A worker sanitises a sign at the International arrivals area of Terminal 5 in London's Heathrow Airport, Britain, August 2, 2021

## Africa CDC concerned about UK travel restrictions

The Africa Centres for Disease Control and Prevention (Africa CDC) has noted with deep concern the planned changes to international travel rules in the context of the COVID-19 pandemic, communicated by the Government of the United Kingdom, which will be enforced starting on Monday.

According to the UK government, the new rules will discriminate between the recipients of COVID-19 vaccines not based on the vaccine received but on the region in which these vaccines were received.

Travellers whose vaccination is not recognised based on where they received the vaccines, including but not limited to the African Union Member States, will have to take additional measures resulting in a significant financial and social burden.

These extra measures include two additional tests, pre-departure and "day 8 test" and quarantine for 10 days.

In a statement, Africa CDC says the restrictions will therefore apply to persons having received vaccines through the COVAX programme,

of which the UK is one of the largest supporters, with over USD 700 million as well as 80 million vaccine doses pledged to the programme.

The COVAX supplies constitute almost half of the COVID-19 vaccines supplied to the African continent to date.

"We are deeply concerned that policies and rules such as this carry a risk of deepening vaccine hesitancy across Africa and creates distrust in the community."

The African body adds: "Given the severe consequences of the rules, the Africa CDC, therefore, urge the UK government to a) reconsider their decision and b) with the African Union to discuss how to ensure mutual recognition of vaccines provided through its donations. This will help avoid further restrictions on the movement of the African population, which is already impacted by the limited access to vaccines."

More than 40% of the world population have received at least one dose of the COVID-19 vaccine, only about 4.0% of the African population are fully vaccinated.

# SA presidency publishes Covid scandal report

South African President Cyril Ramaphosa has authorised the release of a special investigation report into the irregular awarding by the health ministry of a contract for a Covid-19 media campaign.

The investigations found that the contract awarded to a firm, Digital Vibes, was irregular and that senior officials had benefited from some of the money paid to the company.

A report on an investigation into the scandal was handed over to the president in early July.

There have been repeated calls for it to be made public.

In a statement on Wednesday, the presidency said that in the interest of fairness, all parties mentioned in the final report had been notified before the release "so they could have an opportunity to object to its publication or part thereof".

The report has now been published on the presidency's website.

The matter forced the resignation of Health Minister Zweli Mkhize in June, after he had been placed on special leave to answer allegations that he influenced the hiring of his close associates in the tender.

Last weekend, the health ministry announced the suspension of the director-general of health, Sandile Buthelezi, over the issue.

# Study reveals why some people get Covid toe condition

**MICHELLE ROBERTS  
HEALTH EDITOR, BBC NEWS ONLINE**

**S**cientists believe they can explain why some people who catch Covid develop chilblain-like lesions on their toes and even fingers.

Covid toe appears to be a side effect of the body switching into attack mode to fight off the virus.

The researchers say they have pinpointed the parts of the immune system that appear to be involved.

The findings, in the British Journal of Dermatology, may help with treatments to ease the symptoms.

## What is Covid toe?

It can happen at any age, but affects children and teenagers more commonly.

For some it is painless, but the rash can be extremely sore and itchy, with tender blisters and swelling.

Sofia, who is 13 and from Scotland, was barely able to walk or wear shoes when she developed Covid toe earlier this year.

Over the summer, she told BBC Scotland's The Nine how she relied on a wheelchair for longer walks.

The affected skin - usually the toes, but sometimes the fingers - can look red or purple. Some people develop painful raised bumps or areas of rough skin. There can also be pus.

Some have it for months, others for weeks.

Often, they will have none of the classic Covid symptoms, such as the persistent cough, fever and loss or change in smell or taste.

## Why does it happen?

These latest study findings, based on blood and skin tests, suggest two

parts of the immune system may be at play.

Both involve mechanisms the body uses to fight coronavirus.

One is an antiviral protein called type 1 interferon, and the other is a type of antibody that mistakenly attacks the person's own cells and tissues, not just the invading virus.

Cells lining small blood vessels supplying the affected areas are also involved, say the investigators from the University of Paris, France.

The researchers studied 50 people with suspected Covid toe in the spring of 2020, and 13 others with similar chilblains lesions that were not linked to Covid infections, because they occurred long before the pandemic began.

They hope the finds will help patients and doctors better understand the condition.

UK paediatrician Dr Ivan Bristow said, for most - like the regular chilblains typically seen during cold spells and in people who have problems with circulation - the lesions usually go away

on their own.

But some may need treatment with creams and other drugs.

"The confirmation of the cause will help to develop new treatments to manage it more effectively," he said.

Dr Veronique Bataille, a consultant dermatologist and spokeswoman for the British Skin Foundation, said Covid toe was seen very frequently during the early phase of the pandemic, but has been less common in the current Delta variant wave.

That might be down to more people being vaccinated or having some protection against Covid from past infections.

"Presentations after vaccination are much rarer," she said.

Covid-related skin problems can appear quite a while after the acute infection and in people who have no other symptoms, so the link with the virus is sometimes not made, she said.

The British Association of Dermatologists has a list of skin conditions that might be linked to Covid.

# Abiy names opposition politicians in new cabinet

**KALKIDAN YIBELTAL  
BBC NEWS, ADDIS ABABA**

**E**thiopia's Prime Minister Abiy Ahmed has announced his new cabinet after being sworn in two days ago following

his party's victory in June's controversial elections.

Three ministerial positions have gone to figures from opposition parties.

Berhanu Nega - the leader of the Ethiopian Citizens for Social Justice

party, which won a few seats in the election - has been appointed minister of education.

He once founded an outlawed rebel group, and first rose to prominence in controversial and bloody elections in 2005 when his then party won an unprecedented high number of seats.

Belete Molla - the head of the National Movement of the Amhara (NaMA) - has been appointed minister of innovation and technology.

Kejela Merdasa - from the once-banned Oromo Liberation Front (OLF) - has been given the post of minister of culture and sport.

One notable appointment from Mr Abiy's Prosperity Party (PP) is that of Abraham Belay as minister of defence.

He headed Tigray's interim administration formed by the government before rebel forces recaptured most of the region in June.

Nearly all the seats in the election were won by the PP. The OLF was among parties that boycotted the poll.
