Annual Conservancy Audit Report Audit Report

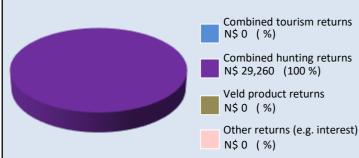

maximising wildlife returns by minimising threats...

Conservancy status summary

Returns from natural resources in 2017

the chart shows the main sources of returns and values and their percentage of the total returns

Approximate Total Returns N\$ 29,260

Two of the most significant returns for the conservancy: ✓ cash income to the conservancy to cover running costs and invest in developments

✓ employment to conservancy residents

Conservancy	N\$ 29,260		
	Private Sector		
Employment	Conservancy	6 staff	N\$ 12.000

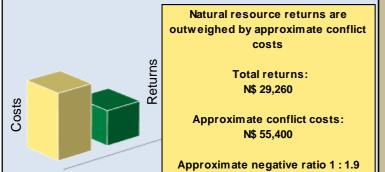

Cost of natural resource conflicts in 2017

estimates are based on	average national values
------------------------	-------------------------

Estimated human wildlife conflict cost	N\$ 55,400
Estimated poached high value species loss	N\$ 0
Total conflict cost estimate	N\$ 55,400

Natural resource cost-return ratio in 2017

the chart shows the approximate ratio of returns to costs

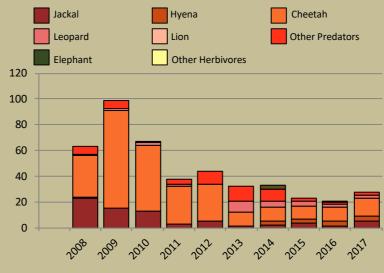

Management performance in 2017

	Category	Pe	rformance
1.	Adequate staffing		
2	Adequate expenditure		
3	Audit attendance

Human wildlife conflict

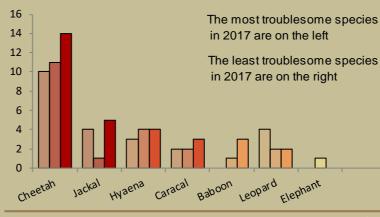

Human wildlife conflict trend

the chart shows the total number of incidents each year, subdivided by species, grouped as herbivores and predators

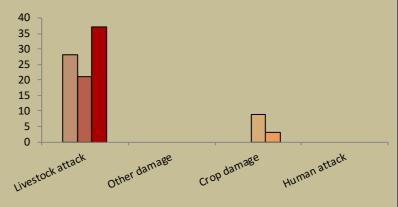

Most troublesome problem animals 2015-2017

the chart shows the number of incidents per species for the last 3 years; the darkest bar (on the right) indicates the current year for each species

Type of damage by problem animals 2015-2017

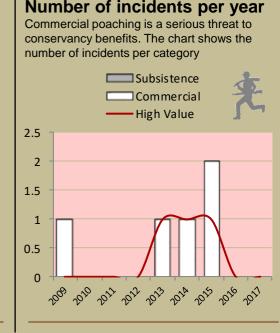

the chart shows the number of incidents per category for the last 3 years; the darkest bar (on the right) indicates the current year for each type

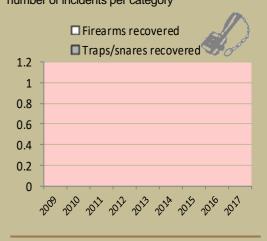

Wildlife removals - quota use and value

		Quota 201	17	Animals actually used in 2017			Potential	Potential				
Species	Total	Trophy	Other Use	Trophy	Own Use & Premium	Shoot & Sell	Capture & Sale	Problem Animal	Total Use	Trophy Value N\$	Other use Value N\$	
Baboon	5	5								600		
Caracal	1	1								2,400		
Cheetah	1	1								14,000		
Elephant*	0.167	0.167								273,600		
Gemsbok	2	2								4,200		
Jackal	5	5								500		
Klipspringer	2	2								5,200		
Kudu*	18	6	12		4				4	9,400	93,000	
Leopard	0.33	0.33								32,900		
Ostrich	8	2	6		2				2	2,000	720	
Springbok	45	10	35		23				23	2,700	624	
Steenbok	3	3								3,500		
Mtn Zebra	10	5	5							5,600	3,984	

Poaching

Traps and firearms recovered number of incidents per category

Arrests and convictions number of incidents per category

Wildlife status summary in 2017

tientant Genstot Grate Jackal with the wind care spinstot creentot

Potential value estimates (N\$) for species are based on:

· Potential trophy value - the average trophy value for that species in the conservancy landscape

- trophy values vary depending on trophy quality, international recognition of the hunting operator and the hunting area

- · Potential other use value the average meat value for common species
- the average live sale value of each high value species (indicated with an *)[high value species are never used for meat]

Key to the status barometer

monitoring numbers and trends for a healthy conservancy...

Current wildlife numbers and status

	Animals	Estimated population range	v	/ildlife Statu	ıs
Species	Seen 2017		Count Trend	National Guideline	Desired Status
Elephant					
Gemsbok					
Giraffe					
Jackal					
Klipspringer					
Kudu					
Mtn. zebra					
Ostrich	18	28 - 40			
Springbok	173	265 - 710			
Steenbok					

Wildlife Status

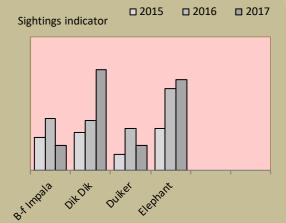

Count trend - gives the species status in the conservancy based on game count trend data.

Landscape status- gives the species status in the focal landscape; for example, lions may cause local problems, but are of high value and may be rare at landscape level.

Desired number - gives the species status in the conservancy based on what the conservancy would like to have.

dark green (abundant) - there should be less; light green (common) - the desired number is reached; yellow (uncommon) - there should be more; light orange (rare) – there should be more than double; dark orange (very rare) - there should be more than triple; red (extinct) - the species needs to be reintroduced.

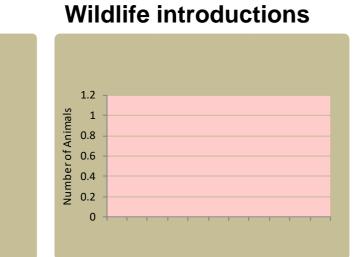

Locally rare species

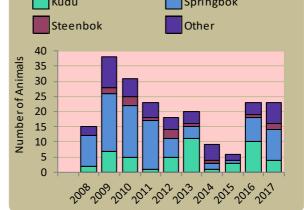

Locally rare and endangered species are not found very often in the conservancy and need special conservation attention.

Annual game count

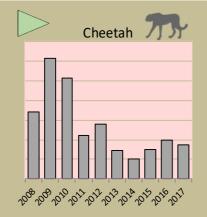

Charts show the number of animals seen each year per 100 km driven during the game count. As a point of reference the dashed horizontal line represents the combined 10 year average in Palmwag and Etendeka concessions. Status barometers reflect the general count trend over the last 5 years

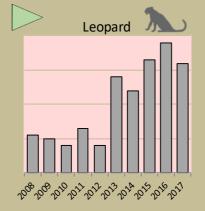

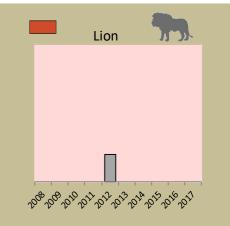

Predator monitoring

charts show the average number of animals seen per Event Book each year status barometers reflect the general sightings trend over the last 5 years

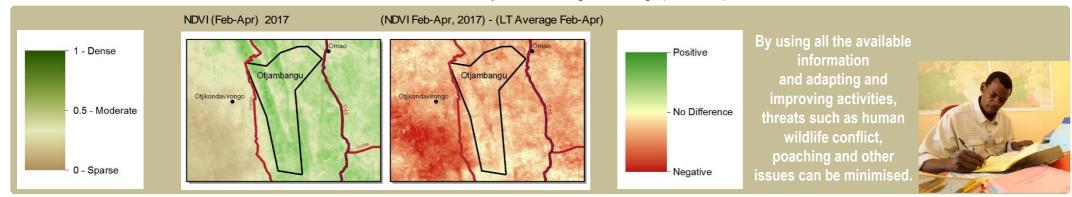

Vegetation monitoring Green vegetation index (NDVI). Maps show vegetation cover during Feb-April of the current year and the difference between the current year and the long term average (2001-2016)
