1. INTRODUCTION AND BACKGROUND

Lebeus Construction and Plumbing CC has been allocated proposed Erven A-D of Erf 3571, Ondangwa Extension 16 by Ondangwa Town Council in order to develop and construct 4 single residential properties. The proposed Erven are located in Extension 16, Ondangwa Town in Oshana Region in north central Namibia. The Ondangwa Town Council resolved to allocate the land in order to help with the provision of housing in the northern town and to reduce the housing backlog of the town.

Proposed Erven A-D/3571 are currently zoned as a "Public Open Space" and in order for the construction of houses to commence, the statutory town planning and environmental management procedure for the permanent closure of proposed Erven A-D of Erf 3571, Ondangwa Extension 16 as a "Public Open Space" has to be carried out.

Nghivelwa Planning Consultants, a Town and Regional Planning and Environmental Management Consultancy firm has been appointed to conduct an Environmental Impact Assessment and Environmental Management Plan (EMP) for the permanent closure of proposed Erven A-D of Erf 3571 as a "Public Open Space" and subsequent rezoning to "Single Residential". The Environmental Impact Assessment has been conducted to meet the requirements of the Namibia's Environmental Management Act (No. 7 of 2007).

Proposed Erven A-D of Erf 3571, Ondangwa Extension 16 are currently owned by the Ondangwa Town Council and currently measure ±1 692m² in extent. They are situated on the property legally known as Erf 3571, Ondangwa Extension 16, Ondangwa Urban Constituency, Oshana Region as shown in Figure 1 below. The site is currently vacant. The proposed site is located in the middle of Ondangwa Extension 16. The GPS coordinates of the location of the proposed project site are: 17° 54.625'S, 15° 59.534'E.

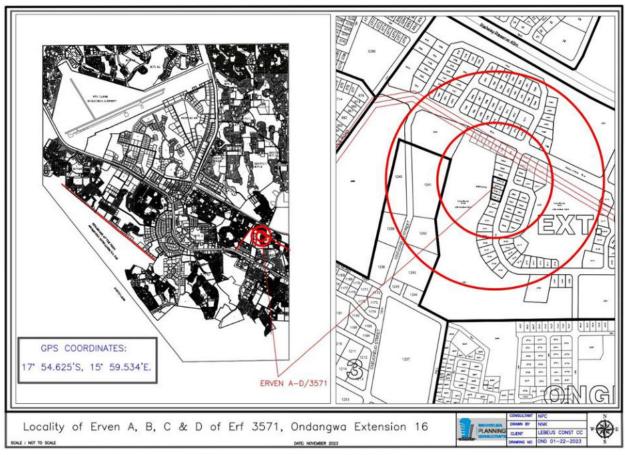

Figure 1: Locality Plan

The purpose of the EMP report is to proactively address potential problems before they occur. This will ensure that unnecessary damage to the environment during the construction phase is avoided. Moreover, mitigation measures will be implemented to minimize environmental degradation.

2. PROJECT DESCRIPTION

The proposed activity is for the subdivision of the Remainder of Erf 3571, Ondangwa Extension 16 into Erven A-D and Remainder, permanently close the proposed Erven A-D of Erf 3571, Ondangwa Extension 16 as a "Public Open Space" and subsequently rezone the proposed Erven A-D/3571 from "Public Open Space" to "Single Residential". The activity involves the constructions of 4 houses on the newly created, closed and rezoned erven.

It also includes the maintenance of the site during the operational phase such as waste disposal, noise pollution as well as maintenance of the afore-mentioned municipal services. The proposed Erven A-D/3571 are already connected to the municipal services of Ondangwa Extension 16 and they will obtain access from the adjacent street that is already constructed. Thus, there will be no construction of bulk municipal services for this development.

All new erven to be created will be connected to the existing bulk services and the water-borne sewage will be connected to the sewerage reticulation system of Ondangwa, the harmful residue that is created will be transported to the waste disposal site as to be provided by the Ondangwa Town Council. The land is currently not developed and there is no fauna or flora that is found on the property. Thus, the proposed residential development is consistent with future plans of the government.

3. SCOPE

The framework within which this Environmental Management Plan Report (EMP) is developed includes identifying various activities, their occurrence in the construction process and the likely impacts that are associated with those activities. It is therefore necessary to subcategorize the EMP report into Pre-Construction, Construction and Post-Construction activities.

The first category of the EMP report that deals with the pre-construction activities identifies the impacts and mitigation measures that will need to be employed before the construction of the proposed project commences.

The second category of the EMP report that deals with the construction activities and the mitigation measures that will need to be implemented to reduce the severity of the impacts the proposed development may have on the surrounding environment.

The third category of the EMP addresses the rehabilitation measures that will need to be implemented once the construction is completed, to ensure that the impact of the proposed rehabilitation on the environment is minimized. Furthermore, it will discuss activities that need to be undertaken to ensure that no environmental degradation does not occur as a result of the project.

The construction and operational of the proposed residential properties will involve;

- Preparation of the site, including excavations, no blasting is required.
- > Transportation of materials to the site.
- > Off-loading of materials on site.
- Construction of foundations and buildings.
- > Supply of bulk services such as water, electricity, waste disposal and waste management
- ➤ Maintenance of bulk services by Ondangwa Town Council.

The Environmental Impact Assessment study report includes an impact assessment and their mitigation measures of the three phases of the proposed project after the following was conducted:

> Field investigations (site assessment),

- ➤ Identifying and involving all stakeholders in the Environmental Impact Assessment process by expressing their views and concerns on the proposed project;
- ➤ Identify all potential significant adverse environmental and social impacts of the project and recommend mitigation measures to be well described in the Environmental Monitoring Plan (EMP);
- ➤ Coordination with the proponent, regarding the requirements of law of Namibia's Environmental Management Act (No. 7 of 2007) and other relevant policies and administrative framework.
- > Consultation of the Terms of Reference for the Environmental Impact Assessment study.
- ➤ A review of the policy, and relevant legislations
- ➤ Provision of overall assessment information of the social and biophysical environments of the affected areas by the proposed development.

The Environmental Management Plan (EMP) aims to take a pro-active route by addressing potential problems before they occur. This should limit the corrective measures needed, although additional mitigating measures might be included if necessary.

4. POLICY AND OTHER RELEVANT LEGISLATIONS

The following legislation is used to guide the permanent closure and rezoning of public open spaces processes in Namibia.

SUBJECT	INSTRUMENTS AND CONTENT	APPLICATION TO THE PROJECT		
The Constitution of the Republic of Namibia	General human rights — eliminates discrimination of any kind The right to a safe and healthy environment Affords protection to biodiversity	Ensure these principles are enshrined in the documentation of the project		
Environmental Management Act EMA (No 7 of 2007)	Requires that projects with significant environmental impact are subject to an closure is carried out within the			
Environmental Impact Assessment (EIA) Regulations GN 28-30 (GG 487	Details requirements for public consultation within a given environmental assessment process (GN 30 S21). Details the requirements for what should be included in a Scoping Report (GN 30 S8) and an Assessment Report (GN 30 S15).	Ensure that the township establishment aligns with the EIA regulations.		
Forestry Act No 27 of 2004	Provision for the protection of various plant species	Some species that occur in the area are		

Hazardous Substances Ordinance 14 of 1974:	Control of substances which may cause injury or ill-health or death of human beings because their toxic, corrosive, irritant, strongly sensitizing or flammable nature	protected under the Forestry Act and a permit is therefore required to remove the species The waste generated on site and at the campsite should be suitably categorised/classified and disposed of properly and in accordance with the
The Nature Conservation Ordinance (No. 4	Prohibits disturbance or destruction of protected birds without a permit. Requires a	Measures outlined in the Ordinance. Protected plants will have to be identified during the planning phase of the project. In case
of 1975)	permit for picking (the definition of "picking" includes damage or destroy) protected plants without a permit	there is an intention to remove protected species, then permits will be required.
Forestry Act 12 of 2001 Nature Conservation Ordinance 4 of 1975	vegetation within 100 m from a watercourse (Forestry Act S22 (1)).	Even though the Directorate of Forestry has no jurisdiction within townlands, these provisions will be used as a guideline for conservation of vegetation.
Convention on Biological Diversity, 1992	Protection of biodiversity of Namibia	Conservation-worthy species not to be removed if not absolutely necessary.
Water Resources Management Act 11 of 2013	The Act provides for the management, protection, development, use and conservation of water Resources; to provide for the regulation and monitoring of water services.	Obligation not to pollute surface water bodies
National Heritage Act 27 of 2004	Section 48(1) states that "A person may apply to the [National Heritage] Council [NHC] for a permit to carry out works or activities in relation to a protected place or protected object	Any heritage resources (e.g. human remains etc.) discovered during construction requires a permit from the National Heritage Council for relocation
Labour Act 11 of 2007	Details requirements regarding minimum wage and working conditions (S39-47).	Employment and work relations

Health and Safety Regulations GN 156/1997 (GG 1617	Details various requirements regarding health and safety of labourers.	Protection of human health, avoid township establishment at areas that can impact on human health.
Public Health Act 36 of 1919	Section 119 states that "no person shall cause a nuisance or shall suffer to exist on any land or premises owned or occupied by him or of which he is in charge any nuisance or other condition liable to be injurious or dangerous to health."	Ensure that all contractors involved during the construction, operation and maintenance of the proposed project comply with the provisions of these legal instrument
Water Resources Management Act 11 of 2013	Prohibits the pollution of underground and surface water bodies (S23 (1)). Liability of clean-up costs after closure/ abandonment of an activity (S23 (2)).	The protection of ground and surface water resources should be a priority. The main threats will most likely be concrete and hydrocarbon spills during construction and hydrocarbon spills during operation and maintenance.
Urban and Regional Planning Act no 5 of 2018	Details the functions of the Urban and Regional Planning Board including their consideration when assessing an application for the permanent closure of public open spaces and subsequent rezoning (S3)	The proposed subdivision plan and land uses should be informed by environmental factors such as water supply, soil etc. as laid out in Section 3 of the act.
Local Authorities Act no 23 of 1992	Details the procedures to be followed for the permanent closure of public open spaces in Local Authority Areas.	The public must be informed on the permanent closure of public open spaces.

Table 1: Relevant legislation

5. MANAGEMENT PRINCIPLES

These guideline principles will form the basis for environmental management on site. Should these principles require modification or additions during the project this should be done at the discretion of the responsible person, who will ensure that any modifications are communicated, explained to and discussed with all affected parties (i.e. the Ondangwa Town Council, Lebeus Construction and Plumbing CC, Nghivelwa Planning Consultant, the contractors, service providers, and any affected party who requests this information).

The environmental operational procedures and environmental issues are identified and managed, under different phases of the project. The different phases are:

Pre-construction (including design);

- > Construction Phase:
- > Operational Phase; and
- Decommissioning Phase

a) Environmental Issues to be managed

ii) Pre-Construction Phase

The Ministry of Environment and Tourism (MET) must be notified:

- Within 30 days, of change of ownership / developer.
- ➤ Of any change of address of the owner / developer.
- ➤ One month prior to commencement of construction activities.
- > One month prior to commencement of operation.

The owner / developer must ensure to comply with the conditions described in the Record of Decision. If required by the Record of Decision, advertise the authorisation for one day for two consecutive weeks in two local newspapers. Records of all environmental incidents must be maintained, and a copy of these records be made available to the Ministry of Environment and Tourism (MET) on request throughout project execution.

ii) Construction and Operational Phases

Unless otherwise indicated, the responsibilities of the construction contractor(s) and service providers will adhere to specified EMP actions for the construction phase. During the operational phase, the Ondangwa Town Council will ensure that the following actions are implemented by establishing accountability and responsibility between the different role players.

b) Consultation with Interested and Affected parties (IAPs)

During these two phases the Construction and Operational Phases, it is of great value to establish an open communication channel between the developers Lebeus Construction and Plumbing Cc, Ondangwa Town Council, the contractors and IAPs such that any queries, complaints or suggestions can be dealt with quickly and by the appropriate person(s).

6. ROLES AND RESPONSIBILITIES

This section describes the roles and responsibilities of the key stakeholders involved in the development, implementation and review of the EMP.

Competent Authority

The Department of Environmental Affairs: Ministry of Environment, Forestry and Tourism is responsible for the review of the EMP documents it is the competent authority.

Lebeus Construction and Plumbing CC (Applicant)

The role of the applicant is as follows:

- ➤ Lebeus Construction and Plumbing CC as the applicant in conjunction with Ondangwa Town Council, should hire suitably qualified person(s) and assign them with the responsibility to ensure implementation of the EMP, and should:
- ➤ Know the contents and implications of the EIA and monitor the implementation of EIA findings using the EMP.
- Revise the EMP as required and inform the relevant parties of the changes.
- The applicant should review reports regarding the implementation of the EMP and make payments to the Contractor if the EMP is being implemented in a satisfactory manner.
- ➤ Give warning and impose fines and penalties on the Contractor if the Contractor neglects to implement the EMP satisfactorily.
- > Protect the environment and rehabilitate the environment as prescribed in the EIA.

Lebeus Construction and Plumbing CC (Ondangwa Town Council) (Project Manager)

The Applicant will appoint the Project Manager. The role of the project manager will be:

- ➤ Liaising directly with the relevant authorities with respect to the preparation and implementation of the EMP and meeting the conditions documented in the environmental clearance certificate.
- ➤ Bear the overall responsibility for managing the project contractors and ensuring that the environmental management requirements are met.
- ➤ Inform the contractors of the EMP and Environmental clearance certificate obligations.
- Approve all decisions regarding environmental procedures and protocols that must be followed.
- > Have the authority to stop any construction in contravention with the EMP and RoD.
- ➤ In consultation with the Environmental Control Officer (ECO) has the authority to issue fines for transgressions of basic conduct rules and/or contravention of the EMP.
- Maintain open and direct lines of communication between the proponent, Contractor and Interested and Affected Parties (I&APs) with regards to environmental matters.
- ➤ Attend regular site meetings and inspections where required.

Lebeus Construction and Plumbing CC (Environmental Control Officer)

An Environmental Control Officer (ECO) should be employed by the Contractor. The (ECO) should be available for the duration of the construction period and should have appropriate training and experience in the implementation of the EMP and overseeing construction process. The ECO will implement EMP at all levels and sections (sub-contractors) during the construction of the residential properties. The responsibilities of the ECO include the following:

- Assist the Project Manager and Contractor in finding environmentally responsible solutions to challenges that may arise.
- ➤ Conduct environmental monitoring as per EMP requirements.
- Monitor performance of the contractors and ensure compliance with the EMP and associated method statements.
- Maintenance, update and review of the EMP.
- ➤ Liaison between the contractors, authorities and other key stakeholders on all environmental concerns.
- ➤ Validating regular site inspection reports which are prepared by the Contractor's Environmental Officer (EO).
- ➤ Checking the EO's record of environmental incidents as well as corrective and preventative actions taken.
- ➤ Checking the EO's public complaints register in which all complaints are registered and actions taken thereof.
- ➤ Issuing site instructions to the contractors ECO for corrective actions required.
- Assisting with the resolution of conflict.
- > Communicate all amendments of the EMP to the relevant stakeholders.
- > Conduct monthly audits to ensure that the system for implementing the EMP is effective.

Contractor's Safety Officer

Implement the recommendations in the EIA and satisfy the conditions in the RoD.

- Ensure that safety is practiced for all activities on site.
- Prepare and implement safety procedures
- ➤ Communicate all safety related issues.

Contractors

The contractor should appoint the Contactor's representative who is suitably qualified to implement the EMP. The responsibilities of the Contractor include:

➤ Compliance with the relevant legislation and the EMP.

- ➤ Preparation and submission to the proponent through Project Manager the following Management Plans prior to commencing work:
- > Environmental Awareness Training and Inductions;
- > Emergency Preparedness and Response;
- ➤ Waste Management; and
- ➤ Health and Safety.
- Environmental awareness presentations (inductions) to be given to all site personnel prior to work commencement; the ECO is to provide the course content and the following topics, at least but not limited to, should be covered:
- ➤ The importance of complying with the relevant Namibian, International and Best Practice Legislation.
- ➤ Roles and Responsibilities, including emergency preparedness.
- Basic Rules of Conduct (Do's and Don'ts).
- > EMP: aspects, impacts and mitigation;
- > Fines for Failure to Adhere to the EMP;
- ➤ Health and Safety Requirements.
- > Record keeping of all environmental awareness training and induction presentations; and
- > Attend regular site meetings and environmental inspections.

Resident Engineer (RE)

The Resident Engineer (RE) will be appointed by the 'Consultant' and will be required to oversee the construction program and construction activities performed by the Contractor. The RE is expected to liaise with the Contractor and ECO on environmental matters, as well as any relevant engineering matters where these may have environmental consequences.

7. PHASES OF THE PROJECT

The Construction Phase

The bulk of the impacts during this phase will have immediate effects (e.g. noise, dust and water pollution). If the site is monitored on a continual basis during the construction phase, it is possible to identify these impacts as they occur. These impacts can then be mitigated through the contingency plans identified in the planning phase, together with a commitment to sound environmental management from the developer.

		expatriates are normally vulnerable			
		and may use the services rendered			
		by the sex workers. A key initiative			
		should be to educate workers.			
		External construction workers			
		should be housed in secure camp			
		and are to abide by rules of the EMP			
		to prevent public disruption (i.e.			
		Spread of HIV/AIDS, crime, public			
		disturbance).			
		Contractors should be encouraged to			
		source labour from surrounding			
		areas to prevent the spread of			
		HIV/AIDs from external workers			
		who will be sourced from other			
		areas out of Ondangwa because			
		sourcing labour from the			
		surrounding area will prevents the			
		spread of the HIV/AID as the			
		residents will not be vulnerable to			
		new workers in the area.			
		new workers in the treat.			

	All government protocols on Covid-19 should be followed at all times.	
	Condoms as a contraceptive should be distributed to construction employees.	
	General healthy living conditions should be enforced on site.	

The Operational Phase

By taking pro-active measures during the planning and construction phases, potential environmental impacts emanating during the operational phase will be minimised. This, in turn, will minimise the risk and reduce the monitoring effort, but it does not make monitoring obsolete.

Ondangwa Town Council to integrate the development into their formal waste collection strategy and that the waste is to be collected regularly and to be disposed of at an authorized disposal site. Illegal dumping of waste in any form is prohibited.			
Land use	The proposed development will result in a slight change in land use as a portion of the public open space is to be used for residential purposes.	The change in land use will contribute to the efficient use of land in Ondangwa by converting unutilized, non-functional public open spaces into residential properties.	Monitored by the Project Manager	Ondangwa T Council	Town

8. ENVIRONMENTAL MONITORING PLAN

Environmental monitoring plan is part of the EMP performance assessment and will need to be compiled and submitted as determined by the Environmental Commissioner. The process of monitoring performances against the objectives and documenting all environmental activities is part of internal and external auditing. This will be coordinated by the Environmental Control Officer (ECO) / External Consultant / Suitable qualified in-house resource person. The table below outline the type of information that shall need to be recorded on a regular basis by the Environmental Control Officer (ECO) as part of the monitoring process of the activities and the effects.
