on average national values				

Natural resource cost—return ratio in 2017

the chart shows the approximate ratio of returns to costs

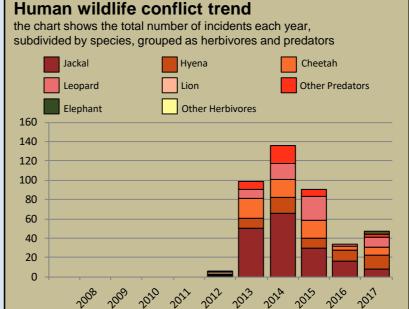

Management performance in 2017

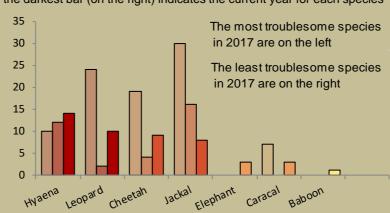

Human wildlife conflict

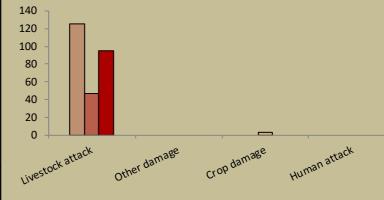

Most troublesome problem animals 2015-2017

the chart shows the number of incidents per species for the last 3 years; the darkest bar (on the right) indicates the current year for each species

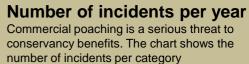

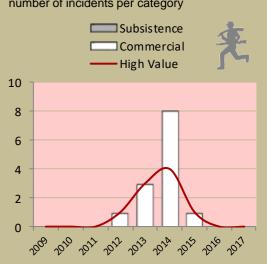

Type of damage by problem animals 2015-2017

the chart shows the number of incidents per category for the last 3 years; the darkest bar (on the right) indicates the current year for each type

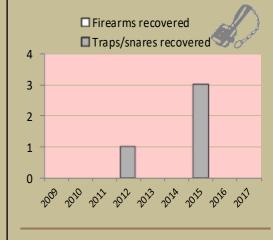

Poaching

Traps and firearms recovered

number of incidents per category

Arrests and convictions

number of incidents per category

Wildlife removals – quota use and value

Quota 2017		17	Animals actually used in 2017						- Potential	Potential	
Species	Total	Trophy	Other Use	Trophy	Own Use & Premium	Shoot & Sell	Capture & Sale	Problem Animal	Total Use	Trophy Value N\$	Other use Value N\$
Cheetah	1	1								14,000	
Jackal	5	5								500	
Klipspringer	1	1								5,200	
Kudu*	5	2	3							9,400	23,250
Ostrich	10	3	7		2				2	2,000	720
Springbok	15	4	11							2,700	624
Steenbok	1	1								3,500	

Potential value estimates (N\$) for species are based on:

weakness/

action needed

- Potential trophy value the average trophy value for that species in the conservancy landscape
- trophy values vary depending on trophy quality, international recognition of the hunting operator and the hunting area
- Potential other use value the average meat value for common species
- the average live sale value of each high value species (indicated with an *)[high value species are never used for meat]

Key to the status barometer

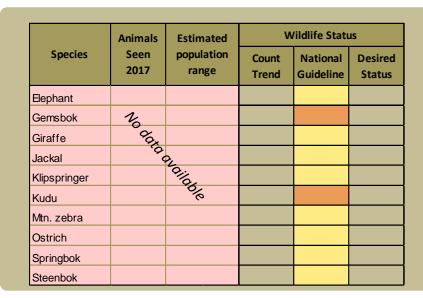

Success/threat flags Conservancies reduce environmental costs success/ while increasing environmental returns. benefit created

monitoring numbers and trends for a healthy conservancy...

Current wildlife numbers and status

Wildlife Status

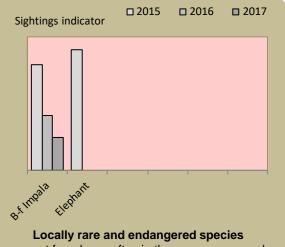

Count trend - gives the species status in the conservancy based on game count trend data.

Landscape status - gives the species status in the focal landscape; for example, lions may cause local problems, but are of high value and may be rare at landscape level.

Desired number - gives the species status in the conservancy based on what the conservancy would like to have.

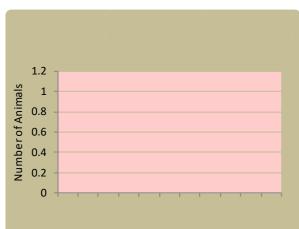

dark green (abundant) - there should be less; light green (common) – the desired number is reached; yellow (uncommon) - there should be more; **light orange** (rare) – there should be more than double; dark orange (very rare) - there should be more than triple; red (extinct) - the species needs to be reintroduced.

Locally rare species

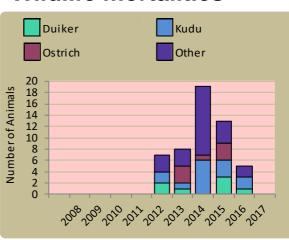

are not found very often in the conservancy and need special conservation attention.

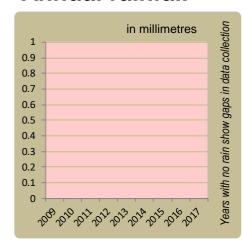

Wildlife introductions

Wildlife mortalities

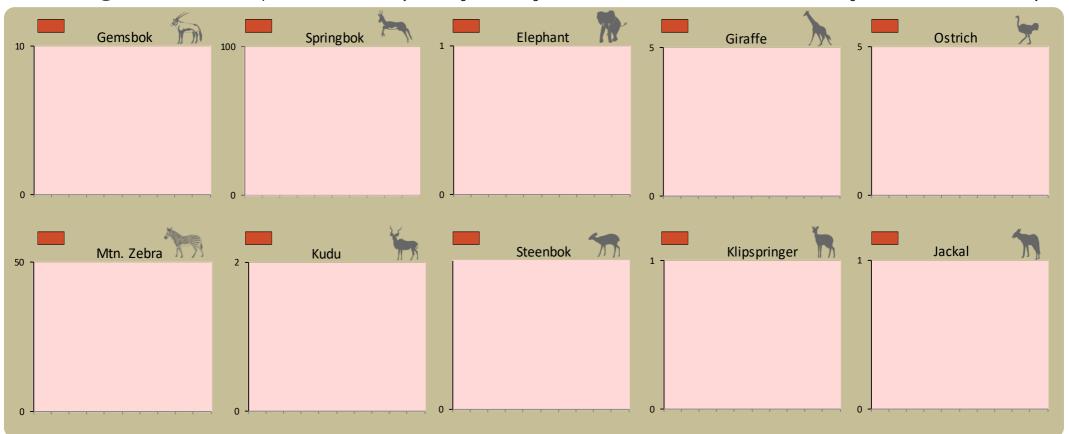

Annual rainfall

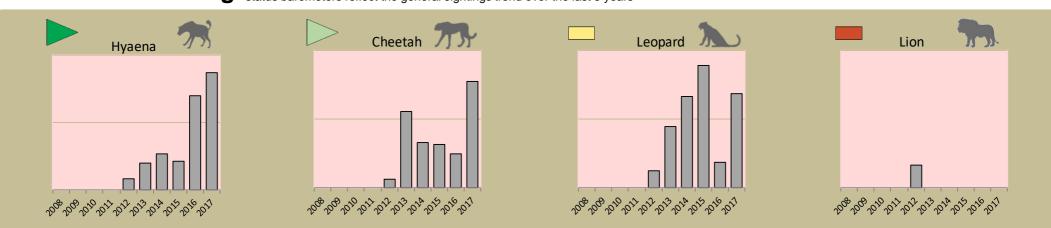

Annual game count

Charts show the number of animals seen each year per 100 km driven during the game count. As a point of reference the dashed horizontal line represents the combined 10 year average in Palmwag and Etendeka concessions. Status barometers reflect the general count trend over the last 5 years

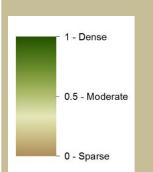

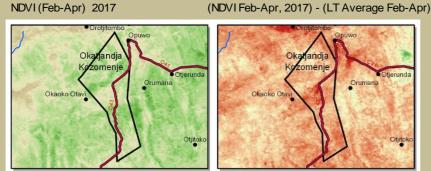

Predator monitoring

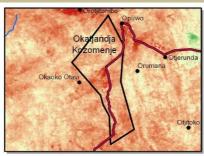

charts show the average number of animals seen per Event Book each year status barometers reflect the general sightings trend over the last 5 years

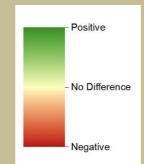

Green vegetation index (NDVI). Maps show vegetation cover during Feb-April of the current year **Vegetation monitoring** Green vegetation index (NDVI). Maps show vegetation cover during Feb-April of the and the difference between the current year and the long term average (2001-2016)

By using all the available information and adapting and improving activities, wildlife conflict, poaching and other issues can be minimised

Other important issues

Financial report approved?

Budget approved?

Work plan approved?

Chairperson's report approved?

Key Compliance Requirements

Was an AGM held?	♦
Were elections held?	✓ .
Is there a Benefit Distribution Plan?	×
Is there a Game Management and Utilisation Plan?	*
Was an Annual Financial Report produced?	✓

Employment

Conservancy staff: Male	6

Female 0

Community game guards:

Community resource monitors:

Lodge staff: Male 0

Female

Benefits

Cash	In Kind		
	Meat Distribution		

Conservancy Self Evaluation How well does the conservancy consider it has performed in the past year?

0

Effectiveness of implementation	Poor	Fair	Good	Prev. Year	Explanation of effectiveness rating
Game Management and Utilisation					Only anti-poaching activities such as patrols are carried out, but no management plan in place
Zonation Plan					Conservancy is zoned, but no plan in place yet
Benefit Distribution					No plan in place yet; only meat being distributed
Human Wildlife Conflict Management					No plan in place
Sustainable Business and Financial Planning					No income yet
Tourism					No tourism plan in place; no leasehold application
Staff Management					No training done yet
Assets Management/Register					No income to be able to buy assets yet
HIV/AIDS					Only awareness campaigns at the moment; no plan in place
Communication					Don't have a plan in place
