Annual Conservancy Audit Report Conservancy

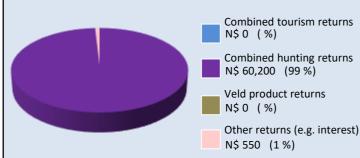

maximising wildlife returns by minimising threats...

Conservancy status summary

Returns from natural resources in 2017

the chart shows the main sources of returns and values and their percentage of the total returns

Approximate Total Returns N\$ 60,750

Two of the most significant returns for the conservancy: ✓ cash income to the conservancy to cover running costs and invest in developments

✓ employment to conservancy residents

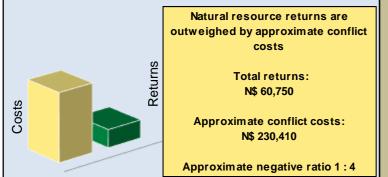

Conservancy	N\$ 60,750		
	Private Sector		
Employment	Conservancy	9 staff	N\$ 1,300

Cost of natural resource conflicts in 2017

Estimated human wildlife conflict cost	N\$ 230,410
Estimated poached high value species loss	N\$ 0
Total conflict cost estimate	N\$ 230,410

Natural resource cost-return ratio in 2017

the chart shows the approximate ratio of returns to costs

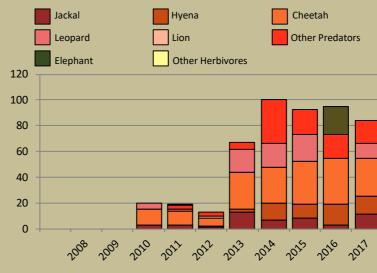

Management performance in 2017

Category	Performance			
1 Adequate staffing				
2 Adequate expenditure				
3 Audit attendance				
4 NR management plan				
5 Zonation				
6 Leadership				
7 Display of material				
8 Event Book modules				
9 Event Book quality				
10 Compliance				
11 Game census				
12 Reporting & adaptive m/ment				
13 Law enforcement				
14 Human Wildlife Conflict				
15 Harvesting management				
16 Sources of NR income				
17 Benefits produced				
18 Resource trends				
19 Resource targets				

Human wildlife conflict

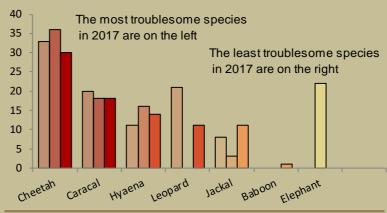

Human wildlife conflict trend

the chart shows the total number of incidents each year, subdivided by species, grouped as herbivores and predators

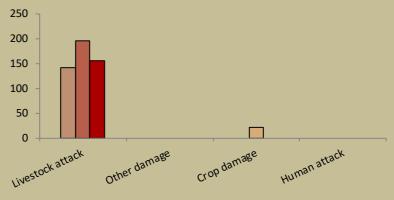

Most troublesome problem animals 2015-2017

the chart shows the number of incidents per species for the last 3 years; the darkest bar (on the right) indicates the current year for each species

Type of damage by problem animals 2015-2017

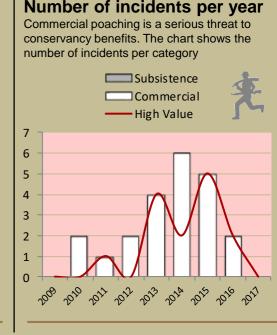

the chart shows the number of incidents per category for the last 3 years; the darkest bar (on the right) indicates the current year for each type

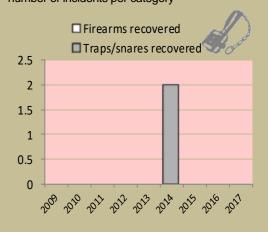

Wildlife removals - quota use and value

		Quota 201	17		Anim	Animals actually used in 2017			- Potential	Potential	
Species	Total	Trophy	Other Use	Trophy	Own Use & Premium	Shoot & Sell	Capture & Sale	Problem Animal	Total Use	Trophy Value N\$	Other use Value N\$
Baboon	5	5								600	
Cheetah	1	1								14,000	
Duiker	2	2								2,400	
Elephant*	0.167	0.167		1					1	273,600	
Jackal	5	5								500	
Klipspringer	1	1								5,200	
Kudu*	12	4	8		1				1	9,400	62,000
Leopard	0.33	0.33								32,900	
Ostrich	25	4	21		3				3	2,000	720
Springbok	35	5	30	1	18				19	2,700	624
Steenbok	2	2								3,500	

Poaching

Traps and firearms recovered number of incidents per category

Arrests and convictions number of incidents per category

Arrests Convictions Convictio

Wildlife status summary in 2017

tiente cension Grotte Isode Isode tubu NHULEDIO OSTICIO Spineson Steenton

Potential value estimates (N\$) for species are based on:

• Potential trophy value - the average trophy value for that species in the conservancy landscape

- trophy values vary depending on trophy quality, international recognition of the hunting operator and the hunting area

Potential other use value - the average meat value for common species

- the average live sale value of each high value species (indicated with an *)[high value species are never used for meat]

Key to the status barometer

monitoring numbers and trends for a healthy conservancy...

Current wildlife numbers and status

	Animals	Estimated	N	Wildlife Status			
Species	Seen 2017	population range	Count Trend	National Guideline	Desired Status		
Elephant							
Gemsbok							
Giraffe							
Jackal	1						
Klipspringer							
Kudu	1	4 - 20					
Mtn. zebra							
Ostrich	14	47 - 70					
Springbok	157	477 - 1280					
Steenbok	9	30 - 310					

Wildlife Status

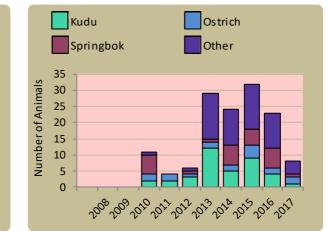

Count trend – gives the species status in the conservancy based on game count trend data.

Landscape status– gives the species status in the focal landscape; for example, lions may cause local problems, but are of high value and may be rare at landscape level.

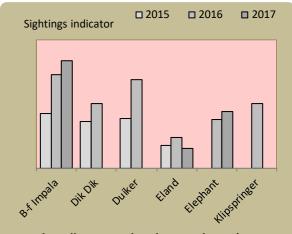

Desired number – gives the species status in the conservancy based on what the conservancy would like to have.

dark green (abundant) – there should be less;
light green (common) – the desired number is reached;
yellow (uncommon) – there should be more;
light orange (rare) – there should be more than double;
dark orange (very rare) – there should be more than triple;
red (extinct) – the species needs to be reintroduced.

Wildlife mortalities

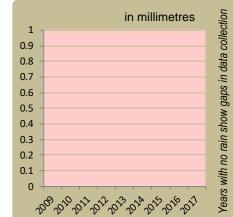

Locally rare species

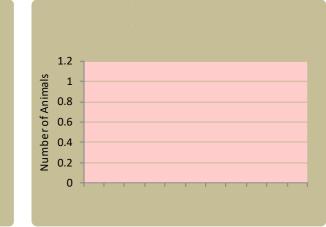

Locally rare and endangered species are not found very often in the conservancy and need special conservation attention.

Annual rainfall

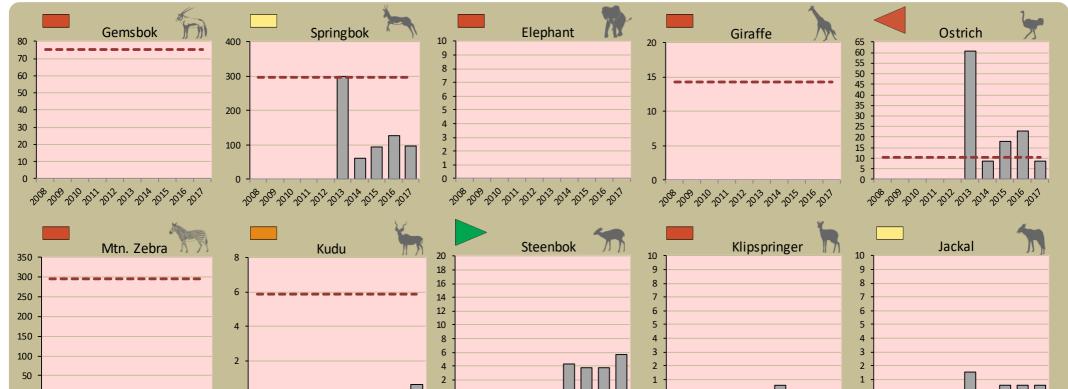

Annual game count

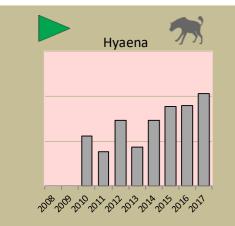

t Charts show the number of animals seen each year per 100 km driven during the game count. As a point of reference the dashed horizontal line represents the combined 10 year average in Palmwag and Etendeka concessions. Status barometers reflect the general count trend over the last 5 years

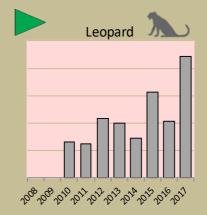

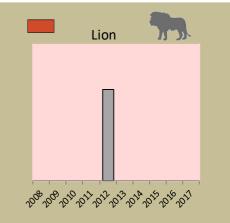

Predator monitoring

charts show the average number of animals seen per Event Book each year status barometers reflect the general sightings trend over the last 5 years

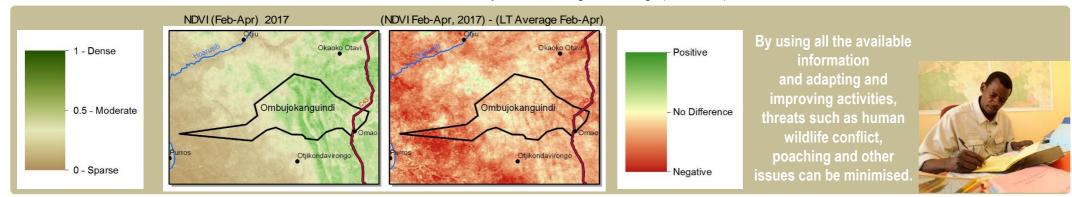

Vegetation monitoring

Green vegetation index (NDVI). Maps show vegetation cover during Feb-April of the current year and the difference between the current year and the long term average (2001-2016)
