TRINITY ENVIRONMENTAL SOLUTIONS

#### ENVIRONMENTAL IMPACT ASSESSMENT (EIA) NOTICE TO ALL INTERESTED AND AFFECTED PARTIES

This notice serves to inform all Interested and Affected Parties (I&APs) that an application for an Environmental Clearance Certificate will be made to the Environmental Commissioner as per the Environmental Management Act (No. 7 of 2007) and Government Notice No. 30 of 2012 (EIA Regulations).

Project Name: Quagga Camp and Leisure

Project Location: Ozondati Village, Ohungu Conservancy

Project Description: Construction of an Eco-Friendly Tourism Camp and Leisure Facility

Proponent: Mrs. Silba Ndjiharine

In line with the Environmental Management Act (No. 7 of 2007), all I&APs are invited to submit comments and questions with regard the proposed development and to register. The submission of comments and questions, and to register should be done by 08 December 2023.

Public Meeting will be held on: 1. 25 November 2023, 14:00-17:00 PM in Ozondati

To register or to submit your contributions, please contact TES at:

Email: trinityenvir@iway.na, tes.namibia@gmail.com

Subject:	APPLICATION FOR ENVIRONMENTAL IMPACT ASSESSMENT FOR THE PROPOSED CONSTRUCTION AND OPERATION OF THE PROPOSED
	AQUACULTURE AND FISH FARMING ON PTN 60 (A PORTION OF PORTION 24) OF THE FARM NO 163 SWAKOPMUND, ERONGO REGION
Attachments:	23-0989 Fish Farm BID.pdf

Dear Potential Interested and Affected Party

GCS Water Environmental Engineering Namibia (Pty) Ltd (GCS) hereby give notice to all potentially Interested and Affected Parties (I&APs) that an application will be made to the Environmental Commissioner in terms of the Environmental Management Act (No 7 of 2007) and the Environmental Impact Assessment Regulations (GN 30 of 6 February 2012) for the below.

# • Construction and Operation of an aquaculture and fish farming on Portion 60 (a Portion of Portion 24) of the Farm No 163 in Swakopmund, Erongo Region.

GCS has been appointed by Synergy Farms Namibia (Pty) Ltd to conduct the Environmental Impact Assessments (EIAs) and submit the required reports to the Environmental Commissioner as part of an application to apply for the Environmental Clearance Certificates (ECCs) in accordance with the Environmental Management Act (7 of 2007) and its 2012 Regulations.

Public consultation forms part of the EIA process. As part of the public consultation process, you have been identified as a potential interested and affected party with respect to the proposed activity, which is why you are receiving this email.

Furthermore, a public meeting is scheduled to be held to provide more information regarding the proposed activities and to allow Interested and Affected Parties (I&APs) an opportunity to comment on the proposed activities. The public meeting is scheduled to be held as follows:

Date: 07 December 2023

Time: 17h30

Venue: Gecko Ridge, Swakopmund

Should you wish to send us any potential issues or comments that you would like to be considered as part of the impact assessment process and addressed in the scoping report, please send us your inputs before the end of business on **Wednesday**, **13 December 2023**.

Once the scoping stage is completed, GCS will provide you with access to the draft scoping report, for your review, and you will have another opportunity to submit comments based on your review.

Please do not hesitate to contact us should you have any questions regarding the proposed activity and its EIA process.

Kind regards,

## **Meeting Minutes**

Subject:	Public Participation Meeting for the Environmental Impact Assessment for the Proposed Aquaculture and Fish Farming on Portion 60 (a Portion of Portion 24) of the Farm No 163 Swakopmund, Erongo Region
Venue:	Gecko Ridge, Swakopmund
Date:	07 December 2023
Time:	17h30
Attendance:	See attached attendance register.

#### 1 INTRODUCTION

The meeting was opened by Ndeshihafela Neliwa the Environmental Consultant from GCS Water Environmental Engineering Namibia (Pty) Ltd (GCS). Ndeshihafela proceeded with the oral presentation after which the floor was opened to questions. This opened an interactive session between the consultant and the public members.

#### 2 OVERVIEW OF PROPOSED PROJECT

The presentation provided a background to the aquaculture and fish farming project. Ndeshihafela additionally explained the process to be followed during the Environmental Impact Assessment (EIA), highlighting that part of the process is to engage the interested and affected parties (I&APs), hence the meeting. Ndeshihafela further identified some of the preidentified potential environmental impacts that will be assessed in the EIA process. The presentation also indicated the various public participation activities which have been undertaken to date. The presentation was concluded with the provision of the details of how I&APs can become involved and provided details of the communication platforms available and indicating that the project is open for public participation until submission is done to the Ministry of Environment, Forestry and Tourism (MEFT).

#### 3 QUESTIONS AND COMMENTS REGARDING THE PROPOSED PROJECT

The issues/concerns raised by the attendants during the meeting are presented in the table below:

#### Table 2-1: Questions and comments raised during the meeting.

Question/Comment By	Question/Comment	Respondent	Response
Kent Stewart	What is your goal, are there any veggies, and what do you guarantee the nearby farmers?	Sara Davis (Synergy Farms)	The goal is to operate a fish farm. Yes, there are vegetables, but it is unlikely to impact farmers since we all have different consumers.
Cathy Ellis	Given that you are growing veggies, what will become of the local produce?	Sara Davis (Synergy Farms)	Since we already have a vegetable garden, this won't have an impact on the products that farmers produce.
Christine Ereest	Does Namibia have a system similar to this in place?	Sara Davis (Synergy Farms)	Thank you for your question. Yes, there is a comparable project in Groot Aub, which is near Windhoek.
John Meinert	Why are you drawn to this location and why are you utilizing desalinated water?	Sara Davis (Synergy Farms)	The project site is suitable for the proposed project, even though there was no particular reason for us to select this location. Freshwater will be used in the project.

#### 4 WAY FORWARD

The documented questions and comments from the meeting will be incorporated and fully addressed in the Environmental Scoping Report. This report will be circulated to all registered I&APs for review before it can be submitted to the Ministry of Environment, Forestry and Tourism: Department of Environmental Affairs and Forestry for evaluation.

#### 5 CONCLUSION

After the attendees had all raised their points and comments, Ndeshihafela Neliwa gave a vote of thanks. The meeting was adjourned at 19:00.

45 Feld Street, Windhoek, Namibia PO Box 81808, Windhoek, Namibia **Tel:** (+264) 61 248 614 **Fax:** (+264) 61 238 586 **Web:** www.gcs-na.biz

11 December 2023

Dear Ms Shikwaya,

#### RE: Synergy Farms Namibia Pty Ltd proposed Aquaculture and Fish Farm on PTN 60 of Farm No 163 Swakopmund, Erongo Region (GCS Project Number: 23-0989)

The operation of a fish farm will inevitably produce various forms of pollution which is of significant concern for neighbours and will have an impact on them.

Please find below the list of comments/concerns for which we kindly request feedback.

Listed in order of priority:

- Noise pollution. This will have significant impact on residents and animals in the area thus please provide information regarding how this will be addressed, including the below points:
  - The operation of the mentioned Blowers will produce noise. Please indicate how many Blowers will be operational, their operating hours (including after hours and weekends, etc.), the noise levels they will produce (each and simultaneously), etc. How will this be mitigated?
  - The operation of the backup generator. This device will add significant noise pollution when operating. How will this be mitigated?
  - I believe that blowers and other devices that create noise pollution will be operating 7 days a week? How will the noise be mitigated on the weekends etc. for residents?
- 2. Waste Pollution:
  - Fish farming produces waste fertilizer, waste water, fish waste. How are these going to be dealt with and environmentally disposed of and removed from site?
- 3. Visual Impact:
  - I understand that the fish ponds will be constructed from concrete and then covered with tunnels. Please could you indicate how many tunnels and the positioning of such tunnels on the plot. Both for the initial phase which includes 0.018 hectares under tunnel and the second phase referred to in your BID document.
- 4. Air Pollution
  - Fish farming produces odours that are not particularly pleasant. How will this be prevented?

- I understand that the fish tanks have to be "fertilized before the fish are added", how will you prevent the fertilizer dust from being blown onto neighbouring plots by the prevailing winds.
- 5. Light Pollution:
  - I would like to enquire to the light impact that the development would have on the river bed and plots? For example, are you expecting the lights to be on at night at the fish farm? If so, how are you planning to mitigate this?

In relation to the construction phase:

Please find below the list of comments/concerns for which we kindly request feedback.

- 1. Social Impact:
  - a. Where will the contractors stay during construction? Previous construction sites failed to provide sufficient ablutions and services for people working which resulted in workers using my neighbouring plot as a lavatory. This is unhygienic and socially unacceptable and we would like to stop this from happening again. Please indicate how you will do this and can guarantee no impact on neighbours?
  - b. The River plots is also a residential area. During the construction phase, will there be work on weekends? If so, how are you going to mitigate the noise, pollution etc. from the construction phase?
  - c. Please confirm that during the construction phase the electricity will have been connected beforehand so as to minimise the use of the backup generator for power – minimise noise pollution?
  - d. How long is the construction phase expected to last?

Please could you also inform us regarding the next timelines and dates for further comment or any further consultation or meetings that may take place.

We look forward to your feedback. Many thanks,

Abigail Guerier Tel: +264 81 263 0149 Email: abby.sg@icloud.com

#### 1. Noise pollution

Blowers will be operated inside the greenhouse structures. This will reduce noise, and noise will be further reduced through the use of commercially available blower mufflers:

#### https://www.solbergmfg.com/en/filters-traps-silencers/silencers/slcr-slcrt-series

Any blowers for aeration outdoors will also be muffled and should be housed in block enclosures – see below comments for standby generator(s).

Similarly, sound reduction options for the generator building are widely available:

https://www.grainger.com/product/1VDP5?gucid=N:N:PS:Paid:GGL:CSM-2295:4P7A1P:20501231&gad\_source=1&gclid=EAIaIQobChMIkdWShbywgwMVC6BaBR0UAQHLEAYYCC ABEgJ9avD\_BwE&gclsrc=aw.ds

Blowers will operate 24/7, and will be muffled at all times. The standby generator will only operate when required, and for short periods to guarantee proper functioning whenever two weeks have passed without use.

#### 2. Waste pollution

Water will be completely recycled, and only lost to evaporation. There will be no wastewater discharge. Solids will be removed via gravity flow through welded wire sieves and concentrated for drying. This approach is widely used in both food industries and wastewater treatment.

https://www.alibaba.com/product-detail/welded-sieve-wedge-bend-wire-screen\_1862946695.html

Solids will be solar dried aerobically, generating negligible odor:

https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5639799/

Some fish mortality will occur. This material can be composted, digested to produce methane and subsequently dried, or dried directly. Any of these methods, if practiced correctly, will result in negligible odor:

#### https://sciresol.s3.us-east-2.amazonaws.com/IJST/Articles/2015/Issue-33/Article42.pdf

3. Visual impact...

Greenhouses will have a low profile – perhaps appropriate landscaping could further reduce any adverse impacts?

#### 4. Air pollution

Fish farming rarely produces unpleasant odors except in ponds with high fertility and poor management. These odors are caused by metabolites of blue-green algae (cyanobacteria), specifically geosmin and MIB. Raising tilapia in aerated greenwater recirculating systems avoids this problem due to their continuous filter feeding of any large algae cells that are present:

#### https://link.springer.com/article/10.1007/s10750-015-2406-y

To the extent that the fish tanks have to be fertilized before the fish are added, this will of course take place within the greenhouses. There will be no dust involved, inasmuch as only liquid or granular inorganic fertilizer will be used, and added directly to the water:

https://thefishsite.com/articles/how-to-start-a-biofilter

Nitrifying bacteria will be transferred from Synergy Farms existing aquaponics facility.

5. Light pollution

It is not necessary, nor recommended, to maintain illumination 24/7 within the greenhouses. The system will function better and feed efficiency will be optimized with natural photoperiod – extended with lighting to 14 hours of light per day when required in the winter months.

#### https://www.sciencedirect.com/science/article/pii/S2468550X20300204

The only other night-time illumination will be limited to strategically placed security lights that can be directed away from the neighboring plots and riverbed.

Social Impact of Construction phase...

#### Construction phase

- 1. Social impact
  - a. Where will contractors stay? -All construction will be performed by local contractors and their laborers for intentional social benefit to the community. The construction team will be sourced from Swakopmund or nearby areas and no work will be performed overnight nor will hired labor reside on the plot.
  - b. Will there be weekend construction work? The construction phase is short term projected to be complete within 3-4 months for the building of the hatchery and greenhouse. It is not anticipated that work will be performed on weekends, however if required, time frames will be adhered to being 8am 4pm.
  - c. Please confirm electricity will be connected for construction to reduce use of noisy generators. It is understood that noise control is of importance to IAP's. Construction guidelines will be in place to mitigate disruptions to the community. These guidelines will be made available the neighborhood at the time of construction.
  - d. Timeframe for construction? 3-4 months.
