The lodge Ongava Tented Camp

Ongava Both the company (Ongava Game Reserve (Pty) Ltd, and the reserve (land)

#### 1 INTRODUCTION

#### 1.1 Background

Ongava Tented Camp is located on Ongava Game Reserve, a 30,000 Ha private game reserve wholly owned by Ongava Game Reserve (Pty) Ltd. The company was registered in 1991 and owns the land, infrastructure and business, including four upmarket lodges on the reserve.

Ongava Tented Camp (the lodge) opened in 1996, before the Environmental Management Act 7 of 2007 came into effect. It received Environmental Clearance (EC) in December 2017. COVID, the closure of lodges and the resulting lack of income is the reason that this application for renewal was not submitted before December 2020.

#### 1.2 Scope of this document

This document contains the Environmental Management Plan (EMP) that is used by the management and staff of the lodge. It has been reviewed to reflect the most current protocols and practices in use, but no significant changes were made to the infrastructure or operational protocols in the past three years.

The EMP consists of a description of the current infrastructure and activities of the lodge, followed by a table identifying potentially negative environmental impacts and suggesting management actions that aim to prevent or mitigate each potential impact.

It is submitted to MEFT in support of an application for renewal of EC.

#### 2 PROJECT DESCRIPTION

#### 2.1 Location

Ongava Game Reserve is located 90 km north of Outjo on the C38, with its main entrance 50 m from the Andersson Gate of Etosha National Park. The northern boundary of the reserve is formed by the Etosha border fence (Figure 1).

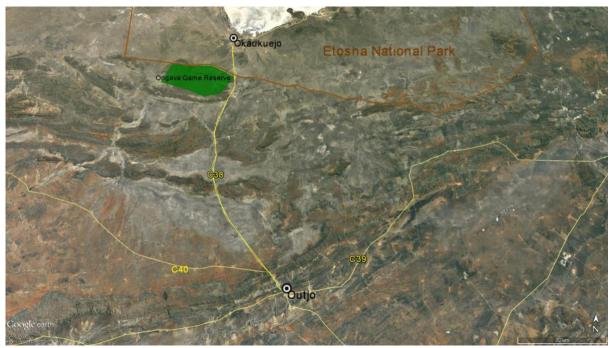

Figure 1. Location of Ongava Private Game Reserve (green area) near Andersson gate.

#### 2.2 Wildlife

With Etosha forming the northern border and healthy populations of prey species present on the reserve, lions abound on Ongava and elephants occasionally break through the fence. All game species that occur naturally in the geographical area are present, including the endemic black-faced impala and predators such as leopard and jackal.

The conservation of rhinos is a core value of the business. Ongava provides an environment in which both white and black rhino populations breed successfully. Security is ensured by a professional anti-poaching unit with the sole duty of protecting fauna and flora on the reserve.

A game fence of 2.3 m high encloses Ongava Game Reserve along its entire border. The game fence is electrified with five strands on the southern, eastern and western sides. On the northern boundary (bordering Etosha), there are four strands of electrification on a cattle fence.

#### 2.3 Activities

Game drives on the reserve and into Etosha are conducted in open game viewing vehicles, driven by qualified guides. Some guests are self-driven and choose to do their own excursions into Etosha, using the lodge as their base.

#### 2.4 Infrastructure

Ongava Tented Camp nestles in Mopani woodland at the foot of a dolomite hill (Figure 3). The buildings are positioned on ground level for a close-up, intimate bush experience. A waterhole directly in front of the lounge ensures frequent wildlife encounters in the camp.

#### 2.4.1 Main area

The main area is built of stone and thatch with stone paving and a wooden deck. It contains a bar, curio shop, dining room, lounge and outdoor lounge/eating area (C in Figure 3). The swimming pool is surrounded by stone paving (Figure 2). Vehicles park in a compacted dirt area (A in Figure 3).

Figure 2. Swimming pool and main area.

Figure 3. Aerial photo showing layout of Ongava Tented Camp.

A: Parking, B: 2x management houses, C: main area, D: kitchen, E: laundry and senior staff accommodation, F: fenced path to staff village, G: staff village

#### 2.4.2 Back of house

The kitchen, a stone building with corrugated iron roof and concrete floors, is detached from the main area (D in Figure 3). It includes food and drinks storage, an office and staff toilet.

The laundry and housekeeping store rooms are housed in a brick building with corrugated iron roof (E in Figure 3).

#### 2.4.3 Guest rooms

There are eight guest units sleeping a total of 18 guests, plus two twin tents for paying pilot/guides. The tents are mounted on wooden platforms, connected to the main area by sand pathways (Figure 4). All the tents are en-suite.

The regular presence of lions in this camp obliges extra safety measures. Guests are accompanied to and from their tents by a weapons qualified guide.

Figure 4. Guest tent.

#### 2.4.4 Staff accommodation

The lodge has 26 staff members. The staff village (G in Figure 3) is surrounded by a 2.3 m high fence with two electrified strands, necessitated by the regular presence of lions in the camp. The pathway to the staff village is also fenced (F in Figure 3). Each staff member has a single room and ablutions are shared. Other staff facilities include a kitchen and lounge with DSTv provided by Ongava.

The laundry and senior staff accommodation compound (E in Figure 3) contains five en-suite guide rooms, and three en suite management rooms.

Management accommodation (B in Figure 3) consists of two canvas, deck and thatch houses; one with two bedrooms and the other with one bedroom.

#### 2.4.5 Support infrastructure

There is no workshop at Ongava Tented Camp, since all vehicle maintenance is done at the Reserve headquarters. Maintenance and housekeeping store rooms are indicated by E in Figure 3. Diesel tanks (two 2,200 litre) are mounted on a bunded cement floor to contain spillage. The entire back of house complex (E in Figure 3) is surrounded by a 2.3 m high electrified fence.

#### 2.5 Services

#### 2.5.1 Water supply and reticulation

Water supply is from three boreholes. The main borehole, 45 m deep and 150 m from camp, supplies water to the main area, kitchen and guest tents. The staff village and water hole are supplied from a 30 m deep borehole at the staff village. The third borehole, 35 m deep, is for back-up and is located 400 m south of the camp. The boreholes are fitted with submersible low-volume pumps to ensure a stable water level.

#### 2.5.2 Wastewater and sewage

Sewage is disposed of in a three-chambered French drain system at each guest tent. Staff ablutions, management houses, main area and laundry each has a separate 3-chambered septic tank system.

#### 2.5.3 Solid waste

Solid waste is taken to a waste storage enclosure at the Reserve headquarters. Recyclable waste is separated on site and the remaining solid waste is collected weekly and taken to an official landfill in Outjo.

#### **2.5.4** Energy

Electricity for the entire camp and staff village is supplied by a PV system with inverter and batteries. It is backed up by a 4-cylinder generator in a self-contained metal unit, mounted on a cement floor.

#### 2.5.5 Roads and tracks

Ongava Reserve has a well-established road network, consisting of constructed gravel roads with camber and drainage ditches. The roads are graded by the Reserve maintenance team and they also repair and maintain speed bumps and culverts.

#### 2.6 Design and landscaping

A sense of place is maintained by the use of materials such as thatch, canvas, wood and rocks sourced from disturbed road verges on the Reserve.

There is no garden, only naturally occurring vegetation. Staff are trained to actively preserve naturally occurring vegetation. The main area, guest tents and staff accommodation are linked by clearly demarcated sand walkways, ensuring that neither staff nor guests walk through the bush.

#### 3 IMPACTS AND MITIGATION

#### 3.1 Objectives

The Environmental Management Plan (EMP) has two main objectives:

- identify potential negative impacts associated with the project.
- propose measures to prevent or mitigate negative impacts.

Implementation actions aim to minimise negative impacts and enhance positive impacts that originate from the Project. The EMP is a living document that is updated as new information, policies, authority guidelines and technologies are developed and become available.

#### 3.2 Tools

Ongava Tented Camp adheres to the following guidelines and procedures that govern their management actions:

- Guiding Protocol
- Ongava Management Plan
- HR guidelines
- Standard Operating Procedures
- Health & Safety annual audit

#### 3.3 EMP Implementation

Management measures to mitigate each potential negative impact are proposed in an implementation plan in Table 2. The three headings of the implementation plan are discussed here.

#### Nature of impact

Possible impacts on a feature or function of the environment are identified. Description of potential risk sources (impacting activities) and the mechanisms through which an impact may occur are described.

#### **Mitigation**

Mitigation measures are proposed for each identified impact. These measures consist of specific management actions that need to be carried out in order to avoid, minimise or remedy negative impacts, together with adjustments to respond to unforeseen impacts.

#### Responsible person

Successful implementation of an EMP relies on defined roles and responsibilities. Ongava has allocated duties to individuals and teams, and they are responsible for carrying out the required management actions (

Table 1).

Table 1. Responsible persons and teams

Individuals and teams in charge of carrying out the management actions are given, with a description of their responsibilities.

| Person/Team         | Responsibilities  |
|---------------------|---|
| General Manager     | Overall responsibility for implementation of EMP.               |
| Operations (GO)     | Support to the construction team and Ongava staff for           |
|                     | implementation of environmental management measures.            |
| Maintenance & Asset | Day to day supervision of other role players.                   |
| Manager (MM)        | Maintenance of buildings, vehicles, machinery, sewage and waste |
|                     | systems at The lodge.   |
| Lodge Management    | Overall management of Ongava Tented Camp.                       |
| (LM)                |   |
| Human Resource      | Employment of staff   |
| Manager (HR)        |   |
| Farm Manager (FM)   | Maintenance of reserve infrastructure and living assets         |
| Guides              | Transport of guests.  |
|                     | Ensuring appropriate human-wildlife interactions.               |
| Contractor          | Construction  |

## 3.4 Construction phase

No construction is planned at The lodge in the foreseeable future.

## 3.5 Operations phase

Table 2. Implementation plan

| NATURE OF IMPACT  | MITICATION   | RESPONSIBLE     |  |  |
|---|--|-----------------|--|--|
| NATURE OF IMPACT  |  | PERSON          |  |  |
| Soil damage   |  |                 |  |  |
| Compaction of and damage to soil  | Only existing roads are used for driving. Making tracks next to a road is not allowed. Taking shortcuts is not allowed.  | All             |  |  |
|   | New roads and tracks have to be authorised and are developed according to the road plan.   | GO & MM         |  |  |
|   | No off-road driving.   | All             |  |  |
|   | Vehicles may be parked only in designated parking areas.   | LM              |  |  |
|   | Plains with sensitive, compactable soils should be avoided (vehicle damage to soil is irreversible).   | Guides          |  |  |
| Damage to roads and   | Low tyre pressure on all operational vehicles.   | Guides, MM, FM  |  |  |
| tracks  | Operational vehicles are 4-wheel drive and of standard width.  | GO & MM         |  |  |
| Soil erosion  | Implement measures to disperse concentrated water flow and repair erosion at such locations.   | FM              |  |  |
| Contamination of soil by hydrocarbons                                   | Oil pans are used in vehicle parking areas. Fuel dispensing takes place over impervious, bunded surfaces or drip trays.  | GO & MM         |  |  |
|   | Vehicle servicing is done on impervious, bunded surfaces or over oil pans  | GO & MM         |  |  |
|   | Used oil is stored in appropriate receptacles and despatched to appropriate waste facility.  | GO & MM         |  |  |
|   | Fuel is stored in appropriate receptacles and on bunded surface.   | GO & MM         |  |  |
|   | Fuel is dispensed on bunded surface  | MM              |  |  |
| Contamination of soil by sewage & waste water                           | Discussed under "Sewage and waste water"   |                 |  |  |
| Distu   | rbance of animals, their behaviour and habitats  |                 |  |  |
| Impacts associated with human-wildlife interaction                      | Guests and employees are made aware that they are in a sensitive environment.  | LM & Guides     |  |  |
|   | Guests and employees are made aware of the appropriate way to interact with wildlife.  | LM & Guides     |  |  |
|   | Driving on Ongava Game Reserve is strictly regulated by permit system. Self-drive is allowed only between main gate and lodge.   | LM & Guides     |  |  |
|   | Game drives and walking activities are always led by qualified guides.   | LM & Guides     |  |  |
|   | Guides are trained in conservation and cultural/historical aspects relevant to the local area. Guide training includes appropriate protocols and behaviour guidelines for the activities offered by the lodge. | HR, LM & Guides |  |  |
| Protected species are disturbed or destroyed by operational activities. | Avoid sites with nests, burrows, dens, etc. of protected species.  | GO & Guides     |  |  |

| NATURE OF IMPACT   | MITIGATION   | RESPONSIBLE<br>PERSON |
|--|--|-----------------------|
| Poaching by staff or contractors                         | The greater area around the site is searched regularly for snares.   | FM                    |
|  | Foot traffic is virtually non-existent on Ongava Game Reserve due to a high concentration of free-roaming lions.   | All                   |
|  | Unauthorised driving on tracks is virtually non-existent: patrols by the anti-poaching unit, and the constant presence of farm management staff and guides on roads and tracks are effective control measures. | FM & Guides           |
| Damage to animal habitats                                | No picking of plants, collection of firewood or any other damage-inducing activity is permitted.   | All                   |
|  | Employees are educated on the need to refrain from the destruction of plants and animals, as well as from indiscriminate defecation, waste disposal and pollution of soil and water resources.                 | LM                    |
|  | Disturbance of and damage to vegetation  |                       |
| Protected species are affected by operational activities | No protected, rare or endangered plants may be disturbed, damaged or removed.  | GO & Guides           |
| Damage to plants and habitats                            | Driving on Ongava is strictly regulated by permit system. Self-drive allowed only between main gate and lodge. Unaccompanied walking is allowed only in lodge area, within electrified fence.                  | LM & Guides           |
|  | Game drives and walking activities are always led by qualified guides employed by the lodge.   | LM & Guides           |
|  | No plants or other natural resources may be disturbed, violated, mutilated, destroyed or removed.  | All                   |
| Firewood collection disturbs microhabitats               | Fires are used only for ambience for guests, not for cooking or heating. Firewood is brought in from reputable, renewable resources, such as bush-clearing projects.   | All                   |
| Spread of invasive vegetation                            | The lodge and surrounding area are kept free of alien and invasive vegetation.   | FM                    |
|  | Hydrological impacts   |                       |
| Disruption of surface water hydrology                    | No driving in seasonally inundated areas when they are flooded or moist. Drainage lines are entered and exited only at designated points.  | FM & Guides           |
|  | Eroded roads and roads traversing wet areas are closed for vehicle traffic and alternative routes are used until such time as the areas are deemed suitable for traffic.                                       | GO & FM               |
| Contamination of surface and ground water                | The use of biodegradable and eco-friendly guest amenities, soaps and detergents in kitchen and laundry should be enforced.   | LM                    |
|  | Oil pans are used in vehicle parking areas. Fuel dispensing takes place over impervious, bunded surfaces or drip trays.  | LM & MM               |
|  | Vehicle servicing is done on impervious, bunded surfaces or over oil pans.   | ММ                    |

| NATURE OF IMPACT                                     | MITIGATION   | RESPONSIBLE PERSON |
|--|--|--------------------|
|  | Used oil is stored in appropriate receptacles and despatched to an appropriate waste facility.   | MM & FM            |
|  | Fuel is stored in appropriate receptacles and on an impermeable bunded surface.  | MM                 |
|  | Fuel is dispensed on an impermeable bunded surface.  | LM                 |
| Water conservation measures                          | Water conservation is actively promoted among guests and staff. Guests are informed of water scarcity and encouraged to participate in water conservation. | LM                 |
|  | Measure and record water use. Compare usage with targets.  | LM                 |
|  | Repair leaks in the water reticulation system within 24 hrs of detection.  | LM & MM            |
| Water saving devices                                 | Dual-flush toilets with small capacity cisterns.   | LM & MM            |
|  | Low-flow showers; bucket in shower to collect pre-warm water; garden irrigation only at night; reverse osmosis system for drinking water                   | LM & MM            |
| Contamination of groundwater by sewage & waste water | Discussed under "Sewage and waste water"   |                    |
|  | Air quality  |                    |
| Air pollution caused by                              | Burning of rubbish is limited to small amounts of packaging  | MM                 |
| emissions  | emissions material.  Vehicles are serviced regularly and monitored for excessive exhaust emissions.  |                    |
|  |  |                    |
| Generator is used only in case of grid outage.       |  | LM & MM            |
|  | Noise pollution  |                    |
| Generator noise                                      | Generator is housed in noise-limiting container and used only in case of grid outage.  | LM & MM            |
| Other equipment                                      | Graders, diggers, tractors, road-building equipment, power tools are used during daylight hours only.  | FM                 |
|  | Visual impact  |                    |
| Negative visual impacts                              | Buildings and other structures are designed and located so as to maintain a sense of place.  | All                |
|  | Motorised accessibility is limited to existing roads and tracks.   | All                |
|  | Only subdued or directional lighting is used.  | LM & MM            |
|  | Solid Waste  |                    |
| Prevention of pollution through proper waste         | Solid waste is collected weekly from the Reserve holding facility and transported to official landfill in Outjo.   | MM                 |
| management   | Waste bins are provided at the point of source. All waste bins are covered and secured to be animal proof.   | LM & MM            |
|  | Solid waste is stored in a bird- and animal proof holding cage at the lodge, then taken to the Reserve holding facility at Tiervlei.                       | LM & MM            |
|  | No burying or burning is done on the Reserve, all waste is removed to appropriate facilities.  | FM                 |
|  | Used hydrocarbons are stored in sealed drums and despatched to an appropriate waste facility.  | LM & MM            |

| NATURE OF IMPACT   | MITIGATION  | RESPONSIBLE<br>PERSON |  |  |
|--|---|-----------------------|--|--|
| Sewage and waste water   |   |                       |  |  |
| Contamination of soil, as well as surface and groundwater, due to sewage and waste water discharge  All sewage is restricted to a closed system that terminates at a water purification plant. Purified water is used for dust suppression on the main roads of the reserve. |   | LM & MM               |  |  |
| Ecological impacts   | Fat traps at kitchen outlets are cleaned and maintained regularly.  | LM                    |  |  |
|  | Purification system, septic tanks and evaporation pond are maintained.  | MM                    |  |  |
| Unpleasant odours  | Qualitative monitoring of odours.   | All                   |  |  |
|  | Should unpleasant odours be identified, the source of the odours is identified and repaired within 1 week of identification.  | ММ                    |  |  |
|  | Energy  |                       |  |  |
| Excessive use of non-<br>renewable sources of<br>energy  | Energy use (electricity, diesel, petrol, paraffin, gas) is metered and monitored. Readings are compared with target usage to ensure optimum efficiency.                             | LM                    |  |  |
| Energy saving measures   | Generator is used only as back-up when the PV system is off.  | LM                    |  |  |
|  | Solar geysers provide hot water.  | MM                    |  |  |
|  | Cooking on gas; laundry washed in cold water; fridges and freezers are energy-efficient, insulated and sealed.  | LM                    |  |  |
|  |   | LM                    |  |  |
|  | Health and safety   |                       |  |  |
| Labour policies  | The company is in compliance with all national legislation and regulations governing workplace equity and diversity.  | GO & HR               |  |  |
| Staff and guest health and safety  | The company is in compliance with all national legislation and regulations governing health and safety measures.  | GO & LM               |  |  |
|  | Protective clothing, as appropriate to operations, is provided to employees.  | LM                    |  |  |
|  | Adequate first aid kits are available and regularly maintained. A suitable number of employees is trained in first aid.   | LM                    |  |  |
|  | On-site staff housing is large enough, secure, clean, and provided with water, sanitation and energy.   | LM & MM               |  |  |
|  | Employees and guests are made aware of procedures to follow in the event of an emergency, e.g. which person to contact, how to contact him/her during the night; evacuation routes. | LM                    |  |  |
|  | Employees responsible for guest transport have valid licences and public driving permits.   | LM                    |  |  |
| Fire   | All precautions are taken to prevent the outbreak and spread of fires. Employees are aware of the necessary precautions.  | LM                    |  |  |
|  | Fire fighting equipment is available, regularly maintained, and employees are trained in fire safety.   | LM                    |  |  |
|  | Gas canisters are stored in Bureau of Standards approved structures.  | LM                    |  |  |

| NATURE OF IMPACT |   | RESPONSIBLE PERSON |
|------------------|---|--------------------|
|                  | Fire extinguishers are strategically located throughout the developed area. | LM                 |

#### 3.6 Closure & decommissioning phase

There is no intention to cease operations or decommission Ongava Tented Camp in the foreseeable future. Since tourism has an indefinite projected lifespan, and since the land, immovable assets and business are privately owned and the owners have a vested interest in the success of the operation, there is currently no decommissioning plan.

Should closure and decommissioning of any of the Ongava Reserve assets be required, an extensive decommissioning plan will be drawn up and meticulously followed according to the highest standards of environmental management best practices. The priority for closure will be to return the land as closely as possible to the pre-construction condition. Measures will be taken to prevent soil erosion and provide protection so that plants can re-colonise. A site assessment will be carried out after closure to ensure that no structures remain and that site rehabilitation has been fully achieved.

#### Rehabilitation and Closure objectives

There are three primary closure objectives.

- 1. Protect public health and safety, as well as health and safety of fauna and flora.
- 2. Alleviate or eliminate environmental damage.
- 3. Return the site to its original, pre-development condition.

#### 4 ENVIRONMENTAL MONITORING

Compliance with the EMP is monitored regularly. Key aspects to monitor are given in Table 3 but the lodge manager and owner may add to these and may delegate specific tasks as required by the lodge operations.

Table 3. Mitigation components to be monitored.

The headings include the measurable unit that is monitored, the frequency of monitoring, and the person responsible.

| To be monitored      | Measurable   | Frequency              | Person        |
|----------------------|--|------------------------|---------------|
| Water consumption    | Usage in litres per total bednight *                   | Monthly                | LM            |
| Groundwater quality  | Fitness for human consumption                          | Annually               | MM            |
| Sewerage system      | Septic tanks   | Monthly                | MM            |
| Sewerage pipes       | Leaks  | Monthly                | MM            |
| Grey water pipes     | Leaks  | Monthly                | MM            |
| Fat traps            | Functioning equipment, clean filter                    | Weekly                 | LM, MM        |
| Water installations  | Functioning of purification equipment                  | Weekly                 | LM, MM        |
| Trickle filter plant | Functioning equipment                                  | Weekly                 | LM, MM        |
| Solid waste          | Secure storage of solid waste                          | Daily                  | LM            |
| Solid waste          | Removal of waste from site and secure storage of waste | Daily, weekly          | LM, MM        |
| Soak-aways           | Drainage   | Weekly                 | MM            |
| Tracks & roads       | Erosion  | Weekly                 | FM            |
| Wildlife             | Wildlife sightings                                     | Every game drive       | Guides        |
| Wildlife             | Species of special interest                            | On-going               | LM, guides    |
| Grid electricity     | Nampower records: usage per total bednight *           | Monthly                | LM            |
| Diesel               | Records at source tanks and generator                  | Daily. Monthly summary | LM            |
| Gas                  | Usage  | Monthly                | LM            |
| Vehicles             | Oil leaks, emissions, tyres                            | Daily                  | Guides,<br>MM |

<sup>\*</sup> Total bednights include every person using lodge resources: guests, staff, managers, scientists, contractors

#### 4.1 Water monitoring

The aim of the water monitoring programme is to assess the consumption and impact of water use on groundwater quality and availability. The Maintenance and Asset Manager carries out the monitoring programme.

#### Groundwater

- Groundwater usage is metered and recorded monthly in order to monitor and manage water consumption.
- Groundwater quality is monitored at point of use (lodge kitchen) and tested annually for mineral and bacterial content to ensure that it is fit for human consumption (Test: Evaluation of drinking water for human consumption, DWA, Namibia, July 1991).

#### 4.2 Energy monitoring

Electricity: grid source is monitored monthly

PV energy is used for hot water in a geyser hybrid system

Gas: monitored monthly

Diesel: recorded daily and monthly summaries are made

Firewood: only dead wood is collected and sourced from de-bushing operations. Fires are used only for ambience in the evenings and no cooking or heating is done with fire, either in the lodge or in the staff village.

#### 4.3 Environmental Performance Assessment

Environmental auditing is aimed at ensuring continual improvement in environmental performance. The lodge keeps records of environmental monitoring data, which is included in an annual report to the Board of Ongava. The annual report contains details of all changes and new projects. Monthly summaries of data are used to assess the level of compliance with environmental legislative requirements and the commitments made in the EMP.

#### 5 ENVIRONMENTAL EMERGENCY PROCEDURES

#### 5.1 Sewage or waste water spills

Should leaks in the sewerage or waste water system be detected, the following actions will be taken:

- The spillage will be contained and the source turned off if possible. Depending on the amount of spillage, it will be remediated in situ or in the case of a large spillage that is contained, it will be removed.
- The reason for the spillage will be rectified.

#### 5.2 Hydrocarbon or chemical Spills

The objective is to contain and remediate spillages of chemicals such as pool cleaners and housekeeping products.

- Contact management in the event of a spill.
- The spillage is contained and the source turned off if possible.
- Management organises a team to assist with cleaning.
- Demarcate the spilled area where practicable.
- Move the spill kits to the area.
- Scoop up the spilled substance along with contaminated soil or any absorbent material using the spill kit shovel. Place the scooped up substance into plastic bags.
- The waste bags should be marked as hazardous waste and disposed of as hazardous waste.
- The leakage should be stopped and reason for spill rectified.

#### 6 CONCLUSION

This Environmental Management Plan describes the management measures that are implemented with the aim of preventing or mitigating negative environmental impacts and enhancing positive impacts that the lodge activities may have. It is a legal document that commits Ongava Game Reserve (Pty) Ltd to comply with all the management measures, monitoring programmes and other plans as presented in this document.

The EMP is intended as a practical, working protocol to be used in accordance with the principles of adaptive management. As new information, technologies and methods become available, the management measures set out in this document may be adjusted to conform with current best practice guidelines, while staying within the economic means of the business.

There has been no significant change to the infrastructure or procedures and no new or altered negative impacts on the environment have been identified since EC was granted to Ongava Tented Camp in December 2017.
