

APPENDIX B: PUBLIC CONSULTATION

Friday, 26 April 2024

NATIONAL NEWS

2

Mining Sector ...

Continued From Pg 1

a noteworthy 98.5% increase. This surge reflects the mining industry's robust profitability, directly contributing to higher corporate tax payments.

Kasete emphasised the substantial gains derived from corporate income taxes as mining operations become more profitable.

Furthermore, the increase in government revenue was attributed to a rise in royalties by 17.6% and export levies by 45%, supported by increased production and favourable pricing for gold and uranium.

"The higher royalties and export levies were supported by increased production, a weaker exchange rate, and higher prices for gold and uranium," he said.

The mining industry showcased remarkable financial growth in 2023, with total turnover recorded by Chamber members soaring to N\$51.572 billion, marking a 35.9% increase from 2022.

This surge was fueled by various factors, including a weaker exchange rate, elevated prices for gold and uranium, and augmented production levels of these minerals along with diamonds.

Kasete also highlighted a notable improvement in overall profitability, with a collective profit of N\$2.731 billion in 2023, attributed largely to B2Gold's Otjikoto mine.

Additionally, the mining sector witnessed a significant rise in direct employment, with a 12.6% increase in the number of individuals employed within the industry in 2023.

"Total direct employment increased by 12.6% in 2023 to 18,189, from 16,147 in 2022," the Kasete stated. According to him, this increase in direct employment was primarily due to the creation of new positions resulting from the restart of the Langer Heinrich mine and expansions at other operations.

Breaking down the figures, Kasete disclosed that direct employment comprised 8,950 permanent employees, 803 temporary employees, and 8,436 contractors.

"Every job created by the industry also generates important sources of revenue for the government through Pay As You Earn (PAYE) and Value Added Tax (VAT) as a consumption tax. In 2023, employees from mining companies paid N\$1.493 billion in PAYE," he said.

He also highlighted the significant contribution of mining employees to government revenue, with N\$1.493 billion paid in PAYE in 2023.

The majority of individuals employed by the mining sector were Namibians, constituting approximately 97% of the mining workforce, contributing to the circulation of N\$6.865 billion in wages within Namibia's borders and generating local economic spin-offs.

OPEC Ready to Support ...

Continued From Pg 1

"We are excited about the potential of the Namibian OPEC partnership and stand ready to offer support at this crucial juncture. We are enthused by the discoveries in Namibia. Namibian oil and energy will be essential to meeting future demand," Al Ghais said.

The OPEC+ oil producers' group is considering Namibia for potential membership to commence oil production by the next decade, spurred by a series of significant discoveries.

Highlighting the significant discoveries made by companies like TotalEnergies and Shell, estimated at 2.6 billion barrels, Al Ghais emphasised the transformative potential for Namibia's economy and employment landscape.

These developments are anticipated to create thousands of jobs and drive economic growth in the country.

"We encourage potential investors to explore the abundant opportunities available in Namibia," Al Ghais added.

Earlier this month, the international press reported that the initial focus for OPEC+ is on expanding its membership, which includes Russia, to include Namibia in its Charter of Cooperation.

"We would be happy to intensify cooperation with Namibia across a broad range of fronts. Namibian oil will be vital in meeting the future

oil demand and consumers around the world," he emphasised.

The secretary-general said that this is clear when considering the demographic and economic direction of travel that the world is set to embark on in the next few decades.

At the time of the event, the Mines and Energy Minister Tom Alweendo had not commented on this statement by OPEC.

In response to OPEC's overture, Mines and Energy Minister Tom Alweendo underscored the importance of the local content policy in maximising benefits for Namibians from these discoveries.

"For the oil companies to play their role regarding the Namibian content (local content), it will be necessary and a requirement for them to submit to us their annual capacity building and Namibian Content plans," the minister explained.

In addition to Total and Shell, companies such as Chevron, Rhino Resources, Eco Atlantic Oil & Gas, and Galp Energia are currently engaged in exploration and appraisal activities in Namibia.

Based on the existing discoveries, Namibia is projected to reach a peak production capacity of 700,000 barrels per day (bpd) by the next decade, as estimated by energy consultancy Rystad Energy.

Rough Diamonds ...
Continued From Pg 1

diamond sector as part of its supply strategy, supplying rough diamonds to 15 local processing companies, which employ 1,300 Namibians in diamond polishing and cutting.

This local processing initiative has not only created sustainable jobs in the downstream industry but has also spurred investment in technology and infrastructure within the cutting and diamond polishing sector.

For the 2023 financial year, NDTC declared N\$100 million in dividends to its shareholders, the Namibian government and De Beers.

Since its inception in 2007, NDTC has disbursed N\$2.8 billion in dividends to its shareholders and paid N\$84 million in corporate tax for the 2023 fiscal year, totaling N\$1.5 billion in tax payments since its establishment.

As the country's diamond value chain continues to evolve, NDTC paid N\$197 million in export levy for 2023, bringing the total export levy paid since 2007 to N\$953 million.

Eiseb acknowledged the challenges faced by the diamond sector in 2023, including lacklustre consumer demand in China, increasing interest rates, inflation, and the rise of lab-grown diamonds in the USA, coupled with China's ban on rough diamonds.

While some stability has been observed in the industry in the first two months of 2024, attention is now focused on the remainder of the year amidst restrictive measures introduced by the G7 against Russian diamonds.

To enhance transparency in the diamond supply chain and meet customers' growing demands for ethical practices, NDTC is implementing technology to ensure proper documentation (provenance capture) of Namibian stones, allowing end-users to trace the journey of polished diamonds back to their source in Namibia.

Eiseb emphasised that diamond provenance assurance is becoming a key priority in the industry, especially with impending import restrictions by G7 nations.

Established in 2007 through an agreement between the Namibian government and De Beers Holding, NDTC plays a crucial role in sorting, valuing, and selling rough diamonds mined in

Namibia, as well as fostering the development of the local downstream industry.

Maize Production...
Continued From Pg 1

These figures are according to the Crop Prospect, Food Security, and Drought Situation Report of March 2024.

The report further reveals that Pearl millet production stands at 15,900 MT, representing a 22% decrease from the previous season's harvest of 20,500 MT.

Additionally, sorghum production is estimated at 1,500 MT, reflecting a decrease of 32% from last season's harvest of 2,200 MT.

The decline in harvest across these crops is largely attributed to the adverse effects of drought conditions and prolonged dry spells experienced during the 2023/2024 season.

Wheat production in the commercial sector is estimated at 15,300 MT, which marks a 33% decrease from last season's harvest of 22,800 MT.

The Namibian Agronomic Board attributes this decline to the prevailing devastating drought conditions, coupled with a substantial reduction in the number of farmers, particularly from the private sector.

Many of these farmers rely on rain-fed agriculture, which has further reduced the total planted area.

The report also indicates a weakening of household food security in various parts of the country, following reduced agricultural production in the 2022/2023 season.

In many communal crop-producing regions, households have depleted their previous season's food stocks and now rely heavily on the market and drought relief food.

Similarly, the household food security situation in southern, eastern, western, and central Namibia is dire due to prevailing drought conditions.

Livestock farmers in these areas, who rely on livestock farming for their livelihoods, are facing challenges due to poor and inadequate pasture.

The Ministry of Agriculture, Water, and Land Reform notes that under normal circumstances, food security, especially in communal crop-producing regions, improves between February and March with the availability of seasonal green produce.

However, erratic rainfall patterns are expected to result in low yields for these crops as well. The Zambezi region is particularly affected by an outbreak of African Migratory Red Locusts, causing severe damage to maize crops.

Other pests recorded include false armyworms, armoured bush crickets, quelea birds, and cutworms, albeit with minimal crop damage.

Recent research has underscored Namibia's vulnerability to drought, ranking it among the top 10 countries with a drought risk score of 4.44, according to the latest Global Weather Report, with Somalia topping the list at 5.00.

The best just got better.

PUBLIC NOTICE

Please take note that Kamau Town Planning and Development Specialist has been appointed by the owner of Erf 1503, Khomasdal, Extension 14, Windhoek, to apply to the City of Windhoek and the Urban and Regional Planning Board for the:

1. Rezoning of erf 1503 khomasdal, extension 14, windhoek from "undetermined" to "single residential" with a density of 1:300
2. Subdivision of erf 1503 khomasdal, extension 14, windhoek, into 13 portions and the remainder of erf 1503 (street)

in terms of the City of Windhoek Town Planning Scheme and Part 2, Section 105 of the Urban and Regional Planning Act 5 of 2018.

Erf 1503 is located along Gladida Street, Khomasdal Extension 14, and measures approximately 5 148sqm in extent. The erf is currently zoned 'Undetermined'.

In order to maximize the development potential of the property, the owner of Erf 1503 would like to rezone Erf 1503 Khomasdal, Extension 14, Windhoek from "Undetermined" to "Residential" with a density of 1:300, and subdivide the property into 13 portions and the Remainder of 1503 (Street).

PLEASE FURTHER TAKE NOTE THAT -

(a) For more enquiries regarding the rezoning and subdivision application, visit the City of Windhoek's Department of Planning office number 813.

(b) Any person having objections to the rezoning concerned or who wants to comment, may in writing lodge such objections and comments, together with the grounds, with the Chief Executive Officer of the City of Windhoek, and with the applicant within 14 days of the last publication of this notice, i.e. no later than **13 May 2024**.
