## EXECUTIVE SUMMARY

### Introduction

H.W. Freyer hereinafter referred to as the proponent intends to undertake the following activities:

- **Consolidation of the Remainder of Portion 1 (of the Farm Elephantenberg Noord No.793) and the Remainder of Farm Elephantenberg Noord No.793 into Consolidated Portion “X”;**
- **Subdivision of Consolidated Portion “X” into Portions A to J and the Remainder;**
- **Registration of a 7.5 meter Right of Way Servitude over proposed Portions A-H, in favour of proposed Portions A-G, J and Remainder Consolidated Portion “X”;**
- **Registration of a 15 meter wide Right of Way Servitude over proposed Portions J and Remainder of Consolidated Portion “X” in favour of Portions A-G. Portion J and Remainder of Consolidated Portion “X”.**

The above are listed activities in terms of the Environmental Management Act (No. 7 of 2007) and Environmental Impact Assessment Regulations (Government Notice No. 30 of 2012).

As such the proponent appointed Stubenrauch Planning Consultants (SPC) to undertake an independent Environmental Assessment (EA) in order to obtain an Environmental Clearance Certificate (ECC) for the above activities. The competent authority is the Ministry of Environment, Forestry and Tourism: Department of Environmental Affairs and Forestry (MEFT: DEAF).

### Project Description

It is the intention of the proponent to consolidate the Remainder of Portion 1 (of the Farm Elephantenberg Noord No.793) and the Remainder of Farm Elephantenberg Noord No.793 into Consolidated Portion “X”. The proposed consolidation will enable the subdivision of Consolidated Portion “X” into Portions A to J and the Remainder. The proposed development will ultimately enable our client to sell proposed Portions A to J to prospective buyers.

The Remainder of Portion 1 (of the Farm Elephantenberg Noord No.793) and the Remainder of the Farm Elephantenberg Noord No.793 are currently undeveloped and as such not used for economic gain by the owner, nor agricultural gain by the residents of the surrounding area. The owner thus wishes to consolidate the subject portions and re-subdivide the consolidated portion to create medium sized portions that can ensure the effective use of the unproductive agricultural land.

The proposed subdivision on Consolidated Portion “X” into smaller portions will further allow for the creation of smaller plots that can be effectively used for small to medium scale agricultural and farming activities.

As can be seen on Figure 9, the portions to be created from the subdivision of Consolidated Portion “X” are surrounded by smaller agricultural portions. The proposed development will as such create bigger agricultural portions, enhancing diversity of choice and of the land typology in the area.

## Public Participation

Communication with I&APs about the proposed development was facilitated through the following means and in this order:

- A Background Information Document (BID) containing descriptive information about the proposed activities was compiled and sent out to all identified and registered I&APs via email on 27 January 2022;
- Notices were placed in The Republikein and The Sun newspapers dated 27 January 2022 and 3 February 2022, briefly explaining the activity and its locality, inviting members of the public to register as I&APs (Appendix B); and
- A notice was fixed at the project site (see Appendix A).

Public consultation was carried out according to the Environmental Management Act's EIA Regulations. After the initial notification, I&APs were given two weeks to submit their comments on the project (until **10 February 2022**).

The Draft Scoping Report was circulated from the **25<sup>th</sup> of February 2022 until the 11<sup>th</sup> of March 2022** so that the public could review and comment on it. The comment period will remain open until the final scoping report is submitted to MEFT.

## Conclusions and Recommendations

With reference to **Table 8**, none of the negative construction phase impacts were deemed to have a high significance impact on the environment. The construction impacts were assessed to a **Medium to Low (negative)** significance, without mitigation measures. With the implementation of the recommended mitigation measures in Chapter 7 as well as in the EMP, the significance of the construction phase impacts is likely to be reduced to a **Low (negative)**.

With reference to **Table 8**, none of the negative operational phase impacts were deemed to have a high significance impact on the environment. The construction impacts were assessed to a **Medium to Low (negative)** significance, without mitigation measures. With the implementation of the recommended mitigation measures in Chapter 7 as well as in the EMP, the significance of the construction phase impacts is likely to be reduced to a **Low (negative)**.

It is recommended that this project be authorised because should the development not proceed the subject portion will remain vacant and underutilised. Thus none of the positive or negative impacts from the project will realise.

The “no go” alternative was thus deemed to have a **High (negative)** impact, as all the benefits resulting from the development would not be realised.

The significance of negative impacts can be reduced with effective and appropriate mitigation provided in this report and the EMP. If authorised, the implementation of an EMP should be included as a condition of approval.

# 1 INTRODUCTION

---

## 1.1 PROJECT BACKGROUND

H.W. Freyer hereinafter referred to as the proponent intends to undertake the following activities:

- **Consolidation of the Remainder of Portion 1 (of the Farm Elephantenberg Noord No. 793) and the Remainder of Farm Elephantenberg Noord No. 793 into Consolidated Portion “X”;**
- **Subdivision of Consolidated Portion “X” into Portions A to J and the Remainder;**
- **Registration of a 7.5 meter Right of Way Servitude over proposed Portions A-H, in favour of proposed Portions A-G, J and Remainder Consolidated Portion “X”;**
- **Registration of a 15 meter wide Right of Way Servitude over proposed Portions J and Remainder of Consolidated Portion “X” in favour of Portions A-G. Portion J and Remainder of Consolidated Portion “X”.**

The above are listed activities in terms of the Environmental Management Act (No. 7 of 2007) and Environmental Impact Assessment Regulations (Government Notice No. 30 of 2012).

In terms of the Environmental Management Act (No. 7 of 2007) and Environmental Impact Assessment Regulations (Government Notice No. 30 of 2012), the following listed activities in **Table 1** were triggered by the proposed project:

**Table 1:** List of triggered activities identified in the EIA Regulations which apply to the proposed project

| <b>Activity description and No(s):</b> | <b>Description of relevant activity</b>  | <b>The portion of the development as per the project description that relates to the applicable listed activity</b> |
|--|--|---|
| Activity 10.1 (b)<br>Infrastructure    | The construction of Public roads   | The proposed project includes the creation of roads.  |
| Activity 10.2 (a)<br>Infrastructure    | The route determination of roads and design of associated physical infrastructure where –it is a public road | The proposed project includes the route determination of roads.   |

The above activities will be discussed in more detail in Chapter 4. The proponent appointed Stubenrauch Planning Consultants (SPC) to undertake an independent Environmental Assessment (EA) in order to obtain an Environmental Clearance Certificate (ECC) for the above activities. The

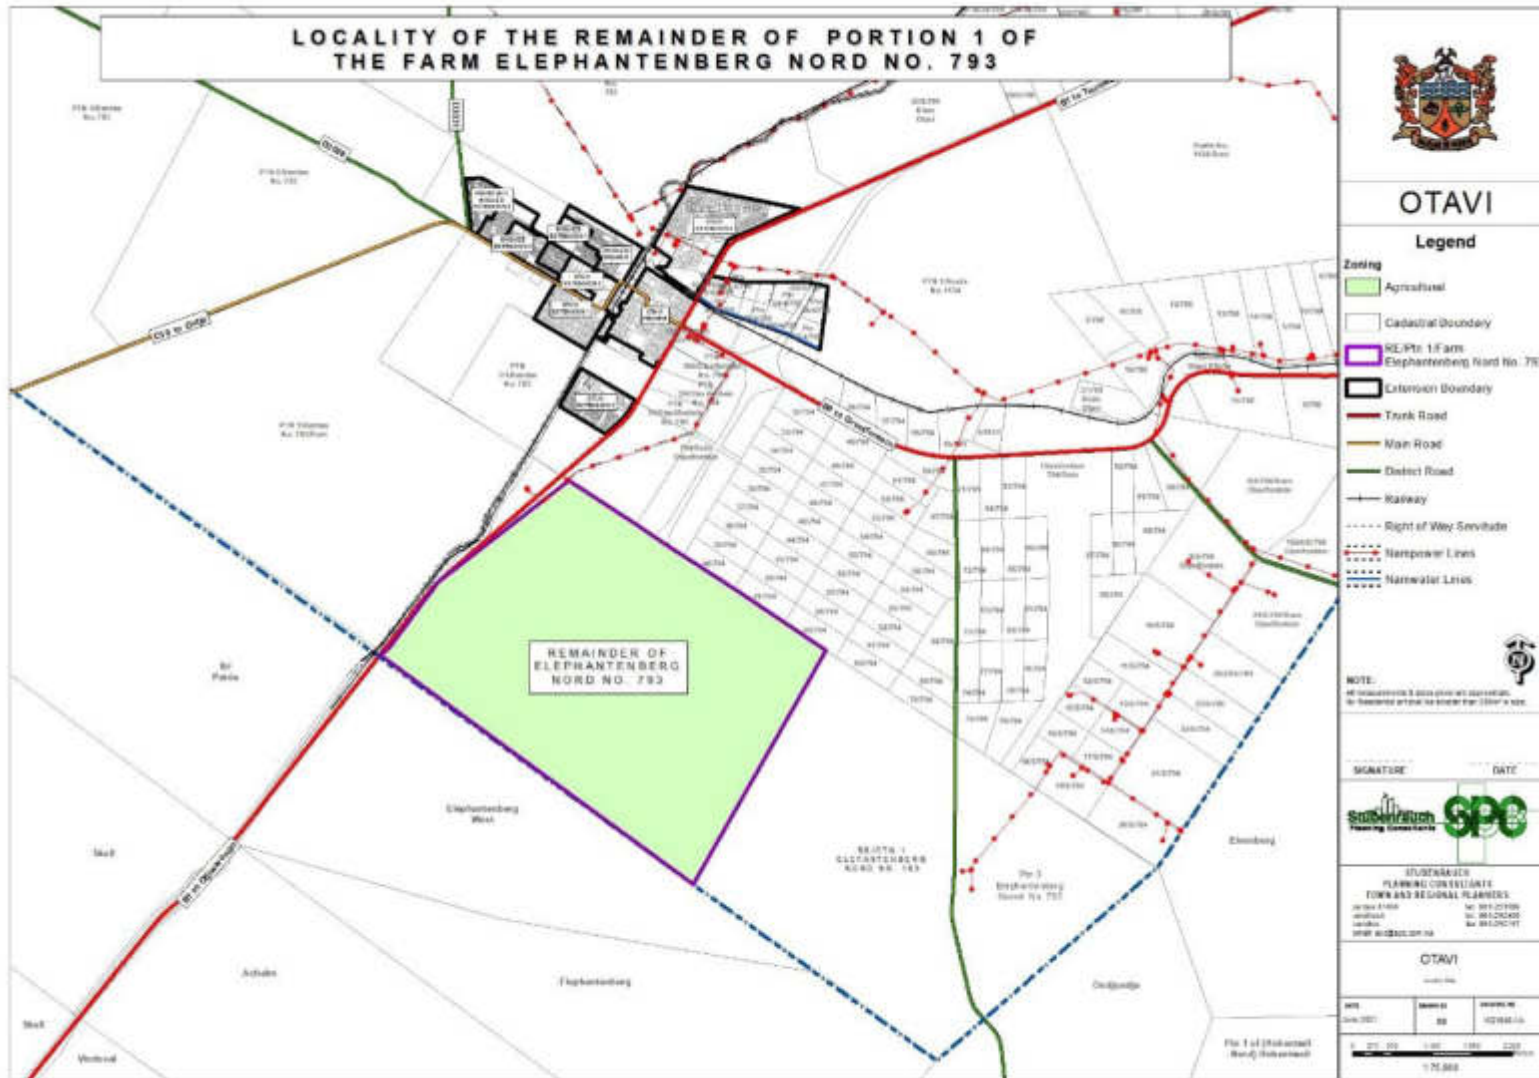

competent authority is the Ministry of Environment, Forestry and Tourism: Department of Environmental Affairs and Forestry (MEFT: DEAF).

The process will be undertaken in terms of the gazetted Namibian Government Notice No. 30 Environmental Impact Assessment Regulations (herein referred to as EIA Regulations) and the Environmental Management Act (No 7 of 2007) (herein referred to as the EMA). The EIA process will investigate if there are any potential significant bio-physical and socio-economic impacts associated with the intended activities. The EIA process would also serve to provide an opportunity for the public and key stakeholders to provide comments and participate in the process.

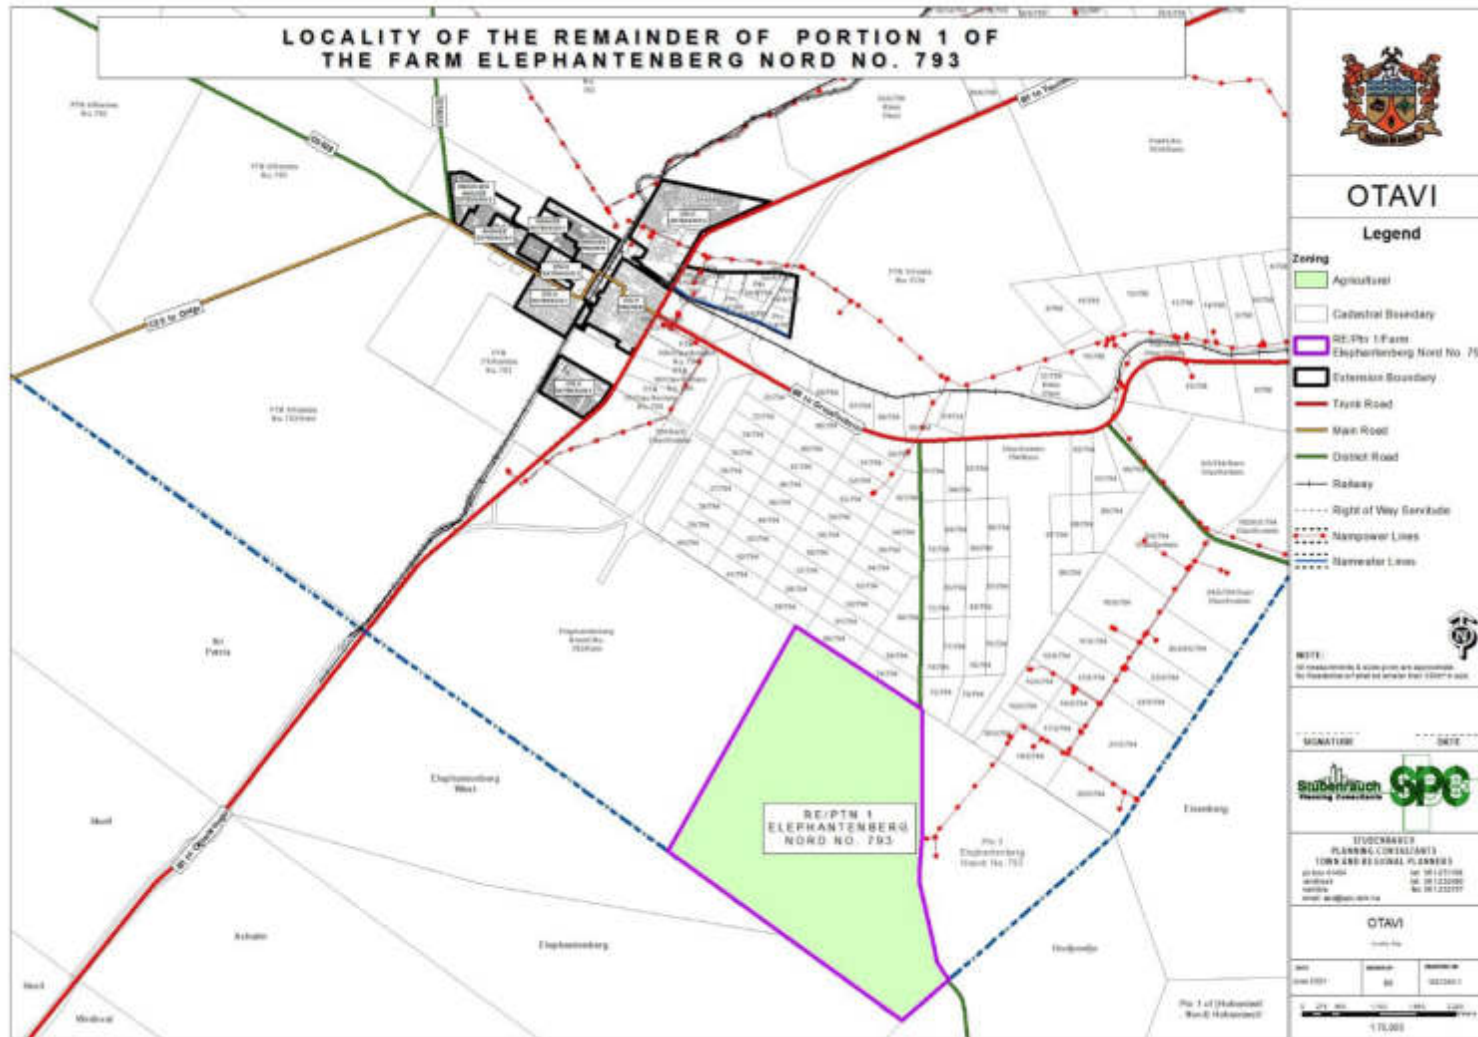

## **1.2 PROJECT LOCATION**

The Remainder of Portion 1 (of the Farm Elephantenberg Noord No. 793) and the Remainder of Farm Elephantenberg Noord No. 793 are situated adjacent to one another, roughly 10 km south of the town of Otavi. The subject portions fall within the Scheme and Local Authority Boundary of the Otavi Town Council, as depicted in **Figure 1 and 2** below. The Remainder of Portion 1 (of the Farm Elephantenberg Noord No. 793) measures 560.1907 Hectares in extent whereas the Remainder of the Farm Elephantenberg Noord No. 793 measures 2502.3574 Hectares in extent.

According to the Otavi Zoning Scheme, the subject portions are zoned for “Agricultural” purposes. These portions are similarly surrounded by portions which are predominantly zoned as “Agricultural” as well.

**Figure 1:** Locality of the Remainder of the Farm Elephantenberg Noord No. 793

**Figure 2:** Locality of the Remainder of Portion 1 of the Farm Elephantenberg Noord No. 793

### 1.3 TERMS OF REFERENCE AND SCOPE OF PROJECT

The scope of this project is limited to conducting an environmental impact assessment and applying for an Environmental Clearance Certificate for the following as indicated in section 1.1 above:

- **Consolidation of the Remainder of Portion 1 (of the Farm Elephantenberg Noord No. 793) and the Remainder of Farm Elephantenberg Noord No. 793 into Consolidated Portion “X”;**
- **Subdivision of Consolidated Portion “X” into Portions A to J and the Remainder;**
- **Registration of a 7.5 meter Right of Way Servitude over proposed Portions A-H, in favour of proposed Portions A-G, J and Remainder Consolidated Portion “X”;**
- **Registration of a 15 meter wide Right of Way Servitude over proposed Portions J and Remainder of Consolidated Portion “X” in favour of Portions A-G. Portion J and Remainder of Consolidated Portion “X”.**

### 1.4 ASSUMPTIONS AND LIMITATIONS

In undertaking this investigation and compiling the Environmental Scoping Report, the following assumptions and limitations apply:

- Assumes the information provided by the proponent is accurate and discloses all information available.
- The limitation that no alternative except for the preferred layout plans and the ‘no-go’ option was considered during this assessment. Various layout alternatives were initially considered by the proponent, also taking terrain and environmental constraints into account, thus the current design plans being the most feasible result. The unique character and appeal of Otavi were however taken into consideration with the design perspective.

### 1.5 CONTENT OF ENVIRONMENTAL ASSESSMENT REPORT

Section 8 of the gazetted EIA Regulations requires specific content to be addressed in a Scoping / Environmental Assessment Report. **Table 2** below is an extract from the EMA and highlights the required contents of a Scoping / Environmental Assessment Report whilst assisting the reader to find the relevant section in the report.

**Table 2:** Contents of the Scoping / Environmental Assessment Report

| Section | Description   | Section of FESR/ Annexure  |
|---------|---|----------------------------|
| 8 (a)   | The curriculum vitae of the EAPs who prepared the report; | Refer to <b>Annexure D</b> |
| 8 (b)   | A description of the proposed activity;                   | Refer to Chapter 4         |

| Section | Description  | Section of FESR/ Annexure   |
|---------|--|---|
| 8 (c)   | A description of the site on which the activity is to be undertaken and the location of the activity on the site;  | Refer to Chapter 3  |
| 8 (d)   | A description of the environment that may be affected by the proposed activity and the manner in which the geographical, physical, biological, social, economic and cultural aspects of the environment may be affected by the proposed listed activity; | Refer to Chapter 3  |
| 8 (e)   | An identification of laws and guidelines that have been considered in the preparation of the scoping report;   | Refer to Chapter 2  |
| 8 (f)   | Details of the public consultation process conducted in terms of regulation 7(1) in connection with the application, including   | Refer to Chapter 5  |
|         | (i) the steps that were taken to notify potentially interested and affected parties of the proposed application  | Refer to Chapter 5  |
|         | (ii) proof that notice boards, advertisements and notices notifying potentially interested and affected parties of the proposed application have been displayed, placed or given;  | Refer to <b>Annexures A and B</b> for site notices and advertisements respectively. |
|         | (iii) a list of all persons, organisations and organs of state that were registered in terms of regulation 22 as interested and affected parties in relation to the application;   | Refer to <b>Annexure C</b>  |
|         | (iv) a summary of the issues raised by interested and affected parties, the date of receipt of and the response of the EAP to those issues;  | Refer to <b>Annexure C</b>  |
| 8 (g)   | A description of the need and desirability of the proposed listed activity and any identified alternatives to the proposed activity that are feasible and reasonable, including the advantages and disadvantages   | Refer to Chapter 4  |

| Section | Description  | Section of FESR/ Annexure                                 |
|---------|--|---|
|         | that the proposed activity or alternatives have on the environment and on the community that may be affected by the activity;  |   |
| 8 (h)   | A description and assessment of the significance of any significant effects, including cumulative effects, that may occur as a result of the undertaking of the activity or identified alternatives or as a result of any construction, erection or decommissioning associated with the undertaking of the proposed listed activity; | Refer to Chapter 7  |
| 8 (i)   | terms of reference for the detailed assessment;  | NB – Assessment of impacts are included in this EA Report |
| 8 (j)   | An environmental management plan   | Refer to <b>Annexure E</b>                                |

## 2 LEGAL FRAMEWORK

### 2.1 LEGISLATION RELEVANT TO THE PROPOSED DEVELOPMENT

There are multiple legal instruments that regulate and have a bearing on good environmental management in Namibia. **Table 3** below provides a summary of the legal instruments considered to be relevant to this development and the environmental assessment process.

**Table 3:** Legislation applicable to the proposed development

| LEGISLATION/POLICIES  | RELEVANT PROVISIONS  | RELEVANCE TO PROJECT   |
|---|--|--|
| The Constitution of the Republic of Namibia as Amended                        | Article 91 (c) provides for duty to guard against “the degradation and destruction of ecosystems and failure to protect the beauty and character of Namibia.”<br><br>Article 95(l) deals with the “maintenance of ecosystems, essential ecological processes and biological diversity” and sustainable use of the country’s natural resources. | Sustainable development should be at the forefront of this development.              |
| Environmental Management Act No. 7 of 2007 (EMA)                              | Section 2 outlines the objective of the Act and the means to achieve that.<br><br>Section 3 details the principle of Environmental Management  | The development should be informed by the EMA.                                       |
| EIA Regulations GN 28, 29, and 30 of EMA (2012)                               | GN 29 Identifies and lists certain activities that cannot be undertaken without an environmental clearance certificate.<br><br>GN 30 provides the regulations governing the environmental assessment (EA) process.   | <b>Activity 10.1 (b) Infrastructure</b><br><b>Activity 10.2 (a) Infrastructure</b>   |
| Convention on Biological Diversity (1992)                                     | Article 1 lists the conservation of biological diversity amongst the objectives of the convention.   | The project should consider the impact it will have on the biodiversity of the area. |
| Draft Procedures and Guidelines for conducting EIAs and compiling EMPs (2008) | Part 1, Stage 8 of the guidelines states that if a proposal is likely to affect people, certain guidelines should be considered by the proponent in the scoping process.   | The EA process should incorporate the aspects outlined in the guidelines.            |

| LEGISLATION/POLICIES   | RELEVANT PROVISIONS   | RELEVANCE TO PROJECT  |
|--|---|---|
| Namibia Vision 2030  | Vision 2030 states that the solitude, silence and natural beauty that many areas in Namibia provide are becoming sought after commodities and must be regarded as valuable natural assets.  | Care should be taken that the development does not lead to the degradation of the natural beauty of the area.   |
| Water Act No. 54 of 1956   | Section 23(1) deals with the prohibition of pollution of underground and surface water bodies.  | The pollution of water resources should be avoided during construction and operation of the development.  |
| The Ministry of Environment and Tourism (MET) Policy on HIV & AIDS | MET has recently developed a policy on HIV and AIDS. In addition, it has also initiated a programme aimed at mainstreaming HIV and gender issues into environmental impact assessments.   | The proponent and its contractor have to adhere to the guidelines provided to manage the aspects of HIV/AIDS. Experience with construction projects has shown that a significant risk is created when migrant construction workers interact with local communities. |
| Urban and Regional Planning Act No 5 of 2018                       | To consolidate the laws relating to urban and regional planning; to provide for a legal framework for spatial planning in Namibia; to provide for principles and standards of spatial planning; to establish the urban and regional planning board; to decentralise certain matters relating to spatial planning; to provide for the preparation, approval and review of the national spatial development framework, regional structure plans and urban structure plans; to provide for the preparation, approval, review and amendment of zoning schemes; to provide for the establishment of townships; to provide for the alteration of boundaries of approved townships, to provide for the disestablishment of approved townships; to provide for the change of name of approved townships; to provide for the subdivision and consolidation of land; to provide for the alteration, | The proposed development must adhere to the provisions regarding the subdivision and rezoning of land.  |

| LEGISLATION/POLICIES                        | RELEVANT PROVISIONS  | RELEVANCE TO PROJECT  |
|---|--|---|
|   | suspension and deletion of conditions relating to land; and to provide for incidental matters.   |   |
| Local Authorities Act No. 23 of 1992        | The Local Authorities Act prescribes the manner in which a town or municipality should be managed by the Town or Municipal Council.  | The development must comply with provisions of the Local Authorities Act.   |
| Labour Act no. 11 of 2007                   | Chapter 2 details the fundamental rights and protections.<br>Chapter 3 deals with the basic conditions of employment.  | Given the employment opportunities presented by the development, compliance with the labour law is essential.   |
| National Heritage Act No. 27 of 2004        | The Act is aimed at protecting, conserving and registering places and objects of heritage significance.  | All protected heritage resources (e.g. human remains etc.) discovered, need to be reported immediately to the National Heritage Council (NHC) and require a permit from the NHC before they may be relocated. |
| Roads Ordinance 17 of 1972                  | <ul style="list-style-type: none"> <li>• Section 3.1 deals with width of proclaimed roads and road reserve boundaries</li> <li>• Section 27.1 is concerned with the control of traffic on urban trunk and main roads</li> <li>• Section 36.1 regulates rails, tracks, bridges, wires, cables, subways or culverts across or under proclaimed roads</li> <li>• Section 37.1 deals with Infringements and obstructions on and interference with proclaimed roads.</li> </ul> | Adhere to all applicable provisions of the Roads Ordinance.   |
| Public and Environmental Health Act of 2015 | This Act (GG 5740) provides a framework for a structured uniform public and environmental health system in Namibia. It covers notification, prevention and control of diseases and sexually transmitted  | Contractors and users of the proposed development are to comply with these legal requirements.  |

| LEGISLATION/POLICIES   | RELEVANT PROVISIONS  | RELEVANCE TO PROJECT  |
|--|--|---|
|  | infections; maternal, ante-natal and neo-natal care; water and food supplies; infant nutrition; waste management; health nuisances; public and environmental health planning and reporting. It repeals the Public Health Act 36 of 1919 (SA GG 979).   |   |
| Nature Conservation Ordinance no. 4 of 1975                          | Chapter 6 provides for legislation regarding the protection of indigenous plants   | Indigenous and protected plants must be managed within the legal confines.  |
| Water Quality Guidelines for Drinking Water and Wastewater Treatment | Details specific quantities in terms of water quality determinants, which wastewater should be treated to before being discharged into the environment   | These guidelines are to be applied when dealing with water and waste treatment.   |
| Environmental Assessment Policy of Namibia (1995)                    | The Policy seeks to ensure that the environmental consequences of development projects and policies are considered, understood and incorporated into the planning process, and that the term ENVIRONMENT is broadly interpreted to include biophysical, social, economic, cultural, historical and political components. | This EIA considers this term of Environment.  |
| Water Resources Management Act No. 11 of 2013                        | Part 12 deals with the control and protection of groundwater<br><br>Part 13 deals with water pollution control   | The pollution of water resources should be avoided during construction and operation of the development. Should water need to be abstracted, a water abstraction permit will be required from the Ministry of Water, Agriculture and Land Reform. |
| Forest Act 12 of 2001 and Forest Regulations of 2015                 | To provide for the establishment of a Forestry Council and the appointment of certain officials; to consolidate the laws relating to the   | Protected tree and plant species as per the Forest Act No 12 of 2001 and Forest Regulations of 2015 may   |

| LEGISLATION/POLICIES                                     | RELEVANT PROVISIONS  | RELEVANCE TO PROJECT  |
|--|--|---|
|  | management and use of forests and forest produce; to provide for the protection of the environment and the control and management of forest fires; to repeal the Preservation of Bees and Honey Proclamation, 1923 (Proclamation No. 1 of 1923), Preservation of Trees and Forests Ordinance, 1952 (Ordinance No. 37 of 1952) and the Forest Act, 1968 (Act No. 72 of 1968); and to deal with incidental matters.  | not be removed without a permit from the Department of Forestry.  |
| Atmospheric Pollution Prevention Ordinance No 45 of 1965 | Part II - control of noxious or offensive gases,<br>Part III - atmospheric pollution by smoke,<br>Part IV - dust control, and<br>Part V - air pollution by fumes emitted by vehicles.  | The development should consider the provisions outlined in the act. The proponent should apply for an Air Emissions permit from the Ministry of Health and Social Services (if needed). |
| Hazardous Substance Ordinance 14 of 1974                 | To provide for the control of substances which may cause injury or ill-health to or death of human beings by reason of their toxic, corrosive, irritant, strongly sensitizing or flammable nature or the generation of pressure thereby in certain circumstances; to provide for the division of such substances into groups in relation to the degree of danger; to provide for the prohibition and control of the importation, manufacture, sale, use, operation, application, modification, disposal or dumping of such substances; and to provide for matters connected therewith. | The handling, usage and storage of hazardous substances on site should be carefully controlled according to this Ordinance.   |

| LEGISLATION/POLICIES                | RELEVANT PROVISIONS   | RELEVANCE TO PROJECT   |
|-------------------------------------|---|--|
| Soil Conservation Act No 76 of 1969 | Act to consolidate and amend the law relating to the combating and prevention of soil erosion, the conservation, improvement and manner of use of the soil and vegetation and the protection of the water sources | The proposed activity should ensure that soil erosion and soil pollution is avoided during construction and operation. |

This EIA process will be undertaken in accordance with the EIA Regulations. A Flow Diagram (refer to **Figure 2** below) provides an outline of the EIA process to be followed.

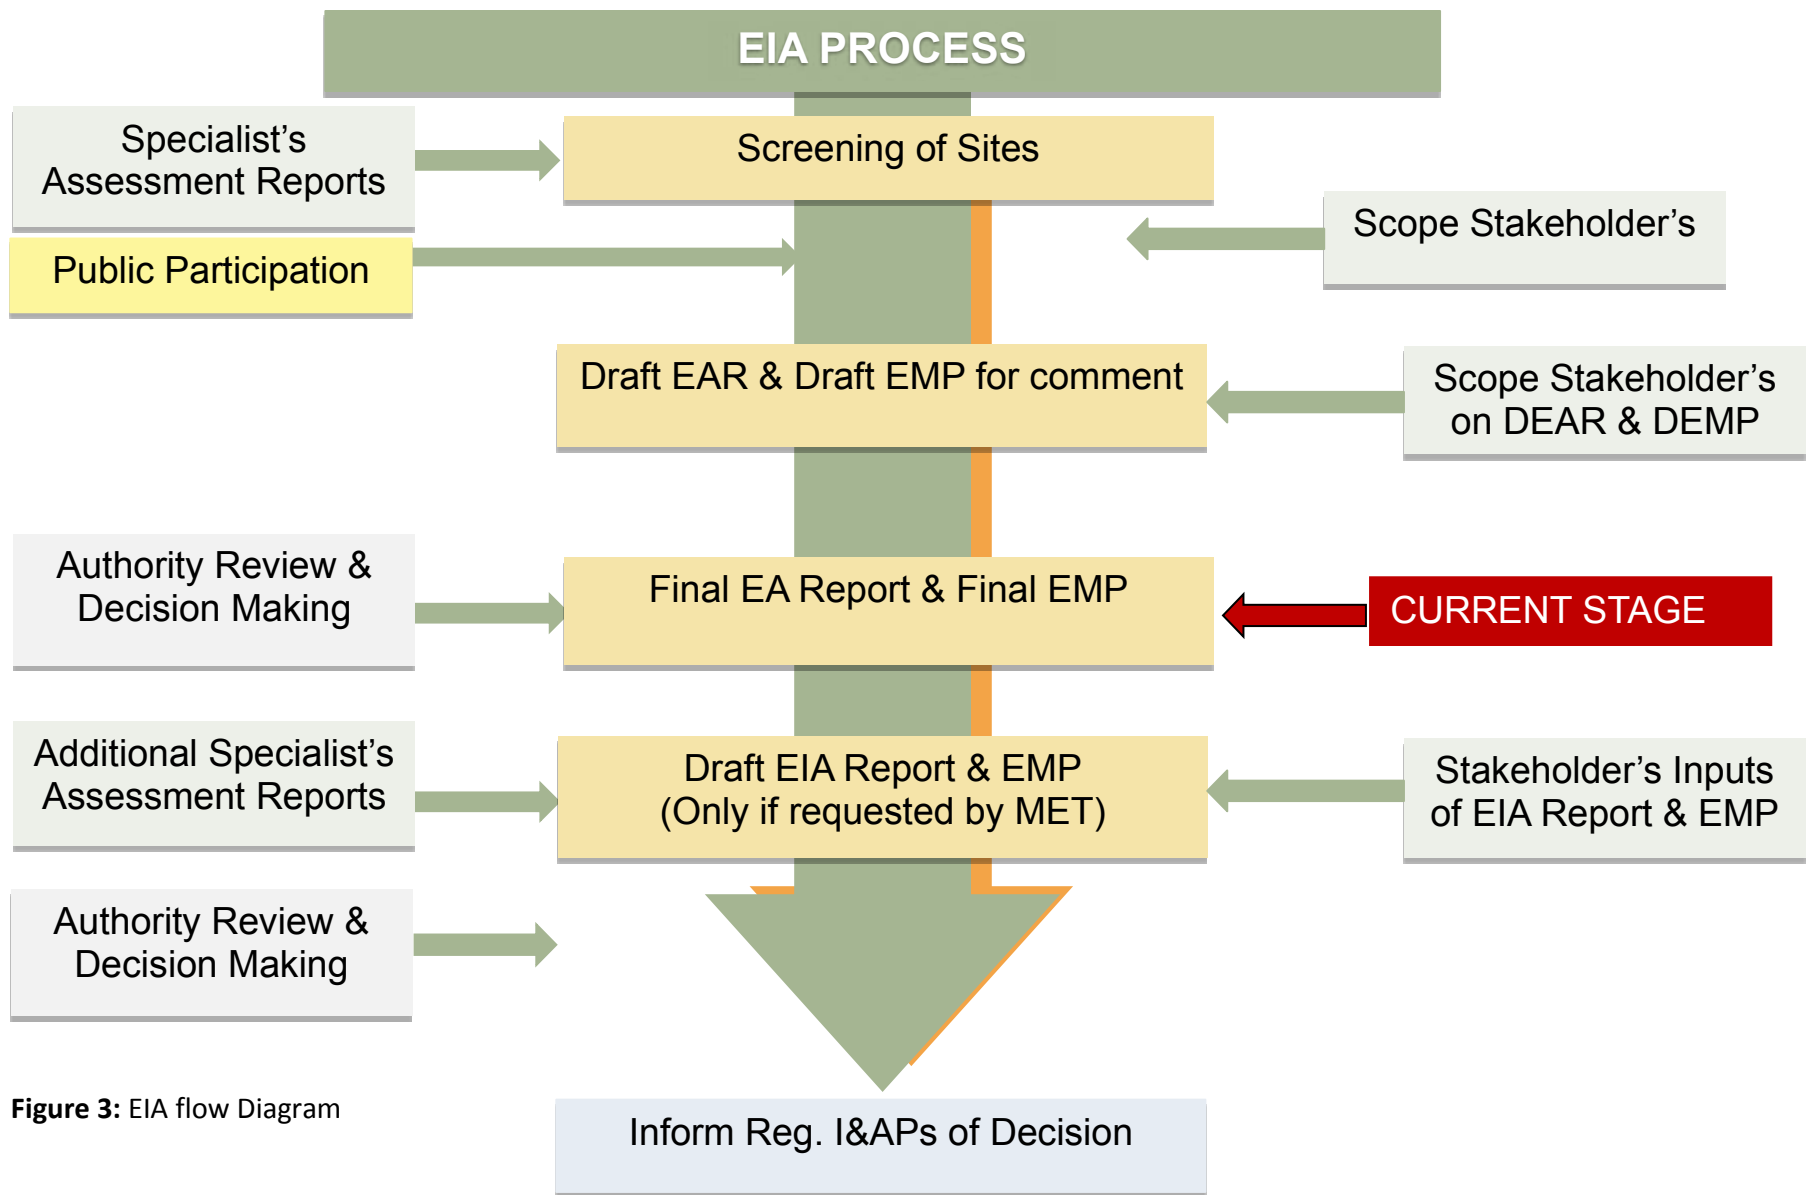

Figure 3: EIA flow Diagram

### 3 ENVIRONMENTAL BASELINE DESCRIPTION

#### 3.1 SOCIAL ENVIRONMENT

##### 3.1.1 Socio-Economic Context

The statistics shown in **Table 4** below are derived from the 2011 Namibia Population and Housing Census (Namibia Statistics Agency, 2011), and presented from a local and regional perspective.

**Table 4:** Statistics of the Otavi Constituency and Otjozondjupa Region (Namibia Statistics Agency, 2014)

| <b>OTAVI CONSTITUENCY</b>                                     |                         |
|---|-------------------------|
| <b>ATTRIBUTE</b>  | <b>INDICATOR</b>        |
| Population  | 12 488                  |
| Females   | 5 754                   |
| Males   | 6 734                   |
| Population under 5 years                                      | 13%                     |
| Population aged 5 to 14 years                                 | 21%                     |
| Population aged 15 to 59 years                                | 60%                     |
| Population aged 60 years and above                            | 6%                      |
| Female: male ratio  | 100:117                 |
| Literacy rate of 15 years old and above                       | 73%                     |
| People above 15 years who have never attended school          | 28%                     |
| People above 15 years who are currently attending school      | 18%                     |
| People above 15 years who have left school                    | 49%                     |
| People aged 15 years and above who belong to the labour force | 75%                     |
| Population employed   | 69%                     |
| Homemakers  | 15%                     |
| Students  | 38%                     |
| Retired or old age income recipients                          | 47%                     |
| Income from pension   | 7%                      |
| Income from business and non-farming activities               | 6%                      |
| Income from farming   | 7%                      |
| Income from cash remittance                                   | 3%                      |
| Wages and salaries  | 72%                     |
| Main Language   | Herero Languages- 27.1% |
| <b>OTJOZONDJUPA REGION</b>                                    |                         |
| <b>ATTRIBUTE</b>  | <b>INDICATOR</b>        |
| Population  | 143 903                 |
| Population aged 60 years and above                            | 6%                      |
| Population aged 5 to 14 years                                 | 22%                     |
| Population aged 15 to 59 years                                | 58%                     |

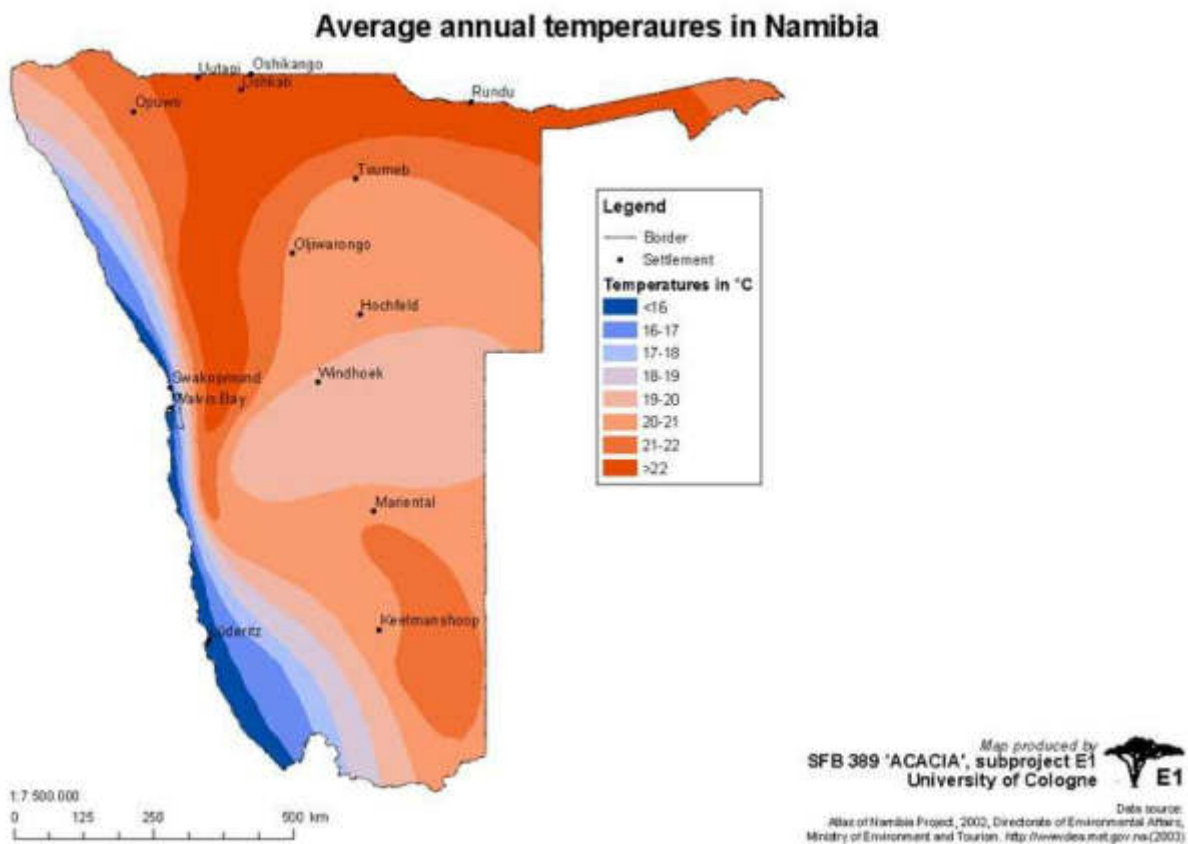

### 3.1.2 Archaeological and Heritage Context

No archaeological and heritage sites are known to be located within the proposed development area.

## 3.2 BIO-PHYSICAL ENVIRONMENT

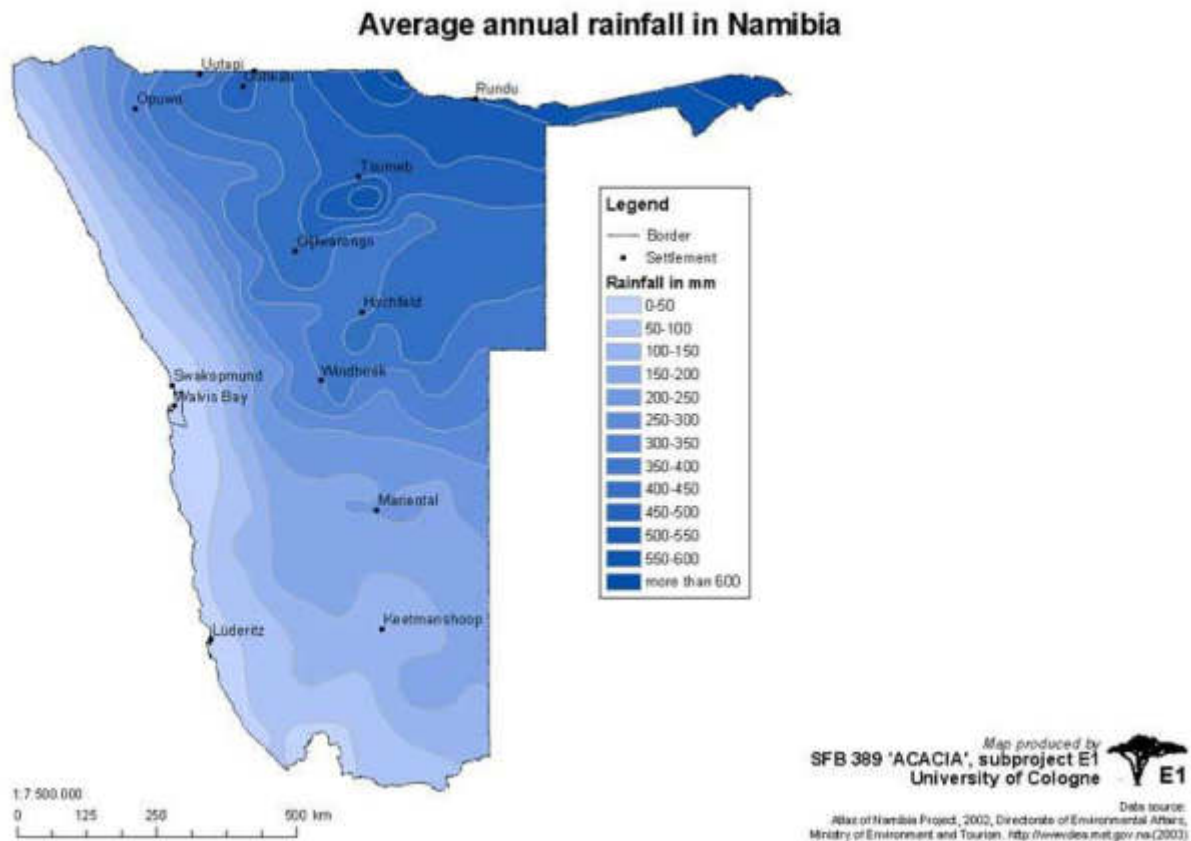

### 3.2.1 Climate

The climate of the subject area can be described as semi-arid. Average annual temperatures are usually between 19°C and 20°C, with average maximum temperatures between 32°C and 34°C and average minimum temperatures between 4°C and 6°C (Mendelsohn, Jarvis, Roberts, *et al.*, 2002).

**Figure 4:** Annual average temperature ([http://www.uni-koeln.de/sfb389/e/e1/download/atlas\\_namibia/e1\\_download\\_climate\\_e.htm#temperature\\_annual](http://www.uni-koeln.de/sfb389/e/e1/download/atlas_namibia/e1_download_climate_e.htm#temperature_annual))

The subject area generally experiences more rainfall than the south and west of the country with an average rainfall of 400 to 450 mm as indicated in **Figure 4** below.

**Figure 5:** Average annual Rainfall ([http://www.uni-koeln.de/sfb389/e/e1/download/atlas\\_namibia/pics/climate/rainfall-annual.jpg](http://www.uni-koeln.de/sfb389/e/e1/download/atlas_namibia/pics/climate/rainfall-annual.jpg))

### 3.2.2 Topography, Geology and Soils

The geology of Otavi belongs to the Damara Supergroup and Gariep Complex depicted in light brown in **Figure 5** below, with the dominant soils being schists (Mendelsohn et al., 2002).

This hydrogeological region hosts eight major water supply schemes of which Outjo (107), Kombat, Grootfontein (105) and Tsumeb (108) are independent waterworks, while the Otavi (79), Brandwag (16), Karstland (45) and Berg Aukas/Otjituuo (12) schemes and the stand-by abstraction scheme from Berg Aukas Mine are managed by NamWater (Ministry of Agriculture Water and Rural Development, 2011). Otavi is dependent on five wells and the inflow of an eight of the total spring discharge of Otavifontein (Ministry of Agriculture Water and Rural Development, 2011).

### **3.3 TERRESTRIAL ECOLOGY**

#### **3.3.1 Flora and Fauna**

Otavi falls within the broader Tree-and-Shrub Savanna biome and forms part of the Acacia Tree-and-Shrub Savanna sub-biome. The Acacia Tree-and-Shrub Savanna sub-biome is characterized by large, open expanses of grasslands dotted with Acacia trees (Mendelsohn *et al.*, 2002). The trees within this biome are tallest in the east where they grow in deeper sands and become more shrub-like to the west where they grow in shallower soils. The vegetation type of Otavi is classified as Karstveld with the dominant soils being Mollic Leptosols. The structures in the area is dominated by mixed woodlands (Mendelsohn *et al.*, 2002).

The removal of protected tree and plant species is not permitted without a permit from the Department of Forestry prior to removal. Trees protected under the Forestry Act 12 of 2001 should be protected within the layout of the proposed development.

## 4 PROJECT DESCRIPTION

---

### 4.1 PROJECT COMPONENTS

As previously outlined in Section 1.1, the proposed project involves the following activities:

- **Consolidation of the Remainder of Portion 1 (of the Farm Elephantenberg Noord No. 793) and the Remainder of Farm Elephantenberg Noord No. 793 into Consolidated Portion “X”;**
- **Subdivision of Consolidated Portion “X” into Portions A to J and the Remainder;**
- **Registration of a 7.5 meter Right of Way Servitude over proposed Portions A-H, in favour of proposed Portions A-G, J and Remainder Consolidated Portion “X”;**
- **Registration of a 15 meter wide Right of Way Servitude over proposed Portions J and Remainder of Consolidated Portion “X” in favour of Portions A-G. Portion J and Remainder of Consolidated Portion “X”.**

These components will be described in further detail below, in terms of their design, layout and footprint.

### 4.2 ALTERNATIVES

As pointed out in Section 1.4 above various layout alternatives were initially considered by the proponent, ultimately resulting in the final layouts. As such only the no-go alternative will be discussed.

#### 4.2.1 No – Go Alternative

The no-go alternative is the baseline against which all alternatives are assessed. The no-go alternative would essentially entail maintaining the current situation, whereby the subject portion will remain un/under-utilised.

### 4.3 THE PROPOSED DEVELOPMENT

It is the intention of the proponent to consolidate the Remainder of Portion 1 (of the Farm Elephantenberg Noord No. 793) and the Remainder of Farm Elephantenberg Noord No. 793 into Consolidated Portion “X”. The proposed consolidation will enable the subdivision of Consolidated Portion “X” into Portions A to J and the Remainder. The proposed development will ultimately enable our client to sell proposed Portions A to J to prospective buyers.

The Remainder of Portion 1 (of the Farm Elephantenberg Noord No. 793) and the Remainder of the Farm Elephantenberg Noord No. 793 are currently undeveloped and as such not used for economic gain by the owner, nor agricultural gain by the residents of the surrounding area. The owner thus wishes to consolidate the subject portions and re-subdivide the consolidated portion to create medium sized portions that can ensure the effective use of the unproductive agricultural land.

The proposed subdivision on Consolidated Portion “X” into smaller portions will further allow for the creation of smaller plots that can be effectively used for small to medium scale agricultural and farming activities.

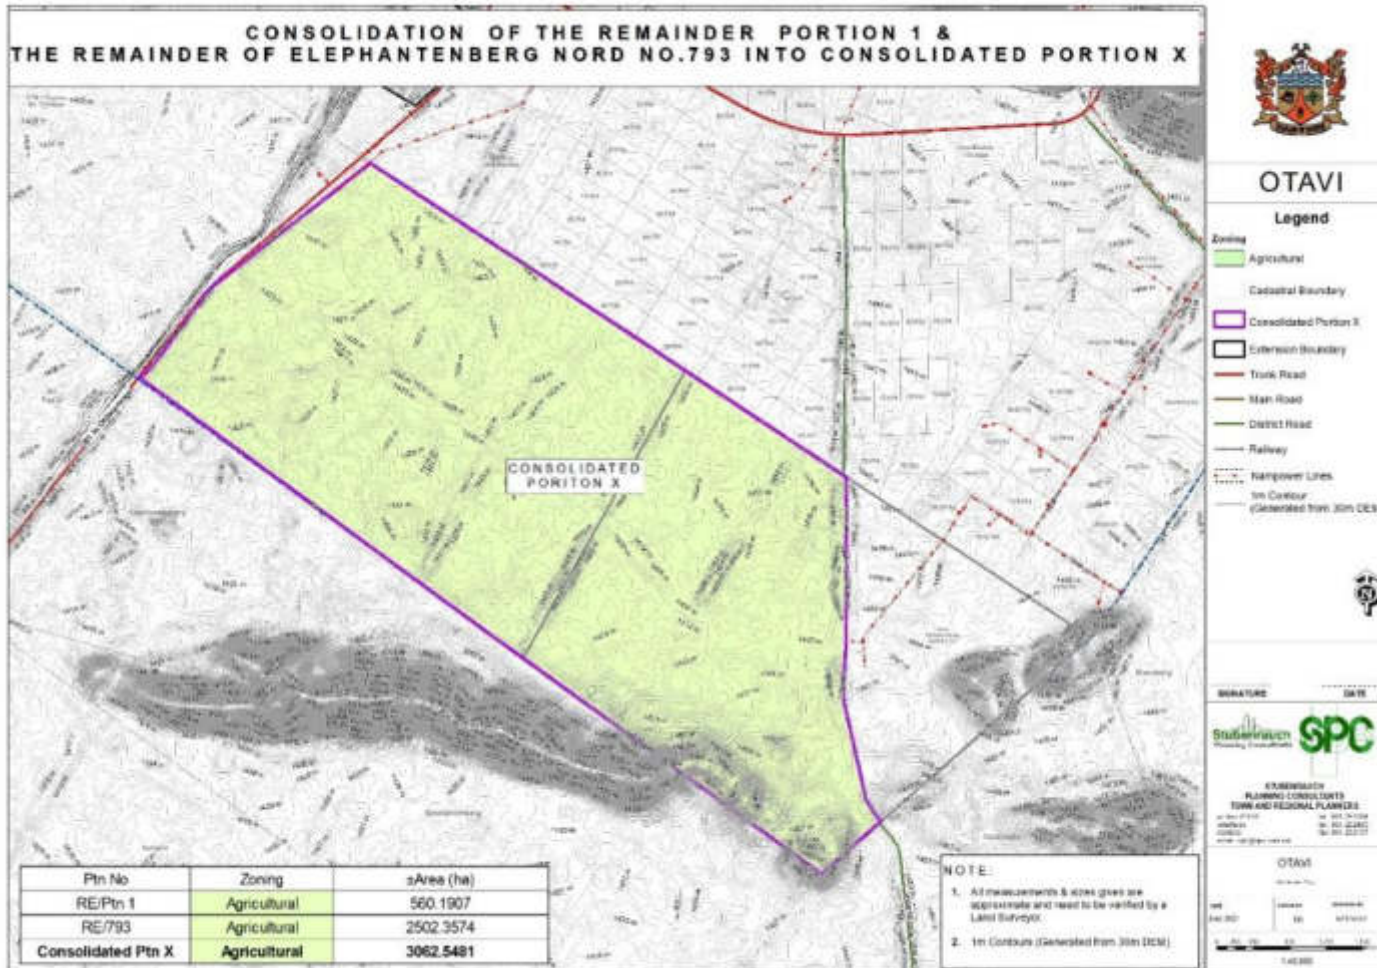

As can be seen on **Figure 9**, the portions to be created from the subdivision of consolidated portion “X” are surrounded by smaller agricultural portions. The proposed development will as such create bigger agricultural portions, enhancing diversity of choice and of the land typology in the area.

#### 4.3.1 The Proposed Consolidation

The proponent intends to consolidate the Remainder of Portion 1 (of the Farm Elephantenberg Noord No. 793) and the Remainder of Farm Elephantenberg Noord No. 793 into consolidated Portion X as depicted on **Table 4** and **Figure 8** below.

**Table 4:** Consolidation of the Remainder of Portion 1 (of the Farm Elephantenberg Noord No. 793) and the Remainder of Farm Elephantenberg Noord No. 793 into Consolidated Portion X

| PORTION NO                      | ZONING              | ± AREA (HA)       |
|---------------------------------|---------------------|-------------------|
| RE/Ptn 1                        | Agricultural        | 560.1907          |
| RE/793                          | Agricultural        | 250.3574          |
| <b>Consolidated Portion “X”</b> | <b>Agricultural</b> | <b>3062.54.81</b> |

**Figure 8:** Consolidation of the Remainder of Portion 1 (of the Farm Elephantenberg Noord No. 793) and the Remainder of Farm Elephantenberg Noord No. 793 into Consolidated Portion X

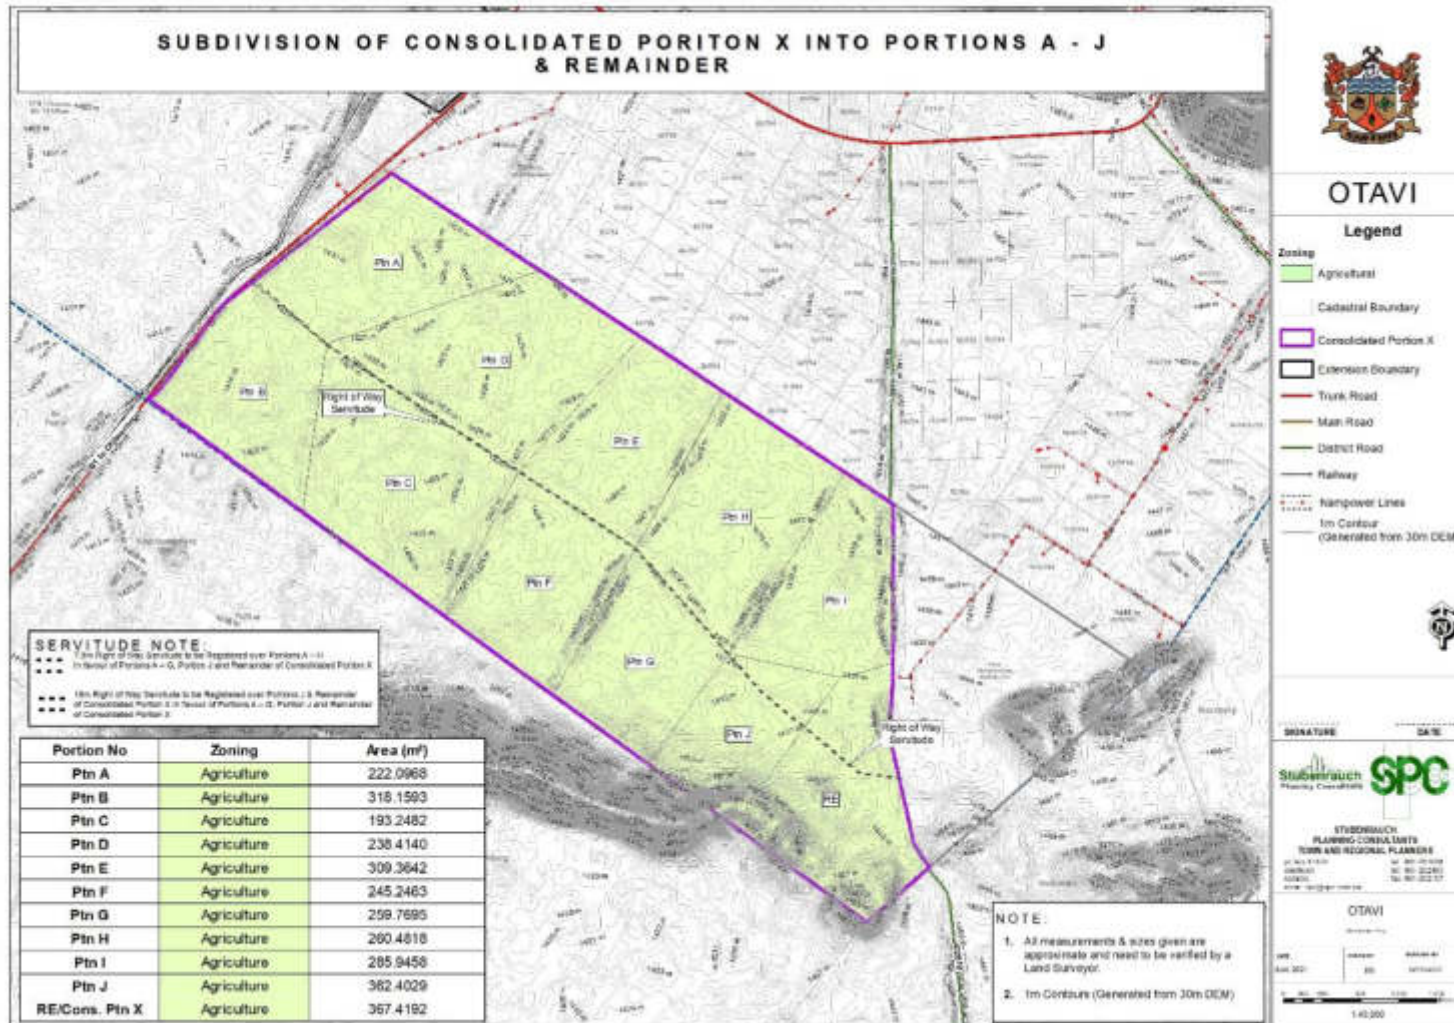

#### 4.3.2 The Proposed Subdivisions

The proponent intends to subdivide “Consolidated Portion X” into Portion A to J and the Remainder as depicted on **Table 5** and **Figure 9** below.

**Table 5:** Subdivision of proposed Consolidated Portion “X” into Portion A to J and the Remainder

| <b>PORTION NO</b>       | <b>ZONING</b>       | <b>± AREA (HA)</b> |
|-------------------------|---------------------|--------------------|
| <b>Ptn A</b>            | <b>Agricultural</b> | <b>222.0968</b>    |
| <b>Ptn B</b>            | <b>Agricultural</b> | <b>318.1593</b>    |
| <b>Ptn C</b>            | <b>Agricultural</b> | <b>193.2482</b>    |
| <b>Ptn D</b>            | <b>Agricultural</b> | <b>238.4140</b>    |
| <b>Ptn E</b>            | <b>Agricultural</b> | <b>309.3642</b>    |
| <b>Ptn F</b>            | <b>Agricultural</b> | <b>245.2463</b>    |
| <b>Ptn G</b>            | <b>Agricultural</b> | <b>259.7695</b>    |
| <b>Ptn H</b>            | <b>Agricultural</b> | <b>260.4818</b>    |
| <b>Ptn I</b>            | <b>Agricultural</b> | <b>285.9458</b>    |
| <b>Ptn J</b>            | <b>Agricultural</b> | <b>362.4029</b>    |
| <b>RE/Cons. Ptn “X”</b> | <b>Agricultural</b> | <b>36.4192</b>     |

**Figure 9:** Subdivision of proposed Consolidated Portion “X” into Portion A-J and the Remainder

### 4.3.3 Engineering Services and Access Provision

#### 4.3.3.1 Electricity

The newly created portions will be connected to the NamPower grid, as well as make use of solar power for electricity.

#### 4.3.3.2 Sewer

Given the distance of the proposed newly created portion to the existing municipal connection for sewer, it will be expensive to connect the plot to the municipal sewer system. The new owner has the option of installing a wastewater treatment plant. This is usually in the form of a 3-chamber system that can be installed underground.

#### 4.3.3.3 Water

The newly created portions will make use of boreholes for water provision. The potential buyers will need to investigate the availability of water for the portions.

#### 4.3.3.4 Access

The proposed Remainder of Consolidated Portion "X" will obtain access from the existing approved access point from the Road D2810. A 15 meter wide road connecting to this approved access point currently exists. This road runs in a linear direction across proposed Consolidated Portion "X". It is the intension of the proponent to register the following along this existing road:

- Registration of a 15 meter wide Right of Way Servitude over proposed Portions J and Remainder of Consolidated Portion "X" in favour of Portions A-G. Portion J and Remainder of Consolidated Portion "X".
- Registration of a 7.5 meter Right of Way Servitude over proposed Portions A-H, in favour of proposed Portions A-G, J and Remainder Consolidated Portion "X";

## 5 PUBLIC PARTICIPATION PROCESS

---

### 5.1 PUBLIC PARTICIPATION REQUIREMENTS

In terms of Section 21 of the EIA Regulations a call for open consultation with all I&APs at defined stages of the EIA process is required. This entails participatory consultation with members of the public by providing an opportunity to comment on the proposed project. Public Participation has thus incorporated the requirements of Namibia's legislation, but also takes account of international guidelines, including Southern African Development Community (SADC) guidelines and the Namibian EIA Regulations. Public participation in this project has been undertaken to meet the specific requirements in accordance with the international best practice. Please see **Table 6** below for the activities undertaken as part of the public participation process. The I&APs were given time to comment from **27 January 2022 to 17 February 2022**.

**Table 6:** Table of Public Participation Activities

| ACTIVITY  | REMARKS               |
|---|-----------------------|
| Placement of site notices/posters in Otavi  | See <b>Annexure A</b> |
| Placing advertisements in two newspapers namely the Sun and the Republikein (27 January 2022 and 3 February 2022) | See <b>Annexure B</b> |
| Written notice to surrounding property owners and Interested and Affected Parties via Email (27 January 2022)     | See <b>Annexure C</b> |

#### 5.1.1 Environmental Assessment Phase 2

The second phase of the PPP involved the lodging of the Draft Environmental Scoping Report (DESR) to all registered I&APs for comment. Registered and potential I&APs were informed of the availability of the DESR for public comment *via* a letter/email dated **25 February 2022**. An Executive Summary of the DESR was also included in the letters to the registered I&APs. I&APs had until **11 March 2022** to submit comments or raise any issues or concerns they may have with regard to the proposed project.

## 6 ASSESSMENT METHODOLOGY

*The purpose of this chapter is to describe the assessment methodology utilized in determining the significance of the construction and operational impacts of the proposed project, and where applicable the possible alternatives, on the biophysical and socio-economic environment.*

Assessment of predicted significance of impacts for a proposed development is by its nature, inherently uncertain – environmental assessment is thus an imprecise science. To deal with such uncertainty in a comparable manner, a standardised and internationally recognised methodology has been developed. Such accepted methodology is applied in this study to assess the significance of the potential environmental impacts of the proposed development, outlined as follows in **Table 7**.

**Table 7:** Impact Assessment Criteria

| CRITERIA  | CATEGORY   |
|---|--|
| <b>Impact</b>   | Description of the expected impact   |
| <b>Nature</b><br>Describe type of effect                              | <b>Positive:</b> The activity will have a social / economical / environmental benefit.<br><b>Neutral:</b> The activity will have no effect<br><b>Negative:</b> The activity will have a social / economical / environmental harmful effect   |
| <b>Extent</b><br>Describe the scale of the impact                     | <b>Site Specific:</b> Expanding only as far as the activity itself (onsite)<br><b>Small:</b> restricted to the site's immediate environment within 1 km of the site (limited)<br><b>Medium:</b> Within 5 km of the site (local)<br><b>Large:</b> Beyond 5 km of the site (regional)  |
| <b>Duration</b><br>Predicts the lifetime of the impact.               | <b>Temporary:</b> < 1 year (not including construction)<br><b>Short-term:</b> 1 – 5 years<br><b>Medium term:</b> 5 – 15 years<br><b>Long-term:</b> >15 years (Impact will stop after the operational or running life of the activity, either due to natural course or by human interference)<br><b>Permanent:</b> Impact will be where mitigation or moderation by natural course or by human interference will not occur in a particular means or in a particular time period that the impact can be considered temporary |
| <b>Intensity</b><br>Describe the magnitude (scale/size) of the Impact | <b>Zero:</b> Social and/or natural functions and/ or processes remain unaltered<br><b>Very low:</b> Affects the environment in such a way that natural and/or social functions/processes are not affected  |

| CRITERIA  | CATEGORY   |
|---|--|
|   | <p><b>Low:</b> Natural and/or social functions/processes are slightly altered</p> <p><b>Medium:</b> Natural and/or social functions/processes are notably altered in a modified way</p> <p><b>High:</b> Natural and/or social functions/processes are severely altered and may temporarily or permanently cease</p>  |
| <p><b>Probability of occurrence</b><br/>Describe the probability of the Impact <u>actually</u> occurring</p>  | <p><b>Improbable:</b> Not at all likely</p> <p><b>Probable:</b> Distinctive possibility</p> <p><b>Highly probable:</b> Most likely to happen</p> <p><b>Definite:</b> Impact will occur regardless of any prevention measures</p>   |
| <p><b>Degree of Confidence in predictions</b><br/>State the degree of confidence in predictions based on availability of information and specialist knowledge</p> | <p><b>Unsure/Low:</b> Little confidence regarding information available (&lt;40%)</p> <p><b>Probable/Med:</b> Moderate confidence regarding information available (40-80%)</p> <p><b>Definite/High:</b> Great confidence regarding information available (&gt;80%)</p>   |
| <p><b>Significance Rating</b><br/>The impact on each component is determined by a combination of the above criteria.</p>  | <p><b>Neutral:</b> A potential concern which was found to have no impact when evaluated</p> <p><b>Very low:</b> Impacts will be site specific and temporary with no mitigation necessary.</p> <p><b>Low:</b> The impacts will have a minor influence on the proposed development and/or environment. These impacts require some thought to adjustment of the project design where achievable, or alternative mitigation measures</p> <p><b>Medium:</b> Impacts will be experienced in the local and surrounding areas for the life span of the development and may result in long term changes. The impact can be lessened or improved by an amendment in the project design or implementation of effective mitigation measures.</p> <p><b>High:</b> Impacts have a high magnitude and will be experienced regionally for at least the life span of the development, or will be irreversible. The impacts could have the no-go proposition on portions of the development in spite of any mitigation measures that could be implemented.</p> |

\*NOTE: Where applicable, the magnitude of the impact has to be related to the relevant standard (threshold value specified, and source referenced). The magnitude of impact is based on specialist knowledge of that particular field.

For each impact, the EXTENT (spatial scale), MAGNITUDE (size or degree scale) and DURATION (time scale) are described. These criteria are used to ascertain the SIGNIFICANCE of the impact, firstly in the case of no mitigation and then with the most effective mitigation measure(s) in place. The decision as to which combination of alternatives and mitigation measures to apply lies with the proponent, and their acceptance and approval ultimately with the relevant environmental authority.

The SIGNIFICANCE of an impact is derived by taking into account the temporal and spatial scales and magnitude. Such significance is also informed by the context of the impact, i.e. the character and identity of the receptor of the impact.

### 6.1 MITIGATION MEASURES

There is a mitigation hierarchy of actions which can be undertaken to respond to any proposed project or activity (See **Figure 10** below). These cover avoidance, minimization, restoration and compensation. It is possible and considered sought after to enhance the environment by ensuring that positive gains are included in the proposed activity or project. If negative impacts occur then the hierarchy indicates the following steps.

**Impact avoidance:** This step is most effective when applied at an early stage of project planning. It can be achieved by:

- not undertaking certain projects or elements that could result in adverse impacts;
- avoiding areas that are environmentally sensitive; and
- putting in place preventative measures to stop adverse impacts from occurring.

**Impact minimization:** This step is usually taken during impact identification and prediction to limit or reduce the degree, extent, magnitude, or duration of adverse impacts. It can be achieved by:

- scaling down or relocating the proposal;
- redesigning elements of the project; and
- taking supplementary measures to manage the impacts.

**Figure 10:** Mitigation Hierarchy

**Restoration:** This step is taken to improve degraded or removed ecosystems following exposure to impacts that cannot be completely avoided or minimised. Restoration tries to return an area to the

original ecosystem that occurred before impacts. Restoration is frequently needed towards the end of a project's life-cycle but may be possible in some areas during operation.

**Impact compensation:** This step is usually applied to remedy unavoidable residual adverse impacts. It can be achieved by:

- rehabilitation of the affected site or environment, for example, by habitat enhancement;
- restoration of the affected site or environment to its previous state or better; and
- replacement of the same resource values at another location (off-set), for example, by wetland engineering to provide an equivalent area to that lost to drainage or infill.

## **7 ASSESSMENT OF POTENTIAL IMPACTS AND POSSIBLE MITIGATION MEASURES**

---

### ***7.1 INTRODUCTION***

This Chapter describes the potential impacts on the biophysical and socio-economic environments, which may occur due to the proposed activities described in Chapter 4. These include potential impacts, which may arise during the operation of the proposed development (i.e. long-term impacts) as well as the potential construction related impacts (i.e. short to medium term). The assessment of potential impacts will help to inform and confirm the selection of the preferred layouts to be submitted to MEFT: DEAF for consideration. In turn, MEFT: DEAF's decision on the environmental acceptability of the proposed project and the setting of conditions of authorisation (should the project be authorised) will be informed by this chapter, amongst other information, contained in this EA Report.

The baseline and potential impacts that could result from the proposed development are described and assessed with potential mitigation measures recommended. Finally, comment is provided on the potential cumulative impacts which could result should this development, and others like it in the area, be approved.

### ***7.2 CONSTRUCTION PHASE IMPACTS ON THE BIOPHYSICAL ENVIRONMENT***

The construction phase impacts are those impacts on the biophysical and socio-economic environment that would occur during the construction phase. These impacts are inherently temporary in duration but may have longer lasting effects.

#### **7.2.1 Flora and Fauna Impacts (Biodiversity)**

Trees protected under the Forestry Act 12 of 2001 should be protected within the development. The trees located on the subject site should be accommodated in the layout and proposed use for the portion. No protected tree species may be removed without a valid permit from the local Department of Forestry.

It is anticipated that the proposed development area and associated infrastructure (e.g. water, sewage, access route, etc.) would have localised negative implications on the environment and associated fauna and flora should the proposed mitigation measures as outlined in the EMP be enforced.

### **7.2.2 Surface and Ground Water Impacts**

Surface and groundwater impacts may be encountered during the construction and operation phase, especially if development takes place within the rainy season. The risk of contaminating such water sources can be increased by accidental spillage of oils and fuels and any other equipment used during construction. This risk is minimised by the fact that the construction phase will be a short-term activity.

### **7.2.3 Soil Erosion Impacts**

Given the characteristics of the proposed site, soil erosion is likely to be encountered especially if construction will take place during the rainy season, the removal of vegetation will render the soil vulnerable to erosion as they also serve the purpose of keeping the soils compacted.

## ***7.3 CONSTRUCTION PHASE IMPACTS ON THE SOCIO-ECONOMIC ENVIRONMENT***

### **7.3.1 Heritage impacts**

No archaeological and heritage resources are expected to be found on the site. The project management should however be made aware of the provisions of the National Heritage Act regarding the prompt reporting of archaeological finds. Section 3.1.2 provides an overview of the archaeological and heritage context of the town and region.

### **7.3.2 Health, Safety and Security Impacts**

Due to the demand for construction workers during the construction of the proposed project an influx of migrant workforce who will require temporary accommodation in Otavi might be experienced. Experience with other construction projects in a developing-world context has shown that, where migrant construction workers have the opportunity to interact with the local community, a significant risk is created for the development of social conditions and sexual behaviors that contribute to the spread of HIV and AIDS.

In response to the threat the pandemic poses, MEFT has developed a policy on HIV and AIDS. This policy, which was developed with support from USAID, GTZ and the German Development Fund, provides for a non-discriminatory work environment and for workplace programs managed by a Ministry-wide committee. The MEFT has also initiated a programme aimed at mainstreaming HIV and gender issues into environmental impact assessments.

### **7.3.3 Traffic Impacts**

Traffic is expected to increase slightly during the construction phase of the project in areas where construction will take place. A number of trucks and other heavy machinery will be required to deliver, handle and position construction materials as well as to remove spoil material. Not only will the increase in traffic result in associated noise impacts, it will also impact on the roads in the area.

### **7.3.4 Noise Impacts**

Construction may result in associated noise impacts. These noise impacts will mainly be associated with construction machinery and construction vehicles. The impact is however limited mainly to the construction period only.

### **7.3.5 Dust and Emission Impacts**

Excavation and stockpiles during the construction phase could result in dust impacts, if not managed correctly. Dust could impact negatively on the health of the nearby community if mitigation measures are not implemented. Dust impacts are primarily associated with the construction phase.

### **7.3.6 Municipal Services**

The construction phase will result in additional people on-site, who will require provision of the following services:

- Potable water for domestic (ablution and drinking) and construction purposes.
- Temporary toilets during the construction phase.
- Solid waste management (domestic and construction waste).

These services if not managed well are likely to create an opportunity for water wastage; litter; solid and human waste pollution.

### **7.3.7 Storage and Utilisation of Hazardous Substances**

Hazardous substances are regarded by the Hazardous Substance Ordinance (No. 14 of 1974) as those substances which may cause injury or ill-health to or death of human beings by reason of their toxic, corrosive, irritant, strongly sensitizing or flammable nature or the generation of pressure thereby in certain circumstances. During the construction period, the use and storage of these types of hazardous substances, such as shutter oil, curing compounds, types of solvents, primers and adhesives and diesel, on-site could have negative impacts on the surrounding environment if these substances spill and enter the environment.

## **7.4 OPERATIONAL PHASE IMPACTS**

The operational phase impacts are those impacts on the biophysical and socio-economic environment that would occur during the operational phase of the proposed project and are inherently long-term in duration.

### **7.4.1 Visual Impacts**

There may be a change in visual characteristics of the site particularly as the areas are currently undeveloped. The intended activities for the proposed site may alter the sense of place for the existing community and property owners situated in close proximity to the site. The extent of this disturbance will depend on how highly the interested and affected parties valued the initial aesthetic quality of the site. However, it is not expected that the visual impact will be significant as the land uses intended for the proposed sites are in line with the surrounding land uses of the area.

### **7.4.2 Noise Impacts**

The operational activities may result in associated noise impacts, depending on the exact type of activities taking place on the properties. However due to the nature of the land uses proposed for the subject even it is not expected that the noise levels will be significant if managed well.

### **7.4.3 Emission Impacts**

The air quality in the area is considered to be fairly good. Additional emissions are not expected due to the land uses that are intended for the site.

### **7.4.4 Social Impacts**

Otavi is located on land that is characterised by good rainfall, as well as soil texture and topography which is favorable for various agricultural activities. As such, the area is suitable for the proposed creation of smaller commercial agricultural plots to be used for small to medium agriculture enterprises. This will encourage the densification of agricultural opportunities and increase food security through intense farming. The creation of additional plots further brings about employment creation for the locals who will be employed there.

### **7.5 CUMULATIVE IMPACTS**

The cumulative impact of the proposed developments in regard to the degradation of the project area is very difficult to rate. If all proposed mitigation measures are however in place to minimise the overall impacts, then the cumulative impact can be expected to be rated as **Medium-Low (negative)** for the proposed developments.

### **7.6 ENVIRONMENTAL MANAGEMENT PLAN**

An Environmental Management Plan (EMP) is contained in **Annexure E** of this report. The purpose of the EMP is to outline the type and range of mitigation measures that should be implemented during the construction and decommissioning phases of the project to ensure that negative impacts associated with the development are avoided or mitigated.

### **7.7 SUMMARY OF POTENTIAL IMPACTS**

A summary of all the potential impacts from the proposed project assessed above is included in **Table 8**. The **Tables 9 – 10** provide a summary of the mitigation measures proposed for the impacts. While some difference in magnitude of the potential impacts would result from the proposed alternatives this difference was not considered to be significant for any of the potential impacts. As such, the table below applies to all proposed alternatives.

**Table 8:** Summary of the significance of the potential impacts

| Description of potential impact          | Project alternative | No mitigation / mitigation | Extent | Magnitude  | Duration   | Significance | Probability | Confidence | Reversibility | Cumulative impact  |
|--|---------------------|----------------------------|--------|------------|------------|--------------|-------------|------------|---------------|--------------------|
| <b>CONSTRUCTION PHASE</b>                |                     |                            |        |            |            |              |             |            |               |                    |
| <b>1. Biodiversity (Fauna and Flora)</b> | Elephantenberg      | No mitigation              | Local  | Medium-Low | Short term | Medium       | Probable    | Certain    | Reversible    | Medium (-ve)       |
|  |                     | Mitigation                 | Local  | Low        | Short term | Low          | Probable    | Certain    | Reversible    | Low (-ve)          |
|  | No go               | No mitigation              | Local  | Neutral    | Short term | Neutral      | Probable    | Certain    | Reversible    | Neutral            |
|  |                     | Mitigation                 | Local  | Neutral    | Short term | Neutral      | Probable    | Certain    | Reversible    | Neutral            |
| <b>2. Surface &amp; ground water</b>     | Elephantenberg      | No mitigation              | Local  | Medium     | Short term | Medium       | Probable    | Certain    | Reversible    | Medium (-ve)       |
|  |                     | Mitigation                 | Local  | Low        | Short term | Medium - low | Probable    | Certain    | Reversible    | Medium - Low (-ve) |
|  | No go               | No mitigation              | Local  | Neutral    | Short term | Neutral      | Probable    | Certain    | Reversible    | Neutral            |
|  |                     | Mitigation                 | Local  | Neutral    | Short term | Neutral      | Probable    | Certain    | Reversible    | Neutral            |
| <b>3. Soil erosion</b>                   | Elephantenberg      | No mitigation              | Local  | Medium     | Short term | Medium - low | Probable    | Certain    | Reversible    | Medium - low (-ve) |
|  |                     | Mitigation                 | Local  | Low        | Short term | Low          | Probable    | Certain    | Reversible    | Low (-ve)          |
|  | No go               | No mitigation              | Local  | Neutral    | Short term | Neutral      | Probable    | Certain    | Reversible    | Neutral            |
|  |                     | Mitigation                 | Local  | Neutral    | Short term | Neutral      | Probable    | Certain    | Reversible    | Neutral            |
| <b>4. Heritage</b>                       | Elephantenberg      | No mitigation              | Local  | Very low   | Short term | Very low     | Probable    | Certain    | Irreversible  | Very low(-ve)      |
|  |                     | Mitigation                 | Local  | Negligible | Short term | Negligible   | Probable    | Certain    | Irreversible  | Negligible (-ve)   |
|  | No go               | No mitigation              | Local  | Neutral    | Short term | Neutral      | Probable    | Certain    | Reversible    | Neutral            |
|  |                     | Mitigation                 | Local  | Neutral    | Short term | Neutral      | Probable    | Certain    | Reversible    | Neutral            |

| Description of potential impact       | Project alternative | No mitigation / mitigation | Extent | Magnitude  | Duration   | Significance | Probability | Confidence | Reversibility | Cumulative impact  |
|---------------------------------------|---------------------|----------------------------|--------|------------|------------|--------------|-------------|------------|---------------|--------------------|
|                                       |                     | Mitigation                 | Local  | Neutral    | Short term | Neutral      | Probable    | Certain    | Reversible    | Neutral            |
| <b>5. Health, safety and security</b> | Elephantenberg      | No mitigation              | Local  | Medium-Low | Short term | Medium-Low   | Probable    | Certain    | Reversible    | Medium-Low (-ve)   |
|                                       |                     | Mitigation                 | Local  | Low        | Short term | Low          | Probable    | Certain    | Reversible    | Low (-ve)          |
|                                       | No go               | No mitigation              | Local  | Neutral    | Short term | Neutral      | Probable    | Certain    | Reversible    | Neutral            |
|                                       |                     | Mitigation                 | Local  | Neutral    | Short term | Neutral      | Probable    | Certain    | Reversible    | Neutral            |
| <b>6. Traffic impacts</b>             | Elephantenberg      | No mitigation              | Local  | Low        | Short term | Low          | Probable    | Certain    | Reversible    | Low (-ve)          |
|                                       |                     | Mitigation                 | Local  | Very low   | Short term | Very low     | Probable    | Certain    | Reversible    | Very low           |
|                                       | No go               | No mitigation              | Local  | Neutral    | Short term | Neutral      | Probable    | Certain    | Reversible    | Neutral            |
|                                       |                     | Mitigation                 | Local  | Neutral    | Short term | Neutral      | Probable    | Certain    | Reversible    | Neutral            |
| <b>7. Noise impacts</b>               | Elephantenberg      | No mitigation              | Local  | Medium     | Short term | Medium - low | Probable    | Certain    | Reversible    | Medium - Low (-ve) |
|                                       |                     | Mitigation                 | Local  | Low        | Short term | Low          | Probable    | Certain    | Reversible    | Very low (-ve)     |
|                                       | No go               | No mitigation              | Local  | Neutral    | Short term | Neutral      | Probable    | Certain    | Reversible    | Neutral            |
|                                       |                     | Mitigation                 | Local  | Neutral    | Short term | Neutral      | Probable    | Certain    | Reversible    | Neutral            |
| <b>8. Emissions impacts</b>           | Elephantenberg      | No mitigation              | Local  | Medium     | Short term | Low          | Probable    | Certain    | Reversible    | Medium - Low (-ve) |
|                                       |                     | Mitigation                 | Local  | Low        | Short term | Very Low     | Probable    | Certain    | Reversible    | Low (-ve)          |
|                                       | No go               | No mitigation              | Local  | Neutral    | Short term | Neutral      | Probable    | Certain    | Reversible    | Neutral            |
|                                       |                     | Mitigation                 | Local  | Neutral    | Short term | Neutral      | Probable    | Certain    | Reversible    | Neutral            |
| <b>9. Municipal services</b>          | Elephantenberg      | No mitigation              | Local  | Low        | Short term | Low          | Probable    | Certain    | Reversible    | Low (-ve)          |

| Description of potential impact      | Project alternative | No mitigation / mitigation | Extent | Magnitude  | Duration    | Significance | Probability | Confidence | Reversibility | Cumulative impact |
|--------------------------------------|---------------------|----------------------------|--------|------------|-------------|--------------|-------------|------------|---------------|-------------------|
|                                      | No go               | Mitigation                 | Local  | Very low   | Short term  | Very low     | Probable    | Certain    | Reversible    | Very low (-ve)    |
|                                      |                     | No mitigation              | Local  | Neutral    | Short term  | Neutral      | Probable    | Certain    | Reversible    | Neutral           |
|                                      |                     | Mitigation                 | Local  | Neutral    | Short term  | Neutral      | Probable    | Certain    | Reversible    | Neutral           |
| <b>10. Waste</b>                     | Elephantenberg      | No mitigation              | Local  | Low        | Short term  | Medium       | Probable    | Certain    | Reversible    | Low (-ve)         |
|                                      |                     | Mitigation                 | Local  | Very low   | Short term  | Low          | Probable    | Certain    | Reversible    | Very low (-ve)    |

**Table 9:** Proposed mitigation measures for the construction phase

| CONSTRUCTION PHASE IMPACTS |  |
|----------------------------|--|
| Impact                     | Mitigation Measures  |
| <b>Flora and Fauna</b>     | <ul style="list-style-type: none"> <li>Adapt the proposed developments to the local environment – e.g. small adjustments to the site layout could avoid potential features such as water bodies and vegetation.</li> <li>Prevent the destruction of protected and endemic plant species.</li> <li>Prevent contractors from collecting wood, veld food, etc. during the construction phase.</li> <li>The plants that are to be kept should be clearly marked with “danger tape” to prevent accidental removal.</li> <li>Regular inspection of the marking tool should be carried out.</li> <li>The very important plants should be “camped off” to prevent the unintended removal or damage to these trees.</li> <li>Recommend the planting of local indigenous species of flora as part of the landscaping as these species would require less maintenance than exotic species.</li> <li>Transplant removed plants where possible, or plant new plants in lieu of those that have been removed.</li> </ul> |

| CONSTRUCTION PHASE IMPACTS              |  |
|---|--|
| Impact                                  | Mitigation Measures  |
|   | <ul style="list-style-type: none"> <li>Prevent the introduction of potentially invasive alien ornamental plant species such as; <i>Lantana</i>, <i>Opuntia</i>, <i>Prosopis</i>, <i>Tecoma</i>, etc.; as part of the landscaping as these species could infest the area further over time.</li> </ul>  |
| <b>Surface and Ground Water Impacts</b> | <ul style="list-style-type: none"> <li>It is recommended that construction takes place outside of the rainy season in order to limit flooding on site and surface water pollution.</li> <li>No dumping of waste products of any kind in or in close proximity to surface water bodies.</li> <li>Heavy construction vehicles should be kept out of any surface water bodies and the movement of construction vehicles should be limited where possible to the existing roads and tracks.</li> <li>Ensure that oil/ fuel spillages from construction vehicles and machinery are minimised and that where these occur, that they are appropriately dealt with.</li> <li>Drip trays must be placed underneath construction vehicles when not in use to contain all oil that might be leaking from these vehicles.</li> <li>Contaminated runoff from the construction sites should be prevented from entering the surface and ground water bodies.</li> <li>All materials on the construction site should be properly stored.</li> <li>Disposal of waste from the sites should be properly managed and taken to the designated landfill site.</li> <li>Construction workers should be given ablution facilities at the construction sites that are located at least <b>30 m</b> away from any surface water and regularly serviced.</li> <li>Washing of personnel or any equipment should not be allowed on site. Should it be necessary to wash construction equipment these should be done at an area properly suited and prepared to receive and contain polluted waters.</li> </ul> |
| <b>Soil Erosion</b>                     | <ul style="list-style-type: none"> <li>It is recommended that construction takes place outside of the rainy season in order to limit potential flooding and the runoff of loose soil causing further erosion.</li> <li>Appropriate erosion control structures must be put in place where soil may be prone to erosion.</li> </ul>  |

| <b>CONSTRUCTION PHASE IMPACTS</b>  |   |
|------------------------------------|---|
| <b>Impact</b>                      | <b>Mitigation Measures</b>  |
|                                    | <ul style="list-style-type: none"> <li>• Checks must be carried out at regular intervals to identify areas where erosion is occurring.</li> <li>• Appropriate remedial actions are to be undertaken wherever erosion is evident.</li> </ul>   |
| <b>Heritage</b>                    | <ul style="list-style-type: none"> <li>• The project management should be made aware of the provisions of the National Heritage Act regarding the prompt reporting of archaeological finds.</li> <li>• In the event of such finds, construction must stop, and the project management or contractors should notify the National Heritage Council of Namibia immediately.</li> </ul>   |
| <b>Health, Safety and Security</b> | <ul style="list-style-type: none"> <li>• Construction personnel should not overnight at the site, except the security personnel.</li> <li>• Ensure that all construction personnel are properly trained depending on the nature of their work.</li> <li>• Provide for a first aid kit and a properly trained person to apply first aid when necessary.</li> <li>• A wellness program should be initiated to raise awareness on health issues, especially the impact of sexually transmitted diseases as described above.</li> <li>• Provide free condoms in the workplace and to local community throughout the construction period and promote their usage.</li> <li>• Facilitate access to Antiretroviral (ARV) medication.</li> <li>• Encourage HIV counselling and testing.</li> <li>• Encourage Voluntary Medical Male Circumcision (VMMC).</li> <li>• Provide awareness on the prevention of mother to child HIV Transmission.</li> <li>• Restrict unauthorised access to the site and implement access control measures.</li> <li>• Clearly demarcate the construction site boundaries along with signage of “no unauthorised access”.</li> <li>• Clearly demarcate dangerous areas and no-go areas on site.</li> <li>• Ensure that all construction personnel are wearing protective face mask and practicing social distancing.</li> <li>• Provide hand washing facilities and hand sanitizers.</li> </ul> |

| <b>CONSTRUCTION PHASE IMPACTS</b> |  |
|-----------------------------------|--|
| <b>Impact</b>                     | <b>Mitigation Measures</b>   |
|                                   | <ul style="list-style-type: none"> <li>• Staff and visitors to the site must be fully aware of all health and safety measures and emergency procedures.</li> <li>• The contractor must comply with all applicable occupational health and safety requirements.</li> <li>• The workforce should be provided with all necessary Personal Protective Equipment where appropriate.</li> </ul>  |
| <b>Traffic</b>                    | <ul style="list-style-type: none"> <li>• Limit and control the number of access points to the site.</li> <li>• Ensure that road junctions have good sightlines.</li> <li>• Construction vehicles' need to be in a road worthy condition and maintained throughout the construction phase.</li> <li>• Transport the materials in the least number of trips as possible.</li> <li>• Adhere to the speed limit.</li> <li>• Implement traffic control measures where necessary.</li> </ul>   |
| <b>Noise</b>                      | <ul style="list-style-type: none"> <li>• No amplified music should be allowed on site.</li> <li>• Inform immediate neighbours of construction activities to commence and provide for continuous communication between the neighbours and contractor.</li> <li>• Limit construction times to acceptable daylight hours.</li> <li>• Install technology such as silencers on construction machinery.</li> <li>• Do not allow the use of horns as a general communication tool but use it only where necessary as a safety measure.</li> </ul> |
| <b>Dust and Emission</b>          | <ul style="list-style-type: none"> <li>• It is recommended that dust suppressants such as Dustex be applied to all the construction clearing activities to ensure at least 50% control efficiency on all the unpaved roads and reduce water usage.</li> <li>• Construction vehicles to only use designated roads.</li> <li>• During high wind conditions the contractor must make the decision to cease works until the wind has calmed down.</li> </ul>   |

| <b>CONSTRUCTION PHASE IMPACTS</b> |   |
|-----------------------------------|---|
| <b>Impact</b>                     | <b>Mitigation Measures</b>  |
|                                   | <ul style="list-style-type: none"> <li>• Cover any stockpiles with plastic to minimise windblown dust.</li> <li>• Provide workers with dust masks, when dust levels are high.</li> </ul>  |
| <b>Waste</b>                      | <ul style="list-style-type: none"> <li>• It is recommended that waste from the temporary toilets be disposed of at an approved Wastewater Treatment Works.</li> <li>• A sufficient number of waste bins should be placed around the site for the soft refuse.</li> <li>• A sufficient number of skip containers for the heavy waste and rubble should be provided for around the site.</li> <li>• Solid waste will be collected and disposed of at an appropriate local land fill or an alternative approved site, in consultation with the local authority.</li> </ul> |
| <b>Hazardous Substances</b>       | <ul style="list-style-type: none"> <li>• Storage of the hazardous substances in a bunded area, with a volume of 120 % of the largest single storage container or 25 % of the total storage containers whichever is greater.</li> <li>• Refuel vehicles in designated areas that have a protective surface covering and utilise drip trays for stationary plant.</li> </ul>  |

**Table 10:** Proposed mitigation measures for the operational phase

| <b>OPERATIONAL PHASE IMPACTS</b> |  |
|----------------------------------|--|
| <b>Impact</b>                    | <b>Mitigation Measures</b>   |
| <b>Surface and Ground Water</b>  | <ul style="list-style-type: none"> <li>• A no-go buffer area of at least 15 m should be allocated to any water bodies in the area.</li> <li>• No dumping of waste products of any kind in or in close proximity to any surface water bodies.</li> <li>• Contaminated runoff from the various operational activities should be prevented from entering any surface or ground water bodies.</li> <li>• Ensure that surface water accumulating on-site are channeled and captured through a proper storm water management system to be treated in an appropriate manner before disposal into the environment.</li> <li>• Disposal of waste from the various activities should be properly managed.</li> </ul>                         |
| <b>Visual and Sense of Place</b> | <ul style="list-style-type: none"> <li>• It is recommended that more 'green' technologies be implemented within the architectural designs and building materials of the development where possible in order to minimise the visual prominence of such a development within the more natural surrounding landscape.</li> <li>• Natural colours and building materials such as wood and stone should be incorporated as well as the use of indigenous vegetation in order to help beautify the development.</li> <li>• Visual pollutants can further be prevented through mitigations (i.e. keep existing trees, introduce tall indigenous trees; keep structures unpainted and minimising large advertising billboards).</li> </ul> |
| <b>Noise</b>                     | <ul style="list-style-type: none"> <li>• Do not allow commercial activities that generate excessive noise levels.</li> <li>• Continuous monitoring of noise levels should be conducted to make sure the noise levels does not exceed acceptable limits.</li> <li>• No activity having a potential noise impact should be allowed after 18:00 hours if possible.</li> </ul>   |
| <b>Emissions</b>                 | <ul style="list-style-type: none"> <li>• Consider tarring of the internal road network.</li> <li>• Manage activities that generate emissions.</li> </ul>   |
| <b>Social Impacts</b>            | No specific mitigation measures are required, only that the local community be consulted in terms of possible job creation opportunities and must be given first priority if unspecialised job vacancies are available.  |

## 8 CONCLUSION

---

### 8.1 CONSTRUCTION PHASE IMPACTS

With reference to **Table 8**, none of the negative construction phase impacts were deemed to have a high significance impact on the environment. The construction impacts were assessed to a **Medium to Low (negative)** significance, without mitigation measures. With the implementation of the recommended mitigation measures in Chapter 7 as well as in the EMP, the significance of the construction phase impacts is likely to be reduced to a **Low (negative)**.

### 8.2 OPERATIONAL PHASE

With reference to **Table 8**, none of the negative operational phase impacts were deemed to have a high significance impact on the environment. The construction impacts were assessed to a **Medium to Low (negative)** significance, without mitigation measures. With the implementation of the recommended mitigation measures in Chapter 7 as well as in the EMP, the significance of the construction phase impacts is likely to be reduced to a **Low (negative)**.

### 8.3 LEVEL OF CONFIDENCE IN ASSESSMENT

With reference to the information available at the project planning cycle, the confidence in the environmental assessment undertaken is regarded as being acceptable for the decision-making, specifically in terms of the environmental impacts and risks. The Environmental Assessment Practitioner believes that the information contained within this FESR is adequate to allow MEFT: DEAF to be able to determine the environmental acceptability of the proposed project.

It is acknowledged that the project details will evolve during the detailed design and construction phases. However, these are unlikely to change the overall environmental acceptability of the proposed project and any significant deviation from what was assessed in this FESR should be subject to further assessment. If this was to occur, an amendment to the Environmental Authorisation may be required in which case the prescribed process would be followed.

### 8.4 MITIGATION MEASURES

With the implementation of the recommended mitigation measures in Chapter 7 as well as in the EMP, the significance of the construction and operational phase impacts is likely to be reduced to a **Low (negative)**. **It is further extremely important to include an Environmental Control Officer (ECO) on site during the construction phase of the proposed project to ensure that all the mitigation measures discussed in this report and the EMP are enforced.**

It is noted that where appropriate, these mitigation measures and any others identified by MEFT: DEAF could be enforced as Conditions of Approval in the Environmental Authorisation, should MEFT: DEAF issue a positive Environmental Authorisation.

### **8.5 OPINION WITH RESPECT TO THE ENVIRONMENTAL AUTHORISATION**

Regulation 15(j) of the EMA, requires *that the EAP include an opinion as to whether the listed activity must be authorised and if the opinion is that it must be authorised, any condition that must be made in respect of that authorisation.*

It is recommended that this project be authorised because should the development not proceed the subject portion will remain vacant and underutilised. Thus none of the positive or negative impacts from the project will realise.

The “no go” alternative was thus deemed to have a **High (negative)** impact, as all the benefits resulting from the development would not be realised.

The significance of negative impacts can be reduced with effective and appropriate mitigation provided in this report and the EMP. If authorised, the implementation of an EMP should be included as a condition of approval.

### **8.6 WAY FORWARD**

The FESR is herewith submitted to MEFT: DEAF for consideration and decision making. If MEFT: DEAF approves, or requests additional information / studies all registered I&APs and stakeholders will be kept informed of progress throughout the assessment process.
