**ENVIRONMENTAL SCOPING ASSESSMENT (ESA)
FOR EXCLUSIVE PROSPECTING LICENSE (EPL) No.
EPL 5851 LOCATED EAST OF KLEIN AUB IN THE
HARDAP REGION, NAMIBIA**

Environmental Assessment Practitioner:

Excel Dynamic Solutions (Pty) Ltd

Proponent:

Unique Capital Investment (Pty) Ltd

1 INTRODUCTION AND BACKGROUND

Unique Capital Investment (Pty) Ltd (hereinafter referred to as The Proponent), has applied to the Ministry of Mines and Energy (MME) to be granted the Exclusive Prospecting License (EPL) No. 5851. The license was granted to The Proponent on the 11th December 2018 and expired on the 10th December 2021. Thus, a renewal application has been lodged. The area of the EPL is 1801. 0745 ha, and is located on the immediate east of Klein Aub in the Hardap Region (**Figure 1**). The EPL has potential for commodities such as Base & Rare Metals, Industrial Minerals and Precious Metals. However, the target commodities of this project are: **Base & Rare Metals**.

Prospecting, exploration and all the mining related activities are among listed activities that may not be undertaken without an ECC under the Environmental Management Act (EMA) (2007) and its 2012 Environmental Impact Assessment (EIA) Regulations. The relevant listed activities as per EIA regulations are:

- 3.1 *The construction of facilities for any process or activities which requires a license, right of other forms of authorization, and the renewal of a license, right or other form of authorization, in terms of the Minerals (Prospecting and Mining Act, 1992).*
- 3.2 *other forms of mining or extraction of any natural resources whether regulated by law or not.*
- 3.3 *Resource extraction, manipulation, conservation and related activities.*

The Proponent is, therefore, required to obtain an ECC before commencement of works on the EPL. To fulfill the legal requirements, the Proponent has appointed Excel Dynamic Solutions (Pty) Ltd, an independent team of Environmental Consultants, to conduct the required Environmental Assessment (EA) process and submit the ECC application to the Department of Environmental Affairs and Forestry (DEAF) at the Ministry of Environment, Forestry & Tourism (MEFT).

Figure 1: The locality map of EPL 5851 in the Hardap Region

2 PURPOSE OF THIS DOCUMENT

It should be noted that the Background Information Document (BID) is not an EA Report but a non-technical summary of the EA, aimed for information purposes and a basis for public involvement from the beginning of the EA process. The motivation behind this document is to:

- Briefly introduce the proposed project and related activities to potential interested and affected parties (I&APs)/stakeholders.
- Give background information to I&APs of the task, along these lines giving a chance to them (I&APs) to get information, remark and raise issues with respect to the approval measure.
- Invite members of the public to register as I&APs and get added to the EA database so that they can stay

informed about the EA progress throughout its process; and

- Provide all I&APs with an opportunity to comment or provide inputs/concerns on the proposed project activities, which entails concerns/issues on the
- biophysical and socio-economic aspects, and any other issues of concern related to the proposed project. The information from I&APs will then form basis of the EA and EMP documents that will help the regulatory and competent authorities (MEFT and Ministry of Mines & Energy (MME), respectively) to pass judgment on the acceptability of the undertaking.

3 NEED AND DESIRABILITY OF PROPOSED ACTIVITY

Mining sector plays a vital role in economic development of many countries. In Namibia, mining sectors are the backbone of the economy since time-immemorial in view of having a positive impact on the economy measured through job creation and income generation, among others. Mining is also an important source of government fiscal receipt and source of foreign exchange. In addition, mining sector forms a vital part of some of

Namibia's development plans, such as the Vision 2030, National Development Plan 5 (NDP5) and Harambee Prosperity Plans (HPPs) I and II. Mining contributes to meeting the ever-increasing global demand for minerals, and for national prosperity. In Namibia, prospecting and exploration for mining purposes occurs mainly within the private sector. Therefore, successful exploration on EPL 5851 would lead to the mining phase of the targeted commodities, which would feed into the national development plans.

4 PROJECT DESCRIPTION

The proposed activities will entail the detailed exploration activities and delineating the mineral deposits to determine whether the deposits for targeted commodities are economically feasible (to advance to the resources development and mining phase). The prospecting and exploration of minerals are the first components of any potential mining project (development and eventual mining). This is done to acquire the necessary data required for further decision making and investment options. These activities are anticipated to last for about two - three years. The planned activities and required resources and infrastructure

are briefly described below. The detailed exploration methods (techniques) will be presented in the ESA Report. The proposed phased approach for the exploration works is presented below. However, it should be noted that these activities will only be undertaken upon the approval of the ESA Report and issuance an ECC by the Environmental commissioner. Once the Proponent has been issued with the ECC and obtained all relevant and required permitting licensing (such as consent and land use agreements), and ready to commence with the actual exploration activities (with financial, technical, and human resources in place), the planned activities will commence on site.

4.1 Project Processes

The proposed exploration activities (methods) are divided into the following categories:

- **Phase 1: Non-invasive techniques (prospecting)** - This will include geological field mapping and ground-based surveys, reviewing of existing geological maps and historical drilling data as well as field evaluation and sampling,

- **Phase 2: Invasive techniques (detailed exploration)** – the techniques involved herein include soil survey, rock sampling, trenching, and/ or pitting and detailed exploration drilling.
- With regards to Phase 2, once the target areas have been selected and verified under the prospecting phase, detailed exploration works will follow. The preferred drilling technique for this exploration programme is Reverse Circulation (RC) Drilling. RC drilling uses a pneumatic hammer, which drives a rotating tungsten-steel bit. The technique produces an uncontaminated large volume sample, which is comprised of rock chips. It is relatively quick and cheap when compared to other techniques like Diamond Drilling. However, if found to be necessary, diamond drilling may also be considered for this exploration programme, during advanced stages of exploration if large amounts of sample material may be required for analysis and to perform processing trials.
- The selection of the potential mineralization model and exploration targets will be based on the local geology, trenching, drilling, and assay results of the samples collected.

4.2 Human Resources, Services, and infrastructure

The following services and infrastructure as provided below will be required for the project activities:

- **Human resources and accommodation:** Around 16 people will be employed on site during the exploration phase. The workforce will include both skilled, semi and unskilled people, as necessary to complete the work. The exploration workforce will be accommodated at Klein Aub upon reaching an agreement and a consent is signed between the Proponent and the respective custodian (authority) prior to setting up accommodation structures (tented camps).
- **Working Space (Administration and Control):** Movable shade facility near the working spots and prefabricated temporary offices will be erected on site (subject to approval of custodian/authority).

- **Water supply:** Around 4500 litres of water will be required for the activities per month. This water will be used for cooling down and washing of equipment, drilling related activities, and ablution. The water will be sourced from elsewhere and transported to site. Therefore, no project related water abstraction will be done onsite or within the site area. Potable water will also be made available for the exploration crew (workers) on site.
- **Fuel supply:** (for personnel use to cook): The Proponent will provide fuel to be used for food preparation by the site workers. No firewood will be collected on the farms or neighbouring land, without the owners or authority's permission.
- **Fuel Supply (machinery and equipment):** 2000-litre diesel will be used for machinery and equipment and fuel generator, per month.
- **Accessibility (roads):** the EPL is accessible via C24 road from Klein Aub which connects to gravel roads leading to the EPL. Therefore, project related vehicles will be using these existing roads to access the EPL. It is also anticipated that, if necessary, onsite new tracks to the different targeted exploration sites within the EPL will be created. The Proponent may need to do some upgrade on the site access road to ensure that it is fit to accommodate project related vehicles, such as heavy trucks.
- **Waste management:** the different waste will be handled as follows:
 - **Sewage:** Flush toilets ablution facilities will be provided on site using existing sewer systems near the EPL.
 - **General and domestic waste:** enough waste bins (containers) will be made available at both exploration sites and campsite for waste storage. The bins will be emptied into the main onsite container for disposal at the nearest landfill site, when necessary (upon reaching full capacity of the main waste container onsite).

- **Hazardous waste:** All vehicles, machinery and fuel consuming equipment will be provided with drip trays to capture potential fuel spills and waste oils. The waste fuel/oils will be carefully stored in a standardized container until such a time that it can be disposed of at the nearest approved hazardous waste management facility. The nearest considered facility town is Klein Aub; therefore, waste disposal agreement will be reached between the Proponent and the Town Council.
- **Health and Safety:** Adequate and appropriate Personal Protective Equipment (PPE) will be provided to every project personnel while on and working at site. A minimum of two first aid kits will be readily available at exploration sites to attend to potential minor injuries, while major injuries will need to be attended to further by transporting the injured to the nearest health centre for treatment and needed care.
- **Potential Accidental Fire Outbreaks:** A minimum of basic firefighting equipment, i.e., two fire extinguishers will be readily available in vehicles, at the working sites and campsite.

4.3 Project Equipment, Material, Machinery and Vehicles

The following equipment and machinery will be required:

- 4X4 bakkies
- Truck
- Excavator / front-end loader to scoop up sandy overburden
- Dozers (to clear vegetation along planned drilling site access roads)
- Drilling fluids stored in manufacturers approved containers
- Diesel generator for power supply

These equipment, machinery and vehicles will be kept at a designated storage site that will be established within the EPL.

4.2 Decommissioning: Rehabilitation of Explored Sites

Decommissioning refers to the cessation of exploration activities, either upon discovering an economic feasible and worthy deposit or in the event of unsuccessful exploration results works. Thus, the Proponent will need to properly decommission the activity to either prepare the selected area of the EPL for the mining phase or upon a non-successful exploration abandon on the explored and rehabilitated sites.

5 ENVIRONMENTAL ASSESSMENT

This ESA process is conducted in accordance with the provisions stated out in the Environmental Management Act (No 7 of 2007) and its' Environmental Impact Assessment Regulations (2012). The primary objective of the EA will be to identify potential negative impacts associated with the proposed activity, assess them, and recommend practical and effective mitigation measures to be implemented by the Proponent, to minimize these impacts, while maximizing positive impacts.

The main objectives of this ESA are to:

- Comply with Namibia's Environmental Management Act (2007) and its EIA regulations (2012).
- Identify potential impacts associated with the proposed Activity.
- Inform Interested and Affected Parties (I&APs) and relevant authorities about the exploration activities and to provide them with a reasonable opportunity to participate during the EA process.
- Assess the significance of issues and concerns raised.

- Compile a report addressing all identified issues and potential impacts related to various aspects of the activity.
- Compile a Draft Environmental Management Plan (EMP) which includes impacts' management and mitigation measures.

5.1 Potential Impacts

The following potential impacts have been identified so far for the surrounding towns, settlements, and property:

Positive:

- Socio-economic development through employment creation (primary, secondary, and tertiary employment) and skills transfer,
- Open other investment opportunities and infrastructure-related development benefits,
- Produce a trained workforce and small businesses that can service communities and may initiate related businesses,
- Boosting the local economic growth and regional economic development.

- Improved geological understanding of the area regarding targeted commodities, and
- Open other investment opportunities and infrastructure-related development benefits.
- Increased support for local businesses through the procurement of consumable items such as Personal Protective Equipment (PPE), machinery spare parts, lubricants, etc.

Negative:

- **Potential disturbance of existing pastoral systems,**
- **Physical land / soil disturbance:** The invasive exploration activities could possibly lead to soil disturbance. The potential damage to subgrade due to traffic compaction along access roads,
- **Impact on local biodiversity (fauna and flora) and habitat disturbance:** some vegetation may be disturbed by e.g., by off road driving or being removed to create access roads and working spaces. There are possibilities of illegal hunting (wildlife and domesticated animal) in the surrounding areas.

- **Potential impact on water resources and soils particularly due to pollution,**
- **Air quality issue:** dust may be generated from driving on site, surface excavation, drilling, and diamond wire sawing from could temporarily compromise the surrounding air,
- **Visual impacts due to scars** – May occur on the landscape and relief on the affected sites of the EPL,
- **Potential occupational health and safety risks** May occur due to movement / operating of machinery and equipment on site.
- **Vehicular traffic safety and impact on services infrastructure** such as local roads: the temporary potential increase in vehicular traffic during exploration may exert additional pressure on the local roads, especially by heavy vehicles such as trucks carrying project materials and equipment (drilling rig),
- **Vibrations and noise** associated with drilling activities may be a nuisance to locals,

- **Environmental pollution** through different types of waste generated on the site, particularly from the mishandling of hydrocarbons (fuels) and wastewater,
- **Archaeological or cultural heritage impact** through unintentional uncovering of unknown archaeological objects or sites by certain project activities such as exploration drilling and excavation as well as known and marked heritage sites on targeted sites on the EPL and surroundings,
- **Potential social nuisance and conflicts** between affected farmers / landowners and or neighbouring land users and Proponent due to the lack of communication or cooperation on raised issues and land use during exploration.

The potential impacts listed above are pre-identified and therefore should not be deemed as final or the only ones. Other potential impacts will be identified as the EA process progresses i.e., upon site visit and consultation with the public (I&APs). All impacts and public concerns/comments will be incorporated and addressed in the Environmental Assessment Report and EMP.

5.2 Public Consultation

Public consultation is an important part of the EA process. During the consultation process, interested or affected members of the public are given an opportunity to find out more about the activity and raise any issues or concerns pertaining to the environmental assessment.

To comment or receive further information on the project, **please register with Excel Dynamic Solutions (Pty) Ltd** (contact details herein) as an Interested and Affected Party (I&AP) **before or on Tuesday, the 28th of February 2022.**

All registered I&APs will be kept informed throughout the various stages of the project and will be provided the opportunity to comment on the Scoping (ESA) Report.

Furthermore, you are hereby invited to the Public Consultation Meeting scheduled as follows:

- **Date: 15 February 2022**
- **Time: 10h00**
- **Venue: Klein Aub Settlement Office Hall**

PUBLIC CONSULTATION MEETING MINUTES:

ENVIRONMENTAL SCOPING ASSESSMENT (ESA) FOR THE PROPOSED PROSPECTING & EXPLORATION ACTIVITIES ON EXCLUSIVE PROSPECTING LICENCE (EPL) NO. 5851 NEAR KLEIN AUB IN THE REHOBOTH DISTRICT OF THE HARDAP REGION, NAMIBIA

Date: Tuesday, 15 February 2022

Time: 10h00 (started 11h00) – 12h15

Venue: Klein Aub Community Hall

The Public Consultation Meeting was attended by twenty-five (28) people, including three (3) Environmental Consultants from Excel Dynamic Solutions (Pty) Ltd (EDS). - **Please refer to the attached attendance register.**

COVID-19 REGULATIONS ADHERENCE

To ensure that the meeting, as a form of gathering complies with the COVID-19 Regulations, the chairs were set up in a way that social distancing between the people is observed and every attendee had a face mask on.

INTRODUCTION AND WELCOMING REMARKS

The meeting was officially opened by Ms. Althea Brandt of EDS. She expressed gratitude to everyone in attendance for making time to attend the meeting and apologized for being late.

The meeting attendance register was then circulated for the attendees to write down their names, contact details and sign so that they could be added to the list of interested and affected parties (I&APs) and receive further information on the Environmental Scoping Assessment (ESA) process.

MEETING AGENDA AND PRESENTATION

The agenda of the meeting included the following main points:

2.1 Brief Description of the Project

The Environmental Impact Assessment (EIA)/ Environmental Scoping Assessment (ESA). The Proponent (Unique Capital Investments) appointed Excel Dynamic Solutions (Pty) Ltd (EDS), an independent environmental consultant to carry out the EIA and apply for the environmental clearance certificate (ECC).

2.2 Explanation of what an ESA is, its Process and the Public Role in the Process

Ms. Althea Brandt explained to the attendees what the meeting was all about and why they were invited (with reference to the Environmental Management Act (EMA) No. 7 of 2007 and its 2012 Environmental Impact Assessment (EIA) Regulations on Public Consultation). Mr. Silas took over and further explained what an ESA is and that the proposed exploration activities are one of the listed activities in the 2012 EIA Regulations of the EMA that cannot be undertaken without an ECC from the Environmental Commissioner. Ms. A. Brandt translated the presentation in Afrikaans.

2.3 Presentation of Potential Project Impacts

To ensure transparency and that the attendees understand both sides of the proposed project activities, the Environmental Consultants also presented the potential pre-identified potential positive & negative environmental and social impacts.

2.4 Public Open Discussion (Interactive Session)

Ms. Brandt provided the meeting attendees the opportunity to raise their concerns/issues and or comment on the proposed project activities. The issues and comments recorded are presented in **Table 1** below.

Table 1: Comments and issues raised during the public meeting on Klein Aub on the 15th of February 2022

Comment/ issue No.	Commenter name & issue / comment / question	Response and name of responder:
1.	<p>Mr. Nicholas Eiman: With the current scarcity of water and it being so extremely dry, it will be best if we could get everything in writing of exactly what will be done and how the EPL holder plans to run operations and how impacts will be mitigated. But telling us all these things in person won't make a difference.</p>	<p>Ms. Althea Brandt (AB) from EDS: EDS Consultants take note of this concern, and an EMP (statutory document) will be drafted, which will include potential impacts and their corresponding mitigation measures which will be shared with the I & APs for review; The EPL holder will be using this document throughout the operation phase on the EPL.</p>
2.	<p>Mr. Willem van Wyk: Who initiated this project, is it the state?</p>	<p>Ms. AB: We were consulted by the EPL holder, Unique Capital Investment. In order for them to commence with the exploration of the intended minerals, they are required to do an Environmental Impact Assessment in order to get an ECC. We as the consultant have to then engage with the interested & affected parties, as required by the Environmental Act, in order to get their input and hear from them how this might affect you in turn. Once the study is completed and the reporting is also done, then we will provide the interested parties with a copy of the draft ESA report and the EMP for review and further comments.</p>
	<p>Mr. Willem van Wyk: How long has this EPL been active and valid? Why are we only consulted now? If my farm overlies an</p>	<p>Ms. AB: This EPL was issued in 2018 and lapsed in December, 2021. For this reason, a renewal is applied for which will be valid for 2 years as soon as the ECC is issued.</p>

Comment/ issue No.	Commenter name & issue / comment / question	Response and name of responder:
	area of an EPL, do I have no right over that?	You as a farm owner do get to raise your opinions, and a personal contract can be drafted between the EPL holder and the farm owner.
	Mr. Willem van Wyk: I have MCs under my name, what can I do with them?	Ms. AB: This is something that Ministry of Mines and Energy will be able to assist you with.
	Mr. Willem van Wyk: I do not really have any further questions but I have been working on the Klein Aub for 21 years and I know exactly what the responsibilities are with having people working on your farm. It is not easy. Farm areas get vandalized and livestock are stolen. This is why things need to in place this time. We do not want any of this to happen.	Ms. AB: Noted sir, thank you for your input.
3.	Mr. Charles Coetzee: Is Unique Capital Investments an international or local company? With what type of people will we be dealing with?	Mr. Silas David from EDS: The presentative of Unique Capital Investments is a Namibian.

Comment/ issue No.	Commenter name & issue / comment / question	Response and name of responder:
	<p>Mr. Charles Coetzee: If the EPL holder gets the ECC, what method will be used for exploration activities?</p>	<p>Silas David: The methods as explained earlier and as seen in the BID, RC drilling method and Diamond drilling will be used during the exploration phase.</p>
<p>4.</p>	<p>Mr. Manfred Angermund: Do you speak on behalf of the client or will the client also have a meeting with us?</p> <p>We are not against development in the country but we also want transparency from the start. We are farmers and we are very dependent off of our farms and their resources (farming, etc.). explanation on the process highlighted the impacts, but will there be a contract between farmers and the EPL holder before they can just come into our farms and start doing exploration works?</p> <p>Mr. Manfred Angermund: Looks like there is no set-up contract between the EPL holder and the farmer.</p>	<p>Ms. AB: One of the reasons that EDS does public consultations is to get as much details as possible. The findings will be incorporated into the draft ESA report and EMP. These documents will be made available not only to the client but also to all the registered interested & affected parties (I&APs) for reviewing purposes. Comments will also be accepted during this stage as well as during the final reporting stage.</p> <p>Ms. AB: Once the EPL holder is granted an ECC, thereafter an agreement should be reached between the client and the farmer and then a contract should</p>

Comment/ issue No.	Commenter name & issue / comment / question	Response and name of responder:
	<p>We would also want the people from our community to be given job opportunities.</p> <p>When the Ministry of Mines sells these EPLs to individuals or companies, what requirements do they look for? We cannot just accept that all these EPL holders are honest and fair people without knowing their background because we already have an issue of theft. We want to be notified throughout all phases.</p>	<p>be drafted between the two. The Environmental consultant will no longer be part of this phase.</p> <p>It is never a case that exploration works and sampling are done on all areas but certain areas can be selected beforehand using geophysical surveys.</p> <p>We take note of your concerns and input provided.</p>
5.	<p>Mr. Nicholas Mall: Many of farmers are not full-time on the Farm. Will the EPL holder compensate the farmer for appointing someone to look after their area?</p>	<p>Ms. AB: The client will be able to appoint a security guard for the time period that they are conducting exploration works on targeted areas.</p>
6.	<p>Mr. Manfred Angermund: What is the duration of the study and when will the ECC be issued to the client?</p>	<p>Ms. AB: EDS is currently busy with the Public consultation process and after this, the ESA report will then be drafted reports which will be reviewed internally, the client will also review it and give final input then lastly it will be made available for public review and comments which we will use to make final adjustments. The final will be uploaded onto MEFT's portal and the link of the final report will once again be shared with the public for comments which can be made directly</p>

Comment/ issue No.	Commenter name & issue / comment / question	Response and name of responder:
		to MEFT. It is therefore quite difficult to say how long it will be until MEFT gives an answer regarding the ECC.

FINAL REMARKS AND CONCLUSION OF THE MEETING

Ms. Brandt thanked the attendees for their crucial input through comments and raising their concerns. She indicated to the attendees that all their comments, concerns and inputs had been noted down for consideration and addressing in the Environmental Scoping Assessment (ESA) Report as well as incorporating their recommendations into the draft EMP.

Furthermore, Ms. Brandt also informed them that the draft Environmental Assessment Report together with the meeting minutes, and Environmental Management Plan (EMP) will be shared with them for review and further comments. These documents will be made available through emails provided on the attendance register.

Once the review of the draft ESA Report and EMP is done, the documents will be finalized and submitted to the Environmental Commissioner at the Department of Environmental Affairs and Forestry (DEAF) for evaluation and consideration of an ECC.

The meeting was adjourned at 12h15.

On behalf of the registered owner of Erf 235, Easthans Proper, K.M. Parlek intends applying to the Easthans Town Council for

• Rezoning of Erf 235 Easthans Proper from "Business" to "Institutional".

• Consent to start with construction while the rezoning is in progress.

Erf 235 Easthans Proper is located in close proximity to the M121 Main Road leading to Okango. Erf 235 Easthans Proper measures 1 5661 Ha in size and is currently undeveloped. Drivle parking will be provided in accordance with the Easthans Town Planning Scheme.

Take notice that the locality plan of the site for inspection at the Easthans Town Council Offices, during normal office hours.

Further take notice that any person objecting to the proposed use of the land as set out above may lodge such objection together with the grounds thereof, with the Council and with the applicant in writing within 14 days of the last publication of this notice. The last day for objections will be 03rd of February 2016.
