INTRODUCTION AND BACKGROUND

Fly Investments cc proposes to construct and operate a fuel retail facility on Erf 38, Eheke Settlement, Ondangwa Rural Constituency in Oshana Region. The retailer intends to supply fuel to the general public in and around Eheke Settlement.

Nghivelwa Planning Consultants has been appointed to conduct an Environmental Impact Assessment and Environmental Management Plan (EMP) for the proposed Gwakapiya Service Station on Erf 38, Eheke. The Environmental Impact Assessment has been conducted to meet the requirements of Namibia's Environmental Management Act (No. 7 of 2007) and Petroleum Products and Energy Act (Act No. 13 of 1990).

The purpose of the EMP report is to proactively address potential problems before they occur. This will ensure that damage to the environment during the construction phase is avoided and, mitigation measures to be implemented to minimize environmental degradation.

PROJECT DESCRIPTION

The proposed activity involves the construction of a fuel retail facility that is situated on Erf 38, Eheke Settlement, Ondangwa Constituency, Oshana Region. The proposed new service station will be known as Gwakapia Service Station. The site is situated along the main road from Okapya to Omagongati and its GPS coordinates are: (17°55.525' S; 15°52.181' E).

The site is currently owned by Fly Investments CC who are the proponents. The Proponent intents to undertake the following activities;

- two underground storage tanks (fiber-reinforced resin coated steel tanks):
- a) (i) One 46,000-litre capacity underground fuel storage tanks for unleaded petrol
- b) (ii) One 46,000-litre capacity underground fuel storage tank for 500ppm diesel
- c) 4 pump islands
- d) Fire protection equipment as per project drawing plans

- e) Necessary fittings and other works as per the project drawing plans
- f) Canopied forecourt with dispensing pumps;
- g) In addition, current practice is to include facilities such as a convenience store and car wash in the overall filling station design.

SCOPE

The framework within which this Environmental Management Plan Report (EMP) is developed includes identifying various activities, their occurrence in the construction process and the likely impacts that are associated with those activities. It is therefore necessary to subcategorize the EMP report into Pre-Construction, Construction and Post-Construction activities.

The first category of the EMP report deals with the pre-construction activities that identifies the impacts and mitigation measures that will need to be employed before the construction of the fuel retail facility commences. The second category deals with the construction activities and the mitigation measures that will need to be applied to reduce the severity of the impacts the proposed development may have on the surrounding environment.

The third category discusses the rehabilitation measures that will need to be implemented once the construction is completed, to ensure that the impact of the proposed rehabilitation on the environment is minimized. Furthermore, it will discuss activities that need to be undertaken to ensure that no environmental degradation occurs as a result of the project.

The construction, operation and decommissioning phases involves:

- ➤ The installation of the new fuel storage facilities.
- ➤ Installation of fuel network pipelines and associated dispensing points.
- Transport of fuel with road transport tanker trucks.
- Dispensing and reticulation of fuel.
- > Removal of tanks, pipelines and dispensing equipment.
- Removal of associated buildings and other infrastructure.

The fuel retail facility will be supplied with fuel by fuel tanker trucks.

This environmental management plan (EMP) aims to take a pro-active approach by addressing potential problems before they occur. This should limit the corrective measures needed, although additional mitigating measures might be included if necessary.

POLICY AND OTHER RELEVANT LEGISLATIONS

The following are the legal instruments that controls the construction and operation of Fuel Retail Facilities in Namibia.

The Namibian Constitution

The Constitution of Namibia encourages wise and sustainable use of its resources. According to Article 95 of Namibia's Constitution, the State shall actively promote and maintain the welfare of the people by adopting policies aimed at the maintenance of ecosystems, essential ecological processes and biological diversity of Namibia and utilization of living natural resources in a sustainable way for the benefit of all Namibians, both present and future.

Article 95 of Namibia's constitution stipulates that: "The State shall actively promote and maintain the welfare of the people by adopting, inter alia, policies aimed at the following:

(l) management of ecosystems, essential ecological processes and biological diversity of Namibia and utilization of living natural resources on a sustainable basis for the benefit of all Namibians, both present and future; in particular, the Government shall provide measures against the dumping or recycling of foreign nuclear and toxic waste on Namibian territory."

This article recommends that a relatively high level of environmental protection is called for in respect of pollution control and waste management.

Environmental Assessment Policy (1994)

The environmental assessment policy details the principles of achieving and maintaining sustainable development that underpin all policies, programmes and projects undertaken in Namibia. This is related in particular, to the wise utilization of the country's natural resources, together with the responsible management of the biophysical environment, which is intended to benefit both present and future generation. The policy also provides guidance on undertaking the assessment procedures.

It further provides a guideline list of all activities requiring an impact assessment. The proposed development is listed as a project requiring an impact assessment as per the following points in the policy:

- Transportation of hazardous substances & radioactive waste.
- Storage facilities for chemical products.
- Industrial installation for bulk storage of fuels.

The policy provides a definition to the term "environment" - broadly interpreted to include biophysical, social, economic, cultural, historical and political components and provides reference to the inclusion of alternatives in all projects, policies, programmes and plans. Cumulative impacts associated with proposed developments must be included as well as public consultation. The policy further requires all major industries and mines to prepare waste management plans and present these to the local authorities for approval.

Apart from the requirements of the Environmental Assessment Policy, the following sustainability principles need to be taken into consideration, particularly to achieve proper waste management and pollution control:

Cradle to Grave Responsibility

This principle provides for those who manufacture potentially harmful products to be liable for their safe production, use and disposal and that those who initiate potentially polluting activities should be liable for their commissioning, operation and decommissioning.

Precautionary Principle

There are numerous versions of the precautionary principle. At its simplest it provides that if there is any doubt about the effects of a potentially polluting activity, a cautious approach should be adopted.

The Polluter Pays Principle

A person who generates waste or causes pollution should, in theory, pay the full costs of its treatment or of the harm, which it causes to the environment.

Public Participation and Access to Information

In the context of environmental management, citizens should have access to information and the right to participate in decisions making.

Environmental Management Act of Namibia (Act 7 of 2007)

The Environmental Management Act, 2007 (Act No.7 of 2007) specifies the environmental assessment procedures to be followed and the activities that required to carry out an EIA. The Act provides a procedure for environmental assessments as indicated under Part VII and Part VIII, which is set out to:

- better inform decision makers and promote accountability in decisions taken;
- > strive for public participation and involvement of all sectors of the Namibian community in the environmental assessment process;
- take into account the environmental costs and benefits of proposed policies, programmes and projects;
- take into account the secondary and cumulative environmental impacts of policies, programmes and projects; and
- ➤ Promote sustainable development in Namibia, and ensure that a reasonable attempt is made to minimize the anticipated negative impacts and maximize the benefits associated with the development.

Environmental Management Act, 2007 Regulations (2012)

The Environmental Management Act Regulations have been used as guidance in the compilation of this scoping report. The regulations set out the process to be followed during the compilation of EIA reports as well as the minimum requirements for such reports.

National Heritage Act No. 27 of 2004

The Heritage Act of 2004 makes provision for the developer to identify and assess any archaeological and historical sites of significance. The existence of any such sites should be reported to the Monuments Council as soon as possible. The Council may serve notice that prohibits any activities as prescribed within a specified distance of an identified heritage/archaeology site.

Water Resource Management Act on Namibia (2004)

The Water Resources Management Act, No.24 of 2004 provides for the management, development, protection, conservation, and use of water resources; to establish the Water Advisory

Council, the Water Regulatory Board and the Water Tribunal; and to provide for incidental matters. Section 25 obliges the Minister of health to ensure that the water supply is healthy and safe.

Petroleum Products and Energy Act of Namibia (Act No. 13 of 1990)

"To provide measures for the saving of petroleum products and an economy in the cost of the distribution thereof, and for the maintenance of a price therefore; for control of the furnishing of certain information regarding petroleum products; and for the rendering of services of a particular kind, or services of a particular standard, in connection with motor vehicles; for the establishment of the National Energy Fund and for the utilization thereof; for the establishment of the National Energy Council and the functions thereof; for the imposition of levies on fuel; and to provide for matters incidental thereto". *Regulated by the Ministry of Mines and Energy*

Pollution Control and Waste Management Bill (guideline only)

With reference to the above, only Parts 2, 7 and 8 applies to the proposed development of the fuel retail facility (Gwakapia Service Station) on Erf 38, Eheke Settlement. Part 2 states that no person shall discharge or cause to be discharged any pollutant to the air from a process except under and in accordance with the provisions of an air pollution licence issued under section 23. And also further provides for procedures to be followed in licence application, fees to be paid and required terms of conditions for air pollution licences.

Part 7 stipulate that any person who sells, stores, transports or uses any hazardous substances or products containing hazardous substances shall notify the competent authority, in accordance with sub-section (2), of the presence and quantity of those substances. The competent authority for the purposes of section 74 shall maintain a register of substances notified in accordance with that section and the register shall be maintained in accordance with the provisions. Part 8 provides for emergency preparedness by the person handling hazardous substances, through emergency response strategies.

Atmospheric Pollution Prevention Ordinance of Namibia (No. 11 of 1976)

Part 2 of the Ordinance governs the control of noxious or offensive gases. The Ordinance prohibits anyone from carrying on a scheduled process without a registration certificate in a controlled area. The registration certificate must be issued if it can be demonstrated that the best practical means are being adopted for preventing or reducing the escape into the atmosphere of noxious or offensive gases produced by the scheduled process.

Regulated by the Ministry of Health and Social Services

Hazardous Substances Ordinance (No. 14 of 1974)

The Ordinance applies to the manufacture, sale, use, disposal and dumping of hazardous substances, as well as their import and export and is administered by the Minister of Health and Social Welfare. Its primary purpose is to prevent hazardous substances from causing injury, ill-health or the death of human beings. *Regulated by the Ministry of Health and Social Services*.

Public Health Act (Act 36 of 1919)

Section 111 makes provision that requires the local authorities to take measures for the prevention of water pollution. Section 119 provides that no person shall cause a nuisance or shall suffer to exist on any land or premises owned or occupied by him or of which he is in charge any nuisance or other condition liable to be injurious or dangerous to health.

Section 120 requires local authorities to take measures for maintaining their district at all times in a clean and sanitary condition and for preventing the occurrence therein of, or for remedying or causing to be remedies, any nuisance or condition liable to be injurious or dangerous to health. Various forms of nuisances are set out in section 122. For present purposes the following are most relevant:

a) any dwelling or premises which is or are of such construction or in such a state or so situated or so dirty or so verminous as to be injurious or dangerous to health or which is or are liable to favour the spread of any infectious disease;

(e) any accumulation or deposit of refuse, offal, manure or other matter whatsoever which

is offensive or which is injurious or dangerous to health;

g) any public building which is so situated, constructed, used or kept as to be unsafe, or

injurious or dangerous to health;

(k) any area of land kept or permitted to remain in such a state as to be offensive, or liable

to cause any infectious, communicable or preventable disease or injury or danger to health;

(l) any chimney (not being the chimney of a private dwelling) sending forth smoke in such

quantity or in such manner as to be offensive or injurious or dangerous to health;

(n) any other condition whatever which is offensive, injurious or dangerous to health.

The local authority may serve a notice on the author of the nuisance. Should the author refuse or

fail to comply the local authority must approach a magistrate to lodge a complaint where upon the

latter is required to issue a summons on the author to appear before court.

MANAGEMENT PRINCIPLES

These guideline principles will form the basis for environmental management on site. Should these

principles require modification or additions during the project this should be done at the discretion

of the responsible person, who will ensure that any modifications are communicated, explained to

and discussed with all affected parties (i.e. the authorities, Fly Investment CC/developer, the

contractors and service providers, and any affected party who requests this information).

The environmental operational procedures and environmental issues are identified and managed,

under different phases of the project. The different phases are:

➤ Pre-construction (including design);

Construction Phase:

> Operational Phase; and

operational mase, and

Decommissioning Phase

11

Environmental Issues to be Managed

Pre-Construction Phase

- ➤ The Ministry of Environment and Tourism (MET) must be notified:
 - Within 30 days, of change of ownership / developer.
 - Of any change of address of the owner / developer.
 - One month prior to commencement of construction activities.
 - One month prior to commencement of operation.
- ➤ The owner / developer must ensure to comply with the conditions described in the Record of Decision.
- ➤ If required by the Record of Decision, advertise the authorisation for one day for two consecutive weeks in two local newspapers.
- ➤ Records of all environmental incidents must be maintained, and a copy of these records be made available to the Ministry of Environment and Tourism (MET) on request throughout project execution.

Construction and Operational Phases

Unless otherwise indicated, the responsibilities of the construction contractor(s) and service providers will adhere to specified EMP actions for the construction phase. During the operational phase, Fly Investment CC will ensure that the following actions are implemented by establishing accountability and responsibility between the different role players.

Consultation with Interested and Affected parties (IAPs)

During these two phases the Construction and Operational Phases, it is of great importance to establish an open communication channel between Fly Investment CC (Gwakapia Service Station)/ the developer, the contractors and IAPs such that any queries, complaints or suggestions can be dealt with quickly and by the appropriate person(s).

ROLES AND RESPONSIBILITIES

This section describes the roles and responsibilities of the key stakeholders involved in the development, implementation and review of the EMP. The contractor in this report refers to Fly Investments CC and its appointed contractors.

Competent Authority

The Department of Environmental Affairs: Ministry of Environment and Tourism is responsible for the review of the EMP documents it is the competent authority.

Fly Investments CC

The role of the applicant is as follows:

Fly Investments CC as the applicant, should hire suitably qualified person(s) and assign them with the responsibility to ensure implementation of the EMP, and should:

- ➤ Know the contents and implications of the EIA and monitor the implementation of EIA findings using the EMP.
- Revise the EMP as required and inform the relevant parties of the changes.
- The applicant should Review report regarding the implementation of the EMP and make payments to the Contractor if the EMP is being implemented in a satisfactory manner.
- ➤ Give warnings and impose fines and penalties on the Contractor if the Contractor neglects to implement the EMP satisfactorily.
- Protect the environment and rehabilitate the environment as prescribed in the EIA.

Fly Investments CC (Project Manager)

The Applicant will appoint the Project Manager. The role of the project manager will be:

➤ Liaising directly with the relevant authorities with respect to the preparation and implementation of the EMP and meeting the conditions documented in the environmental clearance certificate.

- ➤ Bear the overall responsibility for managing the project contractors and ensuring that the environmental management requirements are met.
- ➤ Inform the contractors of the EMP and Environmental clearance certificate obligations.
- ➤ Approve all decisions regarding environmental procedures and protocols that must be followed.
- ➤ Have the authority to stop any construction in contravention with the EMP and RoD.
- ➤ In consultation with the Environmental Control Officer (ECO) has the authority to issue fines for transgressions of basic conduct rules and/or contravention of the EMP.
- Maintain open and direct lines of communication between the proponent, Contractor and Interested and Affected Parties (I&APs) with regards to environmental matters.
- Attend regular site meetings and inspections where required.

Fly Investment CC (Environmental Control Officer)

An Environmental Control Officer (ECO) should be employed by the Contractor. This person should be available for the duration of the construction period and should have appropriate training and experience in the implementation of the EMP and overseeing construction process. This ECO will implement EMP at all levels and sections (sub-contractors) during the construction of Gwakapia Service Station. The responsibilities of the ECO include the following:

- ➤ Assist the Project Manager and Contractor in finding environmentally responsible solutions to challenges that may arise.
- ➤ Conduct environmental monitoring as per EMP requirements.
- ➤ Monitor performance of the contractors and ensure compliance with the EMP and associated method statements.
- Maintenance, update and review of the EMP.
- ➤ Liaison between the contractors, authorities and other key stakeholders on all environmental concerns.
- ➤ Validating regular site inspection reports which are prepared by the Contractor's Environmental Officer (EO).

- ➤ Checking the EO's record of environmental incidents as well as corrective and preventative actions taken.
- ➤ Checking the EO's public complaints register in which all complaints are registered and actions taken thereof.
- > Issuing site instructions to the contractors ECO for corrective actions required.
- > Assisting with the resolution of conflict.
- Communicate all amendments of the EMP to the relevant stakeholders.
- > Conduct monthly audits to ensure that the system for implementing the EMP is effective.

Contractor's Safety Officer

- Implement the recommendations in the EIA and satisfy the conditions in the RoD.
- Ensure that safety is practiced for all activities on site.
- > Prepare and implement safety procedures
- ➤ Communicate all safety related issues

Contractors

The contractor should appoint the Contactor's representative who is suitably qualified to implement the EMP. The responsibilities of the Contractor include:

- ➤ Compliance with the relevant legislation and the EMP.
- ➤ Preparation and submission to the proponent through Project Manager the following Management Plans prior to commencing work:
- ➤ Environmental Awareness Training and Inductions;
- > Emergency Preparedness and Response;
- ➤ Waste Management; and
- > Health and Safety.
- Environmental awareness presentations (inductions) to be given to all site personnel prior to work commencement; the ECO is to provide the course content and the following topics, at least but not limited to, should be covered:

- The importance of complying with the relevant Namibian, International and Best Practice Legislation.
- Roles and Responsibilities, including emergency preparedness.
- Basic Rules of Conduct (Do's and Don'ts).
- EMP: aspects, impacts and mitigation;
- Fines for Failure to Adhere to the EMP;
- Health and Safety Requirements.
- Record keeping of all environmental awareness training and induction presentations; and
- Attend regular site meetings and environmental inspections.

Resident Engineer (RE)

The Resident Engineer (RE) will be appointed by the 'Consultant' and will be required to oversee the construction program and construction activities performed by the Contractor. The RE is expected to liaise with the Contractor and ECO on environmental matters, as well as any relevant engineering matters where these may have environmental consequences.

PHASES OF THE PROJECT

The Construction Phase

The bulk of the impacts during this phase will have immediate effects (e.g. noise, dust and water pollution). If the site is monitored on a continual basis during the construction phase, it is possible to identify these impacts as they occur. These impacts can then be mitigated through the contingency plans identified in the planning phase, together with a commitment to sound environmental management from the developer.

	The contractor must make use of local labour where possible in order to stimulate the local economy.		
	When recruiting, the responsible contractor should ensure gender equality is taken into consideration that both men and women are employed equally and treated equally.		

Equity, transparency, should be put into account when hiring and recruiting and that Public Participation I.e. Community Leaders or Community committees should also take part in the recruiting process for decision makings.	
No employment applications may take place at the entrance to the site, formal employment channels must be used.	

The Operational Phase

By taking pro-active measures during the planning and construction phases, potential environmental impacts emanating during the operational phase will be minimised. This, in turn, will minimise the risk and reduce the monitoring effort, but it does not make monitoring obsolete.

ENVIRONMENTAL MONITORING PLAN

Environmental monitoring plan is part of the EMP performance assessment and will need to be compiled and submitted as determined by the Environmental Commissioner. The process of monitoring performances against the objectives and documenting all environmental activities is part of internal and external auditing. This will be coordinated by the Environmental Control Officer (ECO) / External Consultant / Suitable qualified in-house resource person. Tables 3 outline the type of information that shall need to be recorded on a regular basis by the Environmental Control Officer (ECO) as part of the monitoring process of the activities and the effects.

Mitigation	Compliance	Follow-up action required	By whom	By When	Completed
Is there an Environmental awareness					
training programme?					
How many people have been given					
environmental awareness					
Is a copy of the EMP on site?					
How effective is the					
awareness training?					

Do people			
understand the			
contents of the			
EMP?			
If not, where			
are the			
weaknesses?			
Ask 3 people			
at random			
various			
questions			
about the			
EMP.
