Ongongo Conservancy Status Summary & Natural Resource Report

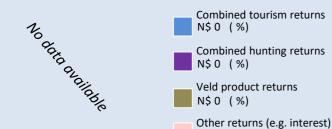

maximising wildlife returns by minimising threats...

Conservancy status summary

the chart shows the main sources of returns and values and their percentage of the total returns

Returns from natural resources in 2017

Approximate Total Returns N\$

Two of the most significant returns for the conservancy:

- √ cash income to the conservancy to cover running costs and invest in developments
- √ employment to conservancy residents

Conservancy	N\$	
Employment	Private Sector	
	Conservancy	

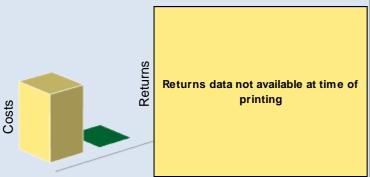

Cost of natural resource conflicts in 2017

estimates are based on average national values

Total conflict cost estimate	N\$ 112,250
Estimated poached high value species loss	N\$ 0
Estimated human wildlife conflict cost	N\$ 112,250

Natural resource cost—return ratio in 2017

the chart shows the approximate ratio of returns to costs

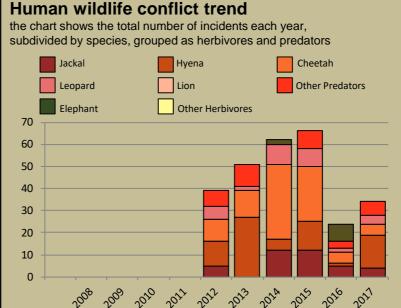

Management performance in 2017

Category	Performance				
1 Adequate staffing					
2 Adequate expenditure					
3 Audit attendance					
4 NR management plan					
5 Zonation					
6 Leadership					
7 Display of material					
8 Event Book modules					
9 Event Book quality					
10 Compliance					
11 Game census					
12 Reporting & adaptive m/ment					
13 Law enforcement					
14 Human Wildlife Conflict					
15 Harvesting management					
16 Sources of NR income					
17 Benefits produced					
18 Resource trends					
19 Resource targets					

Wildlife status summary in 2017

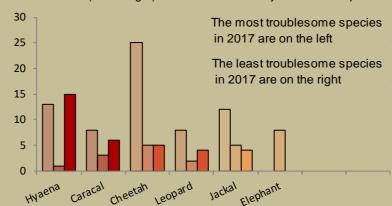

Human wildlife conflict

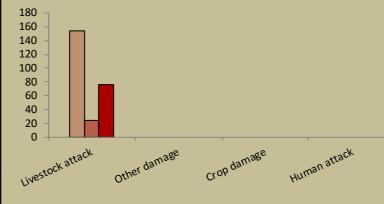

Most troublesome problem animals 2015-2017

the chart shows the number of incidents per species for the last 3 years; the darkest bar (on the right) indicates the current year for each species

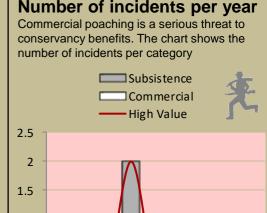

Type of damage by problem animals 2015-2017

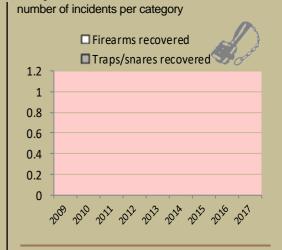

the chart shows the number of incidents per category for the last 3 years; the darkest bar (on the right) indicates the current year for each type

Poaching

Arrests and convictions

number of incidents per category

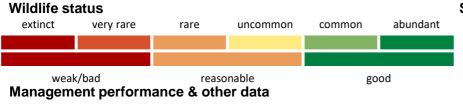

Wildlife removals – quota use and value

		Quota 2017			Animals actually used in 2017						Potential
Species	Total	Trophy	Other Use	Trophy	Own Use & Premium	Shoot & Sell	Capture & Sale	Problem Animal	Total Use	- Potential Trophy Value N\$	Other use Value N\$
Baboon	5	5								600	
Caracal	1	1								2,400	
Cheetah	1	1								14,000	
Duiker	1	1								2,400	
Jackal	5	5								500	
Klipspringer	1	1								5,200	
Kudu*	3	2	1							9,400	7,750
Ostrich	6	2	4							2,000	720
Springbok	12	4	8							2,700	624
Steenbok	1	1								3,500	
Mtn Zebra	10	4	6							5,600	3,984

Potential value estimates (N\$) for species are based on:

- Potential trophy value the average trophy value for that species in the conservancy landscape
- trophy values vary depending on trophy quality, international recognition of the hunting operator and the hunting area
- Potential other use value the average meat value for common species
- the average live sale value of each high value species (indicated with an *)[high value species are never used for meat]

Key to the status barometer

Success/threat flags

action needed

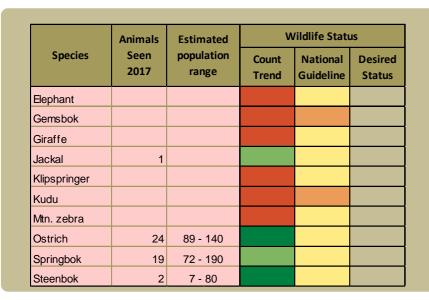

Conservancies reduce environmental costs while increasing environmental returns. Returns from wildlife can far outweigh human wildlife conflict costs.

Not all data or species are shown on this report; use your Event Book for more information

monitoring numbers and trends for a healthy conservancy...

Current wildlife numbers and status

Wildlife Status

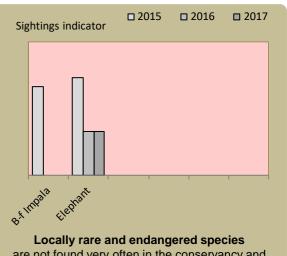

Count trend - gives the species status in the conservancy based on game count trend data.

Landscape status- gives the species status in the focal landscape; for example, lions may cause local problems, but are of high value and may be rare at landscape level.

Desired number – gives the species status in the conservancy based on what the conservancy would like to have.

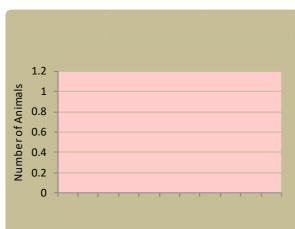

dark green (abundant) - there should be less; light green (common) – the desired number is reached; yellow (uncommon) - there should be more; **light orange** (rare) – there should be more than double; dark orange (very rare) - there should be more than triple; red (extinct) - the species needs to be reintroduced.

Locally rare species

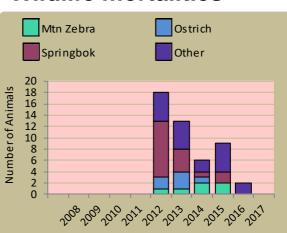

are not found very often in the conservancy and need special conservation attention.

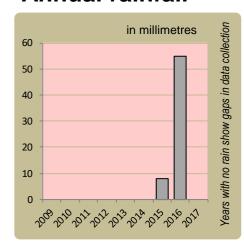

Wildlife introductions

Wildlife mortalities

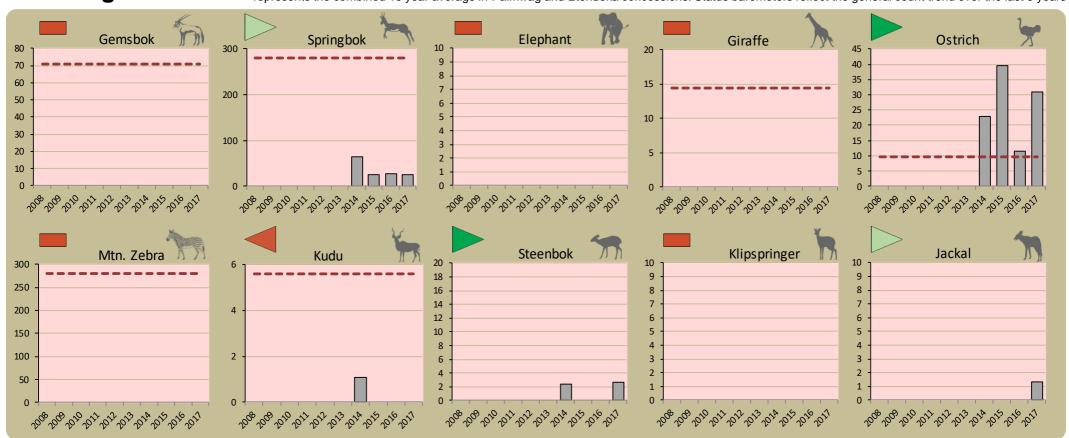

Annual rainfall

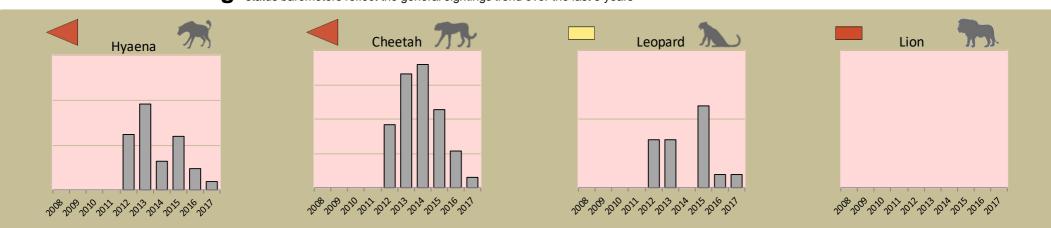

Annual game count

Charts show the number of animals seen each year per 100 km driven during the game count. As a point of reference the dashed horizontal line represents the combined 10 year average in Palmwag and Etendeka concessions. Status barometers reflect the general count trend over the last 5 years

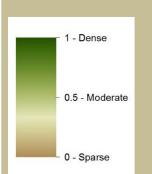

Predator monitoring

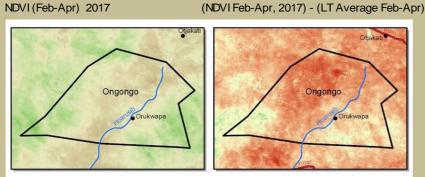

charts show the average number of animals seen per Event Book each year status barometers reflect the general sightings trend over the last 5 years

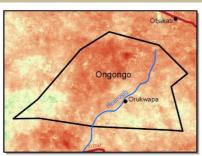

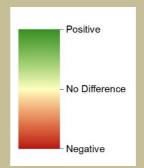

Vegetation monitoring

Green vegetation index (NDVI). Maps show vegetation cover during Feb-April of the current year and the difference between the current year and the long term average (2001-2016)

By using all the available information and adapting and improving activities, wildlife conflict, poaching and other issues can be minimised

Benefits

Cash	In Kind
	Meat Distribution

Conservancy Self Evaluation How well does the conservancy consider it has performed in the past year?

Effectiveness of implementation	Poor	Fair	Good	Prev. Year	Explanation of effectiveness rating
Game Management and Utilisation					No plan in place
Zonation Plan					Farmers don't adhere to areas designated for specific land use
Benefit Distribution					No other benefits were distributed
Human Wildlife Conflict Management					No plan in place
Sustainable Business and Financial Planning					No income yet
Tourism					No tourism plan in place, but leasehold for campsite has been obtained
Staff Management					No training given for last year
Assets Management/Register					No income to buy assets
HIV/AIDS					No plan in place
Communication					No plan in place
