1 INTRODUCTION

The Outapi Town Council hereinafter referred to as the proponent intends to undertake the following activities:

- Consolidation of Erven 40 61, Erven 63 71 and Erven 73 76, Nakayale Proper into "Consolidated Erf S";
- Rezoning of "Consolidated Erf S", Nakayale Proper from "Residential" with a density of 1:500 to "Residential" with a density of 1:300;
- Subdivision of "Consolidated Erf S", Nakayale Proper into 69 Erven and Remainder and creation of streets;
- Inclusion of the rezoning into the next Outapi Zoning Scheme.

The above development triggers listed activities in terms of the Environmental Management Act (No. 7 of 2007) and Environmental Impact Assessment Regulations (Government Notice No. 30 of 2012).

An Environmental Management Plan (EMP) is one of the most important outputs of the EIA process as it synthesises all of the proposed mitigation and monitoring actions, set to a timeline and with specific assigned responsibilities. This EMP details the mitigation and monitoring actions to be implemented during the following phases of these developments:

- <u>Planning and Design</u> the period, prior to construction, during which preliminary legislative and administrative arrangements, necessary for the preparation of erven, are made and engineering designs are carried out. The preparation of construction tender documents forms part of this phase;
- <u>Construction</u> the period during which the proponent, having dealt with the necessary legislative and administrative arrangements, appoints a contractor for the construction of the proposed development as well as any other construction process(s) within the development areas;
- <u>Operation and Maintenance</u> the period during which the proposed development will be fully functional and maintained.

The decommissioning of these developments is not envisaged; however in the event that this should be considered some recommendations have been outlined in **Table 4-5**.

2 PROPOSED DEVELOPMENT

2.1 Locality

Erven 40 - 61, Erven 63 - 71 and Erven 73 - 76 are situated adjacent to one another in the neighbourhood of Nakayale Proper, Outapi, as depicted **Figure 2-1** below.

Figure 2-1: Locality Map of Erven 40 – 61, Erven 63 – 71 and Erven 73 – 76, Nakayale Proper

2.2 Development Description

Namibia is facing the challenge to provide affordable housing and serviced land to meet the demand for basic shelter and dignity. The town of Outapi is not exempted from this phenomenon. According to the Economic Profile of Outapi as compiled by First Capital Namibia in July 2018, the housing backlog in Outapi was estimated at 4305 houses and rising. With Outapi being the capital of the Omusati Region, the town is facing rapid inmigration of households from the rural areas and smaller villages as these households are seeking to benefit from the institutional and socio-economic opportunities and infrastructure offered by the town.

The Outapi Town Council has resolved to pro-actively address the backlog of affordable housing by pursuing an initiative which will result in residential densification of Nakayale Proper by subdividing some of the larger residential properties into smaller residential properties which are to average between 300m² and 450m² in size. The proximity of Nakayale Proper to the central area of the town which provides the opportunity to cost effectively link the additional erven to the existing municipal infrastructure network, the social mix created by subdividing some of the larger residential properties into smaller and thus more affordable erven as well as the positive impacts obtained in creating opportunities for land ownership are the main drivers of this densification initiative.

The creation of additional residential erven through the Nakayale Proper densification initiative can be supported from an urban development perspective as the area is supported by business, institutional, recreational and infrastructure offerings. The creation of additional residential erven will not lead to an increase of the planned residential density of Nakayale Proper as the densities allocated to the high-density developments within Nakayale Proper, which were to take place on the "General Residential" erven falling within this extension are to be replaced by smaller residential erven. The general character of Nakayale Proper to develop into a walkable and higher density neighbourhood thus is maintained.

2.2.1 The Proposed Consolidation

The proponent intends to consolidate Erven 40 - 61, Erven 63 - 71 and Erven 73 - 76, Nakayale Proper into "Consolidated Erf S". **Figure 2-2 and Table 2-1** below provides an overview of the proposed consolidation.

Erf Number	Erf Size (m ²)	Erf Number	Erf Size (m ²)
40	1395	59	779
41	894	60	868
42	888	61	1194

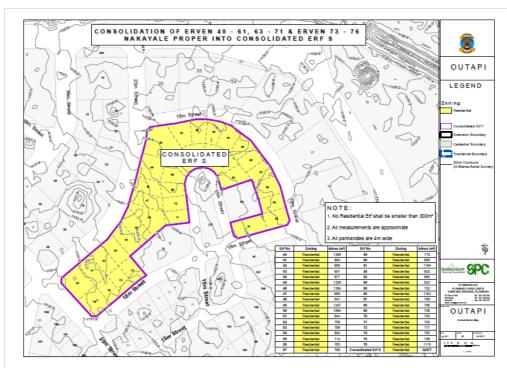

Figure 2-2: Consolidation of Erven 40 – 61, Erven 63 – 71 and Erven 73 – 76, Nakayale Proper into Consolidated Erf S

2.2.2 The Proposed Rezoning

The proponent intends to rezone "Consolidated Erf S", Nakayale Proper from "General Residential" with a density of 1:500 to "Residential" with a density of 1:300 as depicted in **Figure 2-3** below.

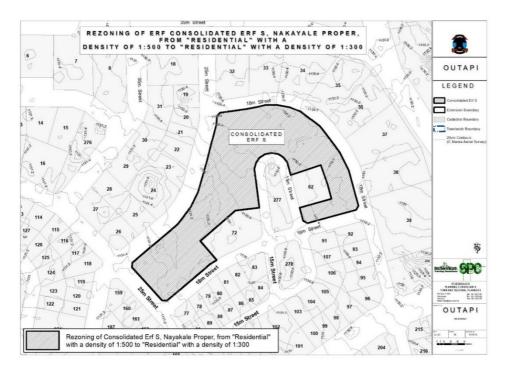

Figure 2-3: Rezoning Map of Consolidated Erf S

2.2.3 The Proposed Subdivisions

The proponent intends to subdivide "Consolidated Erf S", Nakayale Proper into 69 Erven and Remainder of which 4 erven (Erven 67, 68, 69 and Remainder) will be reserved as Street. **Figure 2-4** and **Table 2-3** provides an overview of the intended subdivision.

3 ROLES AND RESPONSIBILITIES

The proponent (Outapi Town Council) is ultimately responsible for the implementation of the EMP, from the planning and design phase to the decommissioning phase (if these developments are in future decommissioned) of these developments. The proponent will delegate this responsibility as the project progresses through its life cycle. The delegated responsibility for the effective implementation of this EMP will rest on the following key individuals:

- Proponent's Representative;
- Environmental Control Officer; and
- Contractor (Construction and Operations and Maintenance).

3.1 **PROPONENTS'S REPRESENTATIVE**

Outapi Town Council should assign the responsibility of managing all aspects of these developments for all development phases (including all contracts for work outsourced) to a designated member of staff, referred to in this EMP as the Proponent's Representative (PR). Outapi Town Council cc may decide to assign this role to one person for the full duration of these developments, or may assign a different PR to each of the development phases – i.e. one for the planning and design phase, one for the construction phase and one for the operation and maintenance phase. The PR's responsibilities are as follows:

Responsibility	Project Phase				
Making sure that the necessary approvals and permissions laid out in Table 4-1 are obtained/adhered to.	 Throughout the lifecycle of these developments 				
Making sure that the relevant provisions detailed in Table 4-2 are addressed during planning and design phase.	 Planning and design phase 				
Monitoring the implementation of the EMP monthly.	ConstructionOperation and maintenance				
Suspending/evicting individuals and/or equipment not complying with the EMP	ConstructionOperation and maintenance				
Issuing fines for contravening EMP provisions	ConstructionOperation and maintenance				

Table 3-1 Responsibilities of PR

3.2 ENVIRONMENTAL CONTROL OFFICER

The PR should assign the responsibility of overseeing the implementation of the whole EMP on the ground during the construction and operation and maintenance phases to an independent external consultant, referred to in this EMP as the Environmental Control Officer (ECO). The PR/ Outapi Town Council may decide to assign this role to one person for both phases and may assign a different ECO for each phase. The ECO will have the following responsibilities during the construction and operation and maintenance phases of these developments:

- Management and facilitation of communication between the, PR, the contractors, and Interested and Affected Parties (I&APs) with regard to this EMP;
- Conducting site inspections (recommended minimum frequency is weekly) of all construction and/or infrastructure maintenance areas with respect to the implementation of this EMP (audit the implementation of the EMP);

- Assisting the Contractor in finding solutions with respect to matters pertaining to the implementation of this EMP;
- Advising the PR on the removal of person(s) and/or equipment not complying with the provisions of this EMP;
- Making recommendations to the PR with respect to the issuing of fines for contraventions of the EMP; and
- Undertaking an annual review and bi-annual audit of the EMP and recommending additions and/or changes to this document.

3.3 CONTRACTOR

Contractors appointed by the Outapi Town Council are automatically responsible for implementing all provisions contained within the relevant chapters of this EMP. Contractors will be responsible for the implementation of this EMP applicable to any work outsourced to subcontractors. **Table 4-3** applies to contractors appointed during the construction phase and **Table 4-4** to those appointed during the operation and maintenance phase. In order to ensure effective environmental management, the aforementioned chapters should be included in the applicable contracts for outsourced construction, operation and maintenance work.

The tables in the following chapter (**Chapter 4**) detail the management measures associated with the roles and responsibilities that have been laid out in this chapter.

4 MANAGEMENT ACTIONS

The aim of the management actions in this chapter of the EMP is to avoid potential impacts where possible. Where impacts cannot be avoided, measures are provided to reduce the significance of these impacts.

The following tables provide the management actions recommended to manage the potential impacts rated in the scoping-level EA conducted for these developments. These management actions have been organised temporally according to project phase:

- Applicable legislation (Table 4-1);
- Planning and design phase management actions (Table 4-2);
- Construction phase management actions (Table 4-3);
- Operation and maintenance phase management actions (Table 4-4); and
- Decommissioning phase management actions (Table 4-5).
- The proponent should assess these **commitments** in detail and should acknowledge their commitment to the specific management actions detailed in the tables below.

4.1 ASSUMPTIONS AND LIMITATIONS

This EMP has been drafted with the acknowledgment of the following assumptions and limitations:

- This EMP has been drafted based on the scoping-level Environmental Assessment (EA) conducted for the proposed development. SPC will not be held responsible for the potential consequences that may result from any alterations to the above-mentioned layout.
- It is assumed that construction labourers will be sourced mostly from the Outapi townlands area and that migrant labourers (if applicable) will be housed in established accommodation facilities within Outapi.

4.2 APPLICABLE LEGISLATION

Legal provisions that have relevance to various aspects of these developments are listed in **Table 4-1** below.

Table 4-1: Legislation applicable to proposed development

LEGISLATION/POLICIES	RELEVANT PROVISIONS	RELEVANCE TO PROJECT
The Constitution of the Republic of Namibia as Amended	Article 91 (c) provides for duty to guard against "the degradation and destruction of ecosystems and failure to protect the beauty and character of Namibia." Article 95(I) deals with the "maintenance of ecosystems,	Sustainable development should be at the forefront of this development.
	essential ecological processes and biological diversity" and sustainable use of the country's natural resources.	
Environmental Management Act No. 7 of 2007 (EMA)	Section 2 outlines the objective of the Act and the means to achieve that.	The development should be informed by the EMA.
	Section 3 details the principle of Environmental Management	
EIA Regulations GN 28, 29, and 30 of EMA (2012)	GN 29 Identifies and lists certain activities that cannot be undertaken without an	The following listed activities are triggered by the proposed development:
	environmental clearance certificate.	Activity 10.1 (b) Infrastructure
	GN 30 provides the regulations governing the environmental assessment (EA) process.	Activity 10.2 (a) Infrastructure
Convention on Biological Diversity (1992)	Article 1 lists the conservation of biological diversity amongst the objectives of the convention.	The project should consider the impact it will have on the biodiversity of the area.
Draft Procedures and Guidelines for conducting EIAs and compiling EMPs (2008)	Part 1, Stage 8 of the guidelines states that if a proposal is likely to affect people, certain guidelines should be considered by the proponent in the scoping process.	The EA process should incorporate the aspects outlined in the guidelines.

LEGISLATION/POLICIES	RELEVANT PROVISIONS	RELEVANCE TO PROJECT
Namibia Vision 2030	Vision 2030 states that the solitude, silence and natural beauty that many areas in Namibia provide are becoming sought after commodities and must be regarded as valuable natural assets.	Care should be taken that the development does not lead to the degradation of the natural beauty of the area.
Water Act No. 54 of 1956	Section 23(1) deals with the prohibition of pollution of underground and surface water bodies.	The pollution of water resources should be avoided during construction and operation of the development.
The Ministry of Environment, Forestry and Tourism (MEFT) Policy on HIV & AIDS	MEFT has recently developed a policy on HIV and AIDS. In addition, it has also initiated a programme aimed at mainstreaming HIV and gender issues into environmental impact assessments.	The proponent and its contractor must adhere to the guidelines provided to manage the aspects of HIV/AIDS. Experience with construction projects has shown that a significant risk is created when migrant construction workers interact with local communities.
Urban and Regional Planning Act No 5 of 2018	To consolidate the laws relating to urban and regional planning; to provide for a legal framework for spatial planning in Namibia; to provide for principles and standards of spatial planning; to establish the urban and regional planning board; to decentralise certain matters relating to spatial planning; to provide for the preparation, approval and review of the national spatial development framework, regional structure plans; to provide for the preparation, approval, review and amendment of zoning schemes; to provide for the establishment of townships; to provide for the alteration of boundaries of approved townships, to provide for the disestablishment of approved townships; to provide for the change of name of approved townships; to provide for the subdivision and consolidation of land; to provide	The proposed development must adhere to the provisions regarding the subdivision and rezoning of land.

LEGISLATION/POLICIES	RELEVANT PROVISIONS	RELEVANCE TO PROJECT
	for the alteration, suspension and deletion of conditions relating to land; and to provide for incidental matters.	
Local Authorities Act No. 23 of 1992	The Local Authorities Act prescribes the manner in which a town or municipality should be managed by the Town or Municipal Council.	The development must comply with provisions of the Local Authorities Act.
Labour Act no. 11 of 2007	Chapter 2 details the fundamental rights and protections. Chapter 3 deals with the basic conditions of employment.	Given the employment opportunities presented by the development, compliance with the labour law is essential.
National Heritage Act No. 27 of 2004	The Act is aimed at protecting, conserving and registering places and objects of heritage significance.	All protected heritage resources (e.g. human remains etc.) discovered, need to be reported immediately to the National Heritage Council (NHC) and require a permit from the NHC before they may be relocated.
Roads Ordinance 17 of 1972	 Section 3.1 deals with width of proclaimed roads and road reserve boundaries Section 27.1 is concerned with the control of traffic on urban trunk and main roads Section 36.1 regulates rails, tracks, bridges, wires, cables, subways or culverts across or under proclaimed roads Section 37.1 deals with Infringements and obstructions on and interference with proclaimed roads. 	Adhere to all applicable provisions of the Roads Ordinance.
Public and Environmental Health Act of 2015	This Act (GG 5740) provides a framework for a structured uniform public and environmental health system in Namibia. It covers notification, prevention and control of diseases and sexually	Contractors and users of the proposed development are to comply with these legal requirements.

LEGISLATION/POLICIES	RELEVANT PROVISIONS	RELEVANCE TO PROJECT
Nature Conservation Ordinance no. 4 of 1975	transmitted infections; maternal, ante-natal and neo-natal care; water and food supplies; infant nutrition; waste management; health nuisances; public and environmental health planning and reporting. It repeals the Public Health Act 36 of 1919 (SA GG 979). Chapter 6 provides for legislation regarding the protection of	Indigenous and protected plants must be managed within the legal
Water Quality Guidelines for Drinking Water and Wastewater Treatment	indigenous plants Details specific quantities in terms of water quality determinants, which wastewater should be treated to before being discharged into the environment	confines. These guidelines are to be applied when dealing with water and waste treatment
Environmental Assessment Policy of Namibia (1995)	The Policy seeks to ensure that the environmental consequences of development projects and policies are considered, understood and incorporated into the planning process, and that the term ENVIRONMENT is broadly interpreted to include biophysical, social, economic, cultural, historical and political components.	This EIA considers this term of Environment.
Water Resources Management Act No. 11 of 2013	Part 12 deals with the control and protection of groundwater Part 13 deals with water pollution control	The pollution of water resources should be avoided during construction and operation of the development. Should water need to be abstracted, a water abstraction permit will be required from the Ministry of Water, Agriculture and Forestry.
Forest Act 12 of 2001 and Forest Regulations of 2015	To provide for the establishment of a Forestry Council and the appointment of certain officials; to consolidate the laws relating to the management and use of	Protected tree and plant species as per the Forest Act No 12 of 2001 and Forest Regulations of 2015 may not be removed without

LEGISLATION/POLICIES	RELEVANT PROVISIONS	RELEVANCE TO PROJECT
	forests and forest produce; to provide for the protection of the environment and the control and management of forest fires; to repeal the Preservation of Bees and Honey Proclamation, 1923 (Proclamation No. 1of 1923), Preservation of Trees and Forests Ordinance, 1952 (Ordinance No. 37 of 1952) and the Forest Act, 1968 (Act No. 72 of 1968); and to deal with incidental matters.	a permit from the Department of Forestry.
Atmospheric Pollution Prevention Ordinance No 45 of 1965	 Part II - control of noxious or offensive gases, Part III - atmospheric pollution by smoke, Part IV - dust control, and Part V - air pollution by fumes emitted by vehicles. 	The development should consider the provisions outlined in the act. The proponent should apply for an Air Emissions permit from the Ministry of Health and Social Services (if needed).
Hazardous Substance Ordinance 14 of 1974	To provide for the control of substances which may cause injury or ill-health to or death of human beings by reason of their toxic, corrosive, irritant, strongly sensitizing or flammable nature or the generation of pressure thereby in certain circumstances; to provide for the division of such substances into groups in relation to the degree of danger; to provide for the prohibition and control of the importation, manufacture, sale, use, operation, application, modification, disposal or dumping of such substances; and to provide for matters connected therewith.	The handling, usage and storage of hazardous substances on site should be carefully controlled according to this Ordinance.

LEGISLATION/POLICIES	RELEVANT PROVISIONS	RELEVANCE TO PROJECT
Soil Conservation Act No	Act to consolidate and amend the	The proposed activity should
76 of 1969	law relating to the combating and	ensure that soil erosion and soil
	prevention of soil erosion, the	pollution is avoided during
	conservation, improvement and	construction and operation.
	manner of use of the soil and	
	vegetation and the protection of	
	the water sources	

4.3 PLANNING AND DESIGN PHASE

The PR should ensure that the management actions detailed below should be adhered to during the period before the construction of the development starts.

Table 4-2:	Planning and design management actions
------------	--

Aspect	Management Actions
Flora and Fauna (Biodiversity)	 Do not clear cut the entire development site, but rather keep the few individual trees/shrubs not directly affecting the developments as part of the landscaping. Protected trees are not to be removed without a valid permit from the Department of Forestry.

4.4 CONSTRUCTION PHASE

The management actions listed in **Table 4-3** apply during the construction phase. This table may be used as a guide when developing EMPs for other construction activities within these development areas.

Environmental Feature	Impact	Management Actions	Responsible Person
EMP training	Lack of EMP awareness and the implication s thereof.	 All construction workers are to undergo EMP training that should include as a minimum the following: Explanation of the importance of complying with the EMP. Discussion of the potential environmental impacts of construction activities. Employees' roles and responsibilities, including emergency preparedness. Explanation of the mitigation measures that must be implemented when particular work groups carry out their respective activities. 	Contractor, PR
Conservation of vegetation	Loss of biodiversity	 The layout and development design should incorporate existing trees1. Protected trees are not to be removed without a valid permit from the local Department of Forestry The plants that are to be kept should be clearly marked with "danger tape" to prevent accidental removal or damage. Regular inspection of the marking tool should be carried out. Only a limited width +/- 5 m on the side of roads may be partially cleared of vegetation. 	Contractor

Table 4-3:Construction phase management actions

¹a "tree" is defined as an indigenous woody perennial plant with a trunk diameter \ge 150 mm.

Environmental Feature	Impact	Management Actions	Responsible Person
		 Workers are prohibited from collecting wood or other plant products on or near work sites. No alien species may be planted on or near work areas. 	
Lay-down areas and materials camp	Loss of biodiversity	 Suitable locations for the contractors lay-down areas and materials camp should be identified with the assistance of the PR and the following should be considered in selecting these sites: The areas designated for the services infrastructure should be used as far possible. Second option should be degraded land. Avoid sensitive areas (e.g. rivers/drainage lines). 	Contractor and PR
Hazardous waste	Contaminat ion of surface and groundwat er sources.	 All heavy construction vehicles and equipment on site should be provided with a drip tray. All heavy construction vehicles should be maintained regularly to prevent oil leakages. Maintenance and washing of construction vehicles should take place only at a designated workshop area and should not take place on open soil. 	Contractor
Water, Sewage and grey water	Contaminat ion of surface and groundwat er sources and water wasting	 The wash water (grey water) collected from the cleaning of equipment on-site should not be left standing for long periods of time as this promotes parasite and bacterial proliferation. Grey water should be recycled: Used for dust suppression; 	Contractor

Environmental Feature	Impact	Management Actions	Responsible Person
		 Used to water a vegetable garden, or to support a small nursery; Used (reused) to clean equipment. Grey water that is not recycled should be removed on a regular basis. 	
		 No dumping of waste products of any kind in or in close proximity to water bodies. Heavy construction vehicles should be kept out of any water bodies and the movement of construction vehicles should be limited where possible to the existing roads and tracks. Ensure that oil/ fuel spillages from construction vehicles and machinery are minimised and that where these occur, that they are appropriately dealt with. Drip trays must be placed underneath construction vehicles when not in use to contain all oil that might be leaking from these vehicles. Contaminated runoff from the construction sites should be prevented from entering the surface and ground water bodies. All materials on the construction site should be properly stored. Disposal of waste from the sites should be properly managed and taken to the designated landfill site in Outapi. Construction workers should be given ablution facilities at the 	

Environmental Feature	Impact	Management Actions	Responsible Person
		 construction sites that are located at least 30 m away from any surface water and ground water resources and should be regularly serviced. Washing of personnel or any equipment should not be allowed on site. Should it be necessary to wash construction equipment these should be done at an area properly suited and prepared to receive and contain polluted waters. 	
General waste	Visual impact and soil contaminati on	 The construction site should be kept tidy at all times. All domestic and general construction waste produced on a daily basis should be cleaned and contained daily. No waste may be buried or burned. Waste containers (bins) should be emptied regularly and removed from site to a recognised (municipal) waste disposal site. All recyclable waste needs to be taken to the nearest recycling depot where practical. A sufficient number of separate bins for hazardous and domestic/general waste must be provided on site. These should be clearly marked as such. Construction labourers should be sensitised to dispose of waste in a responsible manner and not to litter. No waste may remain on site after the completion of the project. 	Contractor

Environmental Feature	Impact	Management Actions	Responsible Person
Topsoil	Loss of topsoil and associated opportunity costs	 When excavations are carried out, topsoil² should be stockpiled in a demarcated area. Stockpiled topsoil should be used to rehabilitate post-construction degraded areas and/or other nearby degraded areas if such an area is located a reasonable distance from the stockpile. 	Contractor
Rehabilitation	Visual impact	 Upon completion of the construction phase consultations should be held with the local community/property owner(s) regarding the post-construction use of remaining excavated areas (if applicable). In the event that no post-construction uses are requested, all excavated/degraded areas need to be rehabilitated as follows: Excavated areas may only be backfilled with clean or inert fill. No material of hazardous nature (e.g. sand removed with an oil spill) may be dumped as backfill. Rehabilitated excavated areas need to match the contours of the existing landscape. The rehabilitated area should not be higher (or lower) than nearby drainage channels. This ensures the efficiency of revegetation and reduces the chances of potential erosion. Topsoil is to be spread across excavated areas evenly. 	Contractor, PR

 $^{^{2}}$ Topsoil is defined here as the top 150mm of surface material, which accounts for the seedbank.

Environmental Feature	Impact	Management Actions	Responsible Person
		 Deep ripping of areas to be rehabilitated is required, not just simple scarification, so as to enable rip lines to hold water after heavy rainfall. Ripping should be done along slopes, not up and down a slope, which could lead to enhanced erosion. 	
Road safety	Injury or loss of life	 Demarcate roads to be used by construction vehicles clearly. Off-road driving should not be allowed. All vehicles that transport materials to and from the site must be roadworthy. Drivers that transport materials should have a valid driver's license and should adhere to all traffic rules. Loads upon vehicles should be properly secured to avoid items falling off the vehicle. 	Contractor
Safety around work sites	Injury or loss of life	 Excavations should be left open for the shortest time possible. Excavate short lengths of trenches and box areas for services or foundations in a manner that will not leave the trench unattended for more than 24 hours. Demarcate excavated areas and topsoil stockpiles with danger tape. All building materials and equipment are to be stored only within set out and demarcated work areas. Only road construction personnel will be allowed within these work areas. 	Contractor

Environmental Feature	Impact	Management Actions	Responsible Person
		• Comply with all waste related management actions stated above in this table.	
Ablutions	Non- compliance with Health and Safety Regulations	 Separate toilets should be available for men and women and should clearly be indicated as such. Portable toilets (i.e. easily transportable) should be available at every construction site: 1 toilet for every 15 females. 1 toilet for every 30 males. Sewage needs to be removed on a regular basis to an approved (municipal) sewage disposal site in Outapi. Alternatively, sewage may be pumped into sealable containers and stored until it can be removed. Workers responsible for cleaning the toilets should be provided with environmentally friendly detergents, latex gloves and masks. 	Contractor
Open fires	Injury or loss of life	 No open fires may be made anywhere on site. 	Contractor
General health and safety	Injury or loss of life	 A fully stocked first aid kit should permanently be available on-site as well as an adequately trained member of staff capable of administering first aid. All workers should have access to the relevant personal protective equipment (PPE). 	Contractor

Environmental Feature	Impact	Management Actions	Responsible Person
		 Sufficient potable water reserves should be available to workers at all times. No person should be allowed to smoke close to fuel storage facilities or portable toilets (if toilets are chemical toilets – the chemicals are flammable). No workers should be allowed to drink alcohol during work hours. No workers should be allowed on site if under the influence of alcohol. Building rubble and domestic waste should be stored in skips. Condoms should be accessible/available to all construction workers. Access to Antiretroviral medication should be facilitated. 	
Dust	Nuisance and health impacts	 A watering truck should be used on gravel roads with the heaviest vehicle movement especially during dry and windy conditions. However, due consideration should be given to water restrictions during times of drought. The use of waterless dust suppression means (e.g. lignosulphonate products such as Dustex) should be considered. Cover any stockpiles with plastic to minimise windblown dust. Dust protection masks should be provided to workers if they complain about dust. 	Contractor

NoiseNuisance impactsWork hours should be restricted to between 08h00 and 17h00 where construction involving the use of heavy equipment, power tools and the movement of heavy vehicles is less than 500 m from residential areas. If an exception to this provision is required, all residents within the 500 m radius should be given 1 week's written notice.ContractorRecruitment of labourersNegative conflict regarding recruitmentThe Contractor should adhere to the below provision as a minimum for the recruitment of labour: • Adhere to the legal provisions in the Labour Act for the recruitment of labour (target percentages for gender balance, optimal use of local labour and SME's, etc.).Contractors are aware of recommended recruitment procedures and discourage any recruitment of labour outside these agreed upon procedures.	Environmental Feature	Impact	Management Actions	Responsible Person

 In terms of recruitment of sub- contractors and individual labourers to those who are qualified and from the Outapi project area and only then look to surrounding towns. Clearly explain to all jobseekers the terms and conditions of their respective employment contracts (e.g. period of employment etc.) – 		conflict regarding	 below provision as a minimum for the recruitment of labour: Adhere to the legal provisions in the Labour Act for the recruitment of labour (target percentages for gender balance, optimal use of local labour and SME's, etc.). Recruitment should not take place at construction sites. Ensure that all sub-contractors are aware of recommended recruitment procedures and discourage any recruitment of labour outside these agreed upon procedures. Contractors should give preference in terms of recruitment of sub-contractors and individual labourers to those who are qualified and from the Outapi project area and only then look to surrounding towns. Clearly explain to all jobseekers the terms and conditions of their respective employment contracts 	Contractor

Environmental Feature	Impact	Management Actions	Responsible Person
Communication plan	Negative conflict with I&APs	 The Contractor or proponent should draft a Communication Plan, which should outline as a minimum the following: How Interested and Affected Parties (I&APs), who require ongoing communication for the duration of the construction period, will be identified and recorded and who will manage and update these records. How these I&APs will be consulted on an ongoing basis. Make provision for grievance mechanisms – i.e. how concerns can be lodged/ recorded and how feedback will be delivered as well as further steps of arbitration in the event that feedback is deemed 	Contractor
General communication	Negative conflict with I&APs	 unsatisfactory. The PR must appoint an ECO to liaise between the Contractor, I&APs, Developer. The Contractor shall at every monthly site meeting report on the status of the implementation of all provisions of the EMP. The Contractor should implement the EMP awareness training as stipulated above in this table. The Contractor must list the I&APs of the project and their contact details with whom ongoing communication would be required for the duration of the contract. This list, together with the Communication Plan must be agreed upon and given to the PR before construction commences. 	Contractor, ECO, PR

Environmental Feature	Impact	Management Actions	Responsible Person
		 The Communication Plan, once agreed upon by the Developer, shall be legally binding. All communication with the I&APs must take place through the ECO. A copy of the EMP must be available 	
		 at the site office and should be accessible to all I&APs. Key representatives from the abovementioned list need to be invited to attend monthly site meetings to raise any concerns and issues regarding project progress. The Contractor should liaise with the Developer regarding all issues related to community consultation and negotiation before construction commences. 	
		 A procedure should be put in place to ensure that concerns raised have been followed-up and addressed. All people on the I&APs list should be informed about the availability of the complaints register and 	
		associated grievance mechanisms in writing by the PR prior to the commencement of construction activities.	
Archaeology	Loss of heritage resources	 Should a heritage site or archaeological site be uncovered or discovered during the construction phase of the project, a "chance find" procedure should be applied in the order they appear below: If operating machinery or equipment, stop work; 	Contractor

Environmental Feature	Impact	Management Actions	Responsible Person
		 Demarcate the site with danger tape; Determine GPS position if possible; Report findings to the construction foreman; Report findings, site location and actions taken to superintendent; Cease any works in immediate vicinity; Visit site and determine whether work can proceed without damage to findings; 	
		 Determine and demarcate exclusion boundary; Site location and details to be added to the project's Geographic Information System (GIS) for field confirmation by archaeologist; 	
		 Inspect site and confirm addition to project GIS; Advise the National Heritage Council of Namibia (NHCN) and request written permission to remove findings from work area; and 	
		 Recovery, packaging and labelling of findings for transfer to National Museum. Should human remains be found, the following actions will be required: Apply the chance find procedure as described above; Schedule a field inspection with 	
		an archaeologist to confirm that remains are human;	

Environmental Feature	Impact	Management Actions	Responsible Person
		 Advise and liaise with the NHCN and Police; and 	
		 Remains will be recovered and removed either to the National Museum or the National Forensic Laboratory. 	

4.5 OPERATION AND MAINTENANCE PHASE

The management actions included in **Table 4-4** below apply during the operation and maintenance phase of these developments.

Environmental	Impact	Management Actions	Person
Feature	inpact	Management Actions	Responsible
EMP training	Lack of EMP awareness and the implications thereof	All contractors appointed for maintenance work on the respective streets must ensure that all personnel are aware of necessary health, safety and environmental considerations applicable to their respective work.	Contractor
Water	Surface and groundwater contamination	Ensure that surface run-off water accumulating on-site are channeled and captured through a proper storm water management system to be treated in an appropriate manner before disposal into the environment.	Proponent, Contractor,
Aesthetics	Visual impacts	 The proponent should consult with a view to incorporate the relevant local/national/international development guidelines which addresses the following: The incorporation of indigenous vegetation into the development. To mark the area with appropriate road warning signs (e.g. the road curves to the left/right) 'Green' technologies should be implemented within the architectural designs and building materials of the development where possible in order to minimise the visual prominence of such a development within the more natural surrounding landscape. 	Proponent

 Table 4-4:
 Operation and maintenance management actions

Environmental Feature	Impact	Management Actions	Person Responsible
		 keep existing trees, introduce tall indigenous trees; keep structures unpainted and minimizing large advertising billboards 	
Noise	Nuisance impacts	 No activity having a potential noise impact should be allowed after 18:00 hours if possible. Do not allow commercial activities that generate excessive noise levels. Continuous monitoring of noise levels should be conducted to make sure the noise levels does not exceed acceptable limits. 	Proponent
Socio- Economic	Social Impacts	The local community be consulted in terms of possible job creation opportunities and must be given first priority if unspecialised job vacancies are available.	Proponent

4.6 DECOMMISSIONING PHASE

The decommissioning of these developments is not foreseen as the intended development is envisaged to be permanent. In the event that this infrastructure development is decommissioned the following management actions should apply.

Table 4-5: Decommissioning phase management actions

Environmental Feature	Management Actions
Decommissioning	The decommissioning of the street is not anticipated for the
activity	development at this stage. Should the street need to be closed off in future an application for permanent closure and rezoning would have to be submitted to the Outapi Town Council and the Ministry of Urban and Rural Development respectively.

5 CONCLUSION

The management actions included in this report aim to assist in the avoidance, management and/or mitigation of potential impacts on the environment that may result from the proposed activities.

Should the measures recommended in this EMP be implemented and monitored, SPC is confident that the risks identified in the FESR can be reduced to acceptable levels.
