1 INTRODUCTION

1.1 Project Background

Margreth Scholastica Utete De Jesus (hereinafter referred to as the Proponent) has applied to the Ministry of Mines and Energy (MME) for the Exclusive Prospecting Licence (EPL) No. 8492 on 17th November 2020. However, the approval and granting of the EPL requires an Environmental Clearance Certificate (ECC), before any proposed prospecting and exploration works commence.

EPL 8492 is located within Okongwe Settlement (**Figure 1**) and covers an area of 12 983.9011 ha in size. The EPL falls within the Otjihorongo reserve (**Figure 2**).

The target commodities for prospecting and exploration are Base and Rare Metals, Dimension stones, Industrial Minerals, and Precious Metals.

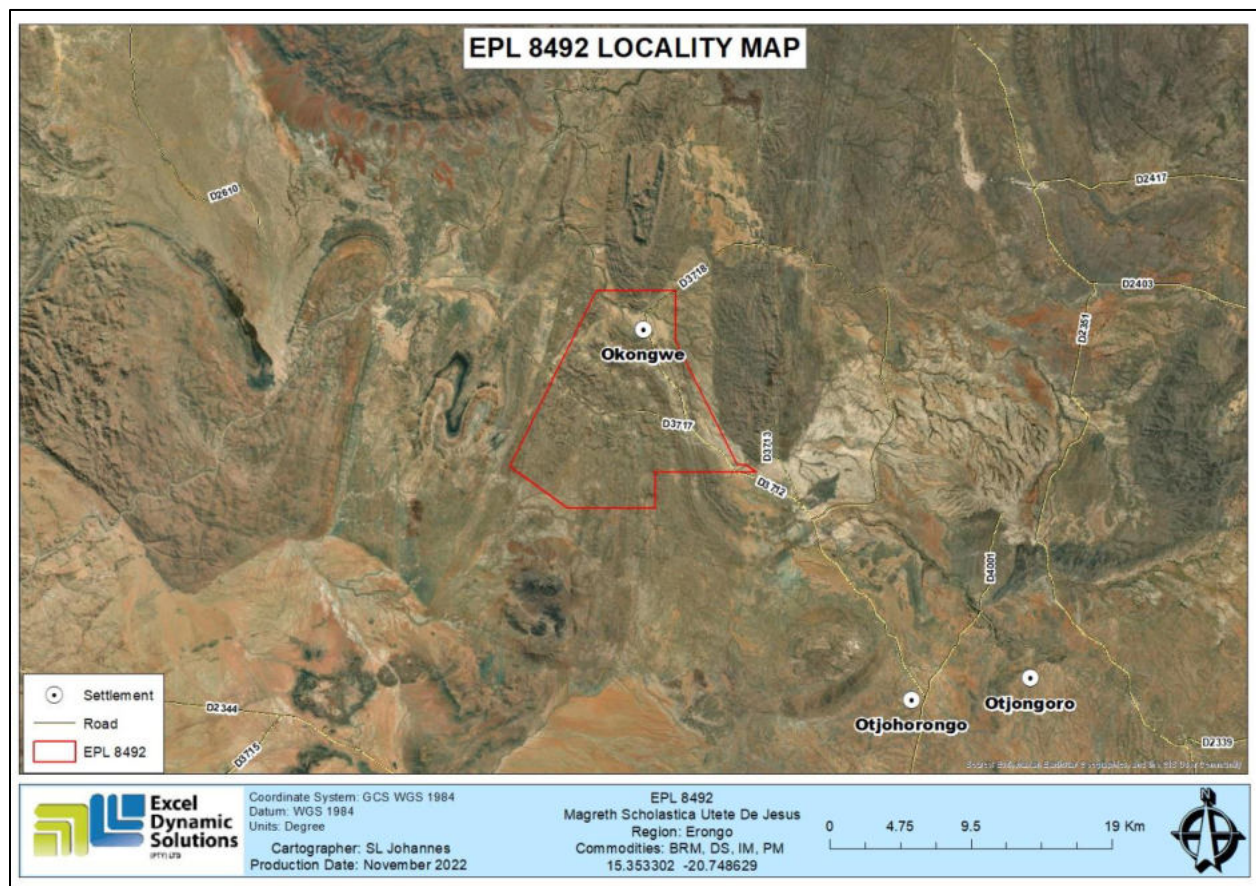

Figure 1: Locality for EPL No. 8492

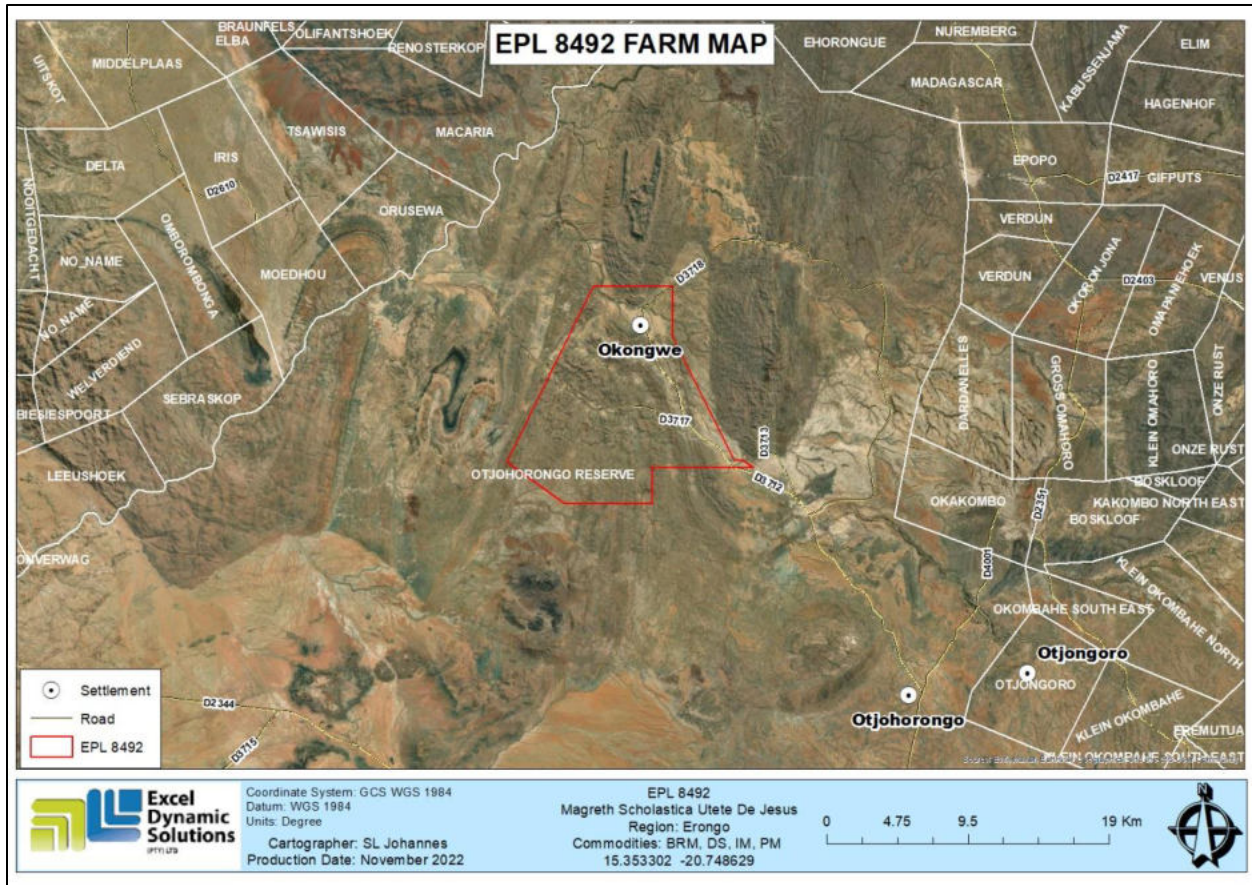

Figure 2: Land use (affected and neighboring farms) for EPL No.8492.

According to Section 27 (1) of the Environmental Management Act (EMA), No. 7 of 2007, and in line with Sections 32-37 of the EMA as gazetted in 2012, the proposed prospecting and exploration activities on EPL 8492 form part of the listed activities that may not be conducted without an EIA undertaken. The relevant listed activities as per EIA regulations are:

- 3.1 The construction of facilities for any process or activities which requires a license, the right of other forms of authorization, and the renewal of a license, right or other forms of authorization, in terms of the Minerals (Prospecting and Mining Act, 1992).
- 3.2 Other forms of mining or extraction of any natural resources whether regulated by law or not.
- 3.3 Resource extraction, manipulation, conservation, and related activities.

This statutory document has been prepared as per requirement in accordance with Section 8 of the EMA (No. 7 of 2007). The compilation of this EMP is one of the requirements (scope of work)

presented to Excel Dynamic Solutions (Pty) Ltd by The Proponent. It is required of the Environmental Consultant to comply with the EMA and provide for the following:

- Prepare an explicit Environmental Management Plan to be used as a guideline to monitor compliance with the recommendations stipulated in the EIA and to assist in managing and monitoring activities throughout the exploration and maintenance of the proposed exploration activities and sites on the EPL.
- The Environmental Consultant must elucidate in the EMP the roles and responsibilities of the Proponent, the contractors, and any other identified stakeholders.

1.2 Aim of the Draft Environmental Management (EMP)

Regulation 8(j) of the EIA Regulations (2012) requires that a draft Environmental Management Plan (EMP) shall be included as part of the Environmental Assessment (EA). A '**Management Plan**' is defined as:

"...a plan that describes how activities that may have significant environments effects on the environment are to be mitigated, controlled and monitored."

An EMP is one of the most important outputs of the EA process. It synthesizes all the proposed management & mitigation and monitoring actions, set to a timeline and with specific assigned responsibilities. It provides a link between the impacts identified in the EA process and the required mitigation measures to be implemented during exploration. It is important to note that an EMP is a statutory document and a person who contravenes the provisions of this EMP may face imprisonment and/or a fine. This EMP is a living document and can be amended to adapt to addressing project changes and/or environmental conditions and feedback from compliance monitoring.

The purpose of this document is, therefore, to guide environmental management throughout the different phases of the proposed exploration activities, namely: planning, prospecting & exploration, and decommissioning & rehabilitation phase:

- **Planning phase** - This is the stage of the proposed project during which the Proponent prepares all the administrative and technical requirements needed for the actual works on the ground. Planning includes things like obtaining the necessary permitting and authorization from relevant national and local stakeholders (such as affected parties),

facilitating the recruitment and procurement processes, etc., in preparation for the exploration activities (and site maintenance).

- **Prospecting and Exploration phase** - This is the phase where the Proponent will do prospecting and exploration activities for the targeted commodities groups and undertake related activities on site. It is also the phase during which maintenance of the area, equipment, and machinery is done by the Proponent.
- **Decommissioning and Rehabilitation** – This is the phase during which the exploration activities on the EPL cease. The decommissioning of the EPL exploration activities may be considered because of poor results or declining in the focus commodity market price. Before the decommissioning phase, The Proponent will need to put site rehabilitation measures in place.

Environmental Monitoring Requirements: To support and ensure that the proposed mitigation measures are achieving the desired results, a monitoring plan must be implemented alongside the mitigation plan.

This draft EMP will be used by the Proponent, employees, and/or contractors to provide management measures to be undertaken during mining activities, to address the environmental impacts identified in the scoping report, and ensure that the impacts on the environment are avoided or limited if they cannot be avoided completely.

1.3 Appointed Environmental Assessment Practitioner

To fulfill the requirements of the EMA and its 2012 EIA Regulations, the Proponent appointed Excel Dynamic Solutions (Pty) Ltd (EDS), an independent consultant, to conduct the required EA process on their (Proponent's) behalf. This EMP is submitted as part of an application for the proposed exploration method on the EPL to the Environmental Commissioner at the Department of Environmental Affairs and Forestry (DEAF), at the Ministry of Environment, Forestry and Tourism (MEFT).

1.4 Environmental Assessment Legal Requirements

The content of the EMP must meet the requirements of Section 8 (j) of the EIA Regulations. The EMP must address the potential environmental impacts of the prospecting and exploration activities on the environment throughout the project life cycle. It must also include a system for assessment of the effectiveness of monitoring and management arrangements after project implementation.

The Proponent, therefore, has the responsibility to ensure that the exploration activities, as well as the EA process, conform to the principles of the EMA, and must ensure that employees act in accordance with such principles. **Table 1** below outlines the requirements of an EMP as stipulated by Section 8(e) of the EIA Regulations, primarily on specific approvals and permits that may be required for the activities required of the EPL.

Table 1: Applicable legal requirements and permits to the activities of the EPL 8492

Legislation/Policy/ Guideline	Relevant Provisions	Implications for this project
Environmental Management Act EMA (No 7 of 2007)	Requires that projects with significant environmental impacts are subject to an environmental assessment process (Section 27). Details principles that are to guide all EIAs.	The EMA and its regulations should inform and guide this EA process. Should the ECC be issued to the Proponent, it should be renewed every 3 years, counting from the date of issue.
Environmental Impact Assessment (EIA) Regulations GN 28-30 (GG 4878)	Details requirements for public consultation within a given environmental assessment process (GN 30 S21). Details the requirements for what should be included in a Scoping Report (GN 30 S8) and an Assessment Report (GN 30 S15).	Office of the Environmental Commissioner Tel: +264 61 284 2701
Minerals (Prospecting and Mining) Act (No. 33 of 1992)	Section 48 (3): To enable the Minister to consider any application referred to in section 47 the Minister may (b) require the person concerned by notice in writing to (i) carry out or cause to be carried out such environmental impact studies as may be specified in the notice. Section 54(2): details provisions of the decommissioning or abandonment of a mine.	The Proponent should ensure that all necessary permits/authorization for these EPL are obtained from the Ministry of Mines and Energy (MME). Mining Commissioner Tel: +264 61 284 8086

Legislation/Policy/ Guideline	Relevant Provisions	Implications for this project
	Under this Act (Section 51 (1a)), the holder of a mineral license cannot exercise any rights on private land until the holder has entered into an agreement with the owner regarding the payment of compensation	The Proponent should timely enter into and sign an access and land use agreement (consent) with the respective affected farm owners.
Petroleum Products and Energy Act (No. 13 of 1990) Regulations (2001)	Regulation 3(2)(b) states that “No person shall possess or store any fuel except under the authority of a license or a certificate, excluding a person who possesses or stores such fuel in a quantity of 600 litres or less in any container kept at a place outside a local authority area”	The Proponent should obtain the necessary authorisation from the MME for the storage of fuel on-site. Ministry of Mines and Energy: Director – Petroleum Affairs Tel: +264 61 284 8291
Forestry Act 12 of 2001, Amended Act 13 of 2005	Prohibits the removal of any vegetation within 100 m from a watercourse (Forestry Act S22 (1)). The Act prohibits the removal of and transport of various protected plant species.	Should there be protected plant species, which are known to occur within the project site, these are required to be removed and a permit should be obtained from the nearest Forestry office (Ministry of Environment, Forestry and Tourism (MEFT)) before removing them. Director of Forestry Division Tel: +264 61 208 7320
National Heritage Act No. 76 of 1969	Call for the protection and conservation of heritage resources and artefacts.	Should there be any archaeological material, such as bones, old weapons/equipment, etc. found on the EPL site, work should stop immediately, and the National Heritage Council of Namibia must be informed as soon as possible. The Heritage Council will then decide to clear the area or decide to conserve the site or material. Contact Details at National Heritage Council of Namibia

Legislation/Policy/ Guideline	Relevant Provisions	Implications for this project
		<p>Regional Heritage Officer – National Heritage Council of Namibia</p> <p>Tel: (06) 301 903</p>

1.5 Draft EMP Limitations

This EMP has been drafted with the acknowledgment of the following limitations:

- This EMP has been drafted based on the Environmental Assessment (EA) conducted for targeted prospecting and exploration activities for Base and Rare Metals, Dimension stones, Industrial Minerals, and Precious Metals on EPL 8492.
- The mitigation measures recommended in this EMP document are based on the risks/impacts in the ESA Report which were identified based on the project description as provided by the Proponent, site investigation, and public input. Should the scope of the proposed project change, the risks/impacts will have to be reassessed and mitigation measures provided accordingly.

2 EMP ROLES AND RESPONSIBILITIES

The Proponent is ultimately responsible for the implementation of the EMP. However, the Proponent may delegate this responsibility at any time, as they deem necessary during the project phases. The roles and responsibilities of all delegates/parties involved in the effective implementation of this EMP are set out below:

2.1 Competent Monitoring Authority: Department of Environmental Affairs and Forestry (DEAF, MEFT)

The DEAF is responsible for enforcing compliance with the EMA, its regulations, and the full implementation of this EMP. The competent authority also reviews biannual reports and grants ECC renewal after 3 years.

2.2 The Proponent or Proponent's Representative (PR)

If the Proponent does not personally manage all aspects and phases' activities referred to in this EMP, they should assign this responsibility to a suitably qualified individual referred to in this plan as the Proponent's Representative (PR). The PR may be appointed to manage all phases of the project or to manage only the EMP aspects of the project. The PR's responsibilities may include:

- Managing the implementation of this EMP and updating and maintaining it when necessary.
- Managing and monitoring of individuals and/ or equipment on-site in terms of compliance with this EMP.
- Issuing fines for contravening EMP provisions.

2.3 Exploration Manager (as appropriate)

This individual will be responsible to ensure that the exploration activities of the project are completed on time. The Manager's duties and responsibilities will include:

- Ensure that relevant commitments contained in the EMP Action Plans are adhered to.
- Ensure relevant staff is trained in procedures entailed in their duties.
- Maintain records of all relevant environmental documentation for the project.
- Reviewing the EMP annually and amending the document when necessary.
- Issuing fines to individuals who may be in breach of the EMP provision and if necessary, removing such individuals from the site.

- Cooperate with all relevant interested and affected parties/stakeholders.
- Development and management of schedules for daily activities.

2.4 Environmental Control Officer (ECO)

The Proponent may assign the responsibility of ensuring EMP compliance throughout the project life cycle to a designated member of staff or an external qualified and experienced person, referred to in this EMP as the Environmental Control Officer (ECO). The ECO will have the following responsibilities:

- Management and facilitation of communication between the Proponent, PR, and Interested and Affected Parties (I&APs) regarding this EMP.
- Conducting site inspections (recommended frequency is monthly or weekly as recommended – please refer to Table 3) of all areas with respect to the implementation of this EMP (monitor and audit the implementation of the EMP).
- Advising the PR on the removal of person(s) and/or equipment not complying with the provisions of this EMP.
- Making recommendations to the PR with respect to the issuing of fines for contraventions of the EMP.
- Undertaking an annual review of the EMP and recommending additions and/or changes to this document.
- Ensuring that the exploration activities on site are conducted in accordance with the International System Organization (ISO) standard 14001: 2015.

Archaeology: Chance Finds Procedure (CFP) Implementation Roles

The following personnel has been assigned responsibilities as per the Chance Finds procedure (Appendix 1):

- **Operator:** To exercise due caution if archaeological remains are found.
- **Foreman:** To secure the site and advise management timeously.
- **Superintendent:** To determine safe working boundaries and request inspection.
- **Archaeologist:** To inspect, identify, advise management, and recover remains.

The Proponent should assess these commitments in detail and should acknowledge their obligation to the specific management actions detailed in the Tables under the following sections.

3 ENVIRONMENTAL MANAGEMENT & MITIGATION MEASURES

3.1 Management of Key Potential Adverse Environmental Impacts

From the assessment conducted, the following key potential negative impacts have been identified and are summarized below.

- Potential disturbance of grazing land areas,
- Physical land/soil disturbance
- Impact on local biodiversity (fauna and flora) and habitat disturbance and potential illegal wildlife hunting (poaching) in the area.
- Potential impact on water resources and soils particularly due to pollution,
- Air quality issue: potential dust generated from the project.
- Potential occupational health and safety risks
- Vehicular traffic safety and impact on services infrastructure such as local roads
- Vibrations and noise associated with drilling activities may be a nuisance to locals
- Environmental pollution (solid waste and wastewater)
- Archaeological and heritage resources impact
- Potential social nuisance and conflicts (theft, damage to properties, etc.).

3.2 Aim of the Environmental Management Action Plan

The management actions of the EMP aims to avoid the potential negative impacts, where possible. Where impacts cannot be avoided, measures are provided to reduce the significance of these impacts.

Management actions recommended for the potential impacts rated in the ESA carried out for the prospecting and exploration activities were based on the following project stages (phases):

- Planning, Prospecting, and Exploration (and site maintenance) phases (**Table 2**)
- Monitoring (**Table 3**)
- Decommissioning and Rehabilitation (**Section 3.5**).

The responsible person(s) should assess these actions in detail and acknowledge their commitment to the specific management actions detailed in the phases given under the following subsections.

3.3 Exploration Activities Mitigation Plan

The management action plan recommended for these exploration phases is presented in **Table 2** below.

Table 2: Management and mitigation action plans for the planning and exploration phases

Aspect	Impact	Management and Mitigation Measure(s)	Key Performance Indicator (KPI)	Implementation Responsibility	Resources	Timeline
PLANNING PHASE						
EMP implementation and training	Lack of EMP awareness and implications thereof	<p>-A Comprehensive Health and Safety Plan for the project activities should be compiled. This will include all the necessary health, safety, and environmental considerations applicable to respective works on sites.</p> <p>An EMP non-compliance penalty system should be implemented on-site.</p> <p>The Proponent should appoint an ECO to be responsible for managing the EMP implementation and monitoring.</p>	<p>-All required Plans and systems are compiled and in place.</p> <p>and Environmental Control Officer (ECO) is appointed</p>	Proponent	EMP implementation Plans and Systems	Pre-exploration works
Authorizations	Lack of Agreements, Permits/ Licenses	<p>-All the required agreements and licenses or permits should be applied for and signed, respectively before the commencement of work on the EPL, or as required.</p> <p>-The permits and agreements referred to herein include:</p>	<p>-Applicable permits and licenses to be obtained from relevant authorities and kept on site for record keeping and future inspections.</p> <p>-Agreements/permits signed and obtained on time, min. 2 months</p>	Proponent	<p>Proponent</p> <p>Respective authorities and services provider(s)</p>	Before exploration works

Aspect	Impact	Management and Mitigation Measure(s)	Key Performance Indicator (KPI)	Implementation Responsibility	Resources	Timeline
		<ul style="list-style-type: none"> -Land access by the farm owners (landowners). -Waste management disposal permits from the relevant facility operator/owner -Water supply agreements. -Onsite fuel storage permit from MME for any petroleum stored onsite. 	<p>before planned commencement date of works.</p>			
Communication between the Proponent and other neighbouring land users and custodians	Lack of communication (proper liaison) between other land users and Proponent with regard to land use	<ul style="list-style-type: none"> -The Proponent should appoint a Public Relation Officer (PRO) to liaise with the land users. -A clear communication procedure/plan which should include a grievance mechanism. 	<p>A PRO is appointed</p> <ul style="list-style-type: none"> -Ongoing Community Engagement & Consultation throughout the project cycles, when and as required. <p>PRO contact details to be provided to the affected landowners</p>	Proponent	<p>PRO</p> <p>Complaint's logbook</p>	<p>PRO appointment (Prior to project activities) and their responsibilities throughout the project activities</p>
Employment	Creation of employment opportunities	-Non-skilled labour should be sourced from the locally affected area (people from the local communities), in accordance with	-Number of locals employed for exploration activities	Proponent in collaboration with the Exploration Manager (if necessary)	Record of employees	Pre-project activities and when necessary, throughout

Aspect	Impact	Management and Mitigation Measure(s)	Key Performance Indicator (KPI)	Implementation Responsibility	Resources	Timeline
		<p>procedures approved by the relevant authorities.</p> <p>-Preference of local people for employment for jobs should be implemented, i.e., permanent residents from the farms surrounding areas should be employed for the unskilled labour preferentially to out-of-area people (outsiders) where possible. Out-of-area employment should be justified, for example by the unavailability of local skills only.</p> <p>-Equal opportunity should be provided for both men and women, when and where possible.</p>				
Specialised procurement of services	Contractors and services	-All services related to exploration activities such as trenching/pitting and drilling that the Proponent may need, preference should be given to local providers of such services. If not available locally, the services search should be extended to a regional level (Erongo Region), nationally, and lastly, internationally.	The number of hired contractors.	Proponent Exploration Manager	Record of hired or contracted companies or services providers	Pre-project activities and when necessary, throughout
PROSPECTING AND EXPLORATION PHASE						

Aspect	Impact	Management and Mitigation Measure(s)	Key Performance Indicator (KPI)	Implementation Responsibility	Resources	Timeline
EMP implementation and training	Lack of EMP awareness and implications thereof	<p>-EMP pieces of training should be provided to all new workers on site.</p> <p>-All site personnel should be aware of necessary health, safety, and environmental considerations applicable to their respective work.</p> <p>-The implementation of this EMP should be monitored.</p> <p>The site should be inspected, and a compliance audit is done throughout <u>the project activities, monthly.</u></p> <p>An EMP non-compliance penalty system should be implemented on-site.</p>	Compliance monitoring is conducted bi-annually and should be recorded.	ECO	<p>Bi-annual reports</p> <p>Records of EMP training conducted.</p>	Throughout the exploration phase and as required
Communication between the Proponent and other neighbouring land users and custodians	Lack of communication (proper liaison) between community members and Proponent with regard to land use	<p>-The PRO should be introduced to the farm owners and his or her contact details provided to them prior to undertaking activities for easy communication during exploration activities.</p> <p>The Proponent should compile a clear communication procedure/plan which should include a grievance and response mechanism.</p>	<p>-PRO is part of the project personnel.</p> <p>-Ongoing community members' engagement & consultation throughout the project cycles, when and as required</p> <p>- Community/community members' grievances</p>	PRO	<p>Complaint's logbook</p> <p>PRO contact details are to be provided to the affected land users.</p> <p>Records of community members' consultation</p>	Throughout the exploration activities

Aspect	Impact	Management and Mitigation Measure(s)	Key Performance Indicator (KPI)	Implementation Responsibility	Resources	Timeline
			addressed to their satisfaction		Land access agreement conditions	
Grazing land	Loss of grazing areas	<p>-Any unnecessary removal or destruction of grazing land, due to exploration activities should be avoided.</p> <p>-Vegetation found on the site, but not in the targeted exploration areas should not be removed but left to preserve biodiversity and grazing land.</p> <p>-Workers should refrain from driving off-road and creating unnecessary tracks that may contribute to the loss of grazing land.</p> <p>-Environmental awareness on the importance of the preservation of grazing land for local livestock should be provided to the workers.</p>	<p>-Limited cleared sites</p> <p>-Fewer access tracks</p> <p>-No complaints from community members regarding significant land/vegetation clearing</p>	<p>Proponent / Exploration Manager</p> <p>ECO</p>	Grievance logbook	Throughout the phases
Water Resources	Over-abstraction (water demand and availability)	<p>-Given the high rainfall in the area, drilling near rivers, streams, and river beds (within 50m) should be avoided during heavy rainy days. This is to prevent easy wash off of potential pollutants at the drilling site surface into these surface water bodies via runoff and eventually Groundwater.</p>	<p>-Water supply agreements</p> <p>-Proof/ recording/ quantification of water-saving efforts.</p>	Proponent	<p>Water supplier</p> <p>Water supplying agreements</p>	Once off supply agreement

Aspect	Impact	Management and Mitigation Measure(s)	Key Performance Indicator (KPI)	Implementation Responsibility	Resources	Timeline
		<p>-Fuel and other hazardous substances should be stored and contained in properly sealed containers placed on or installed over a plastic liner or any impervious layer on the surface to prevent accidental spills and leakage from reaching the soils and water resources.</p> <p>-The drilling mud and associated additives should not be mixed with non-biodegradable or chemicals that may be harmful to groundwater resources.</p> <p>-Wastewater and used hydrocarbons (fuels, oil, and grease) must be properly secured and disposed of at the nearest approved wastewater treatment and hazardous waste management facility, respectively.</p> <p>-Hydrocarbon spill management and emergency procedures must be implemented onsite and personnel trained on how to effectively clean up spills.</p> <p>-Fuel and oil spill kits should be made available on-site and training thereof.</p> <p>-The project personnel and visitors alike should be provided with</p>		<p>Exploration Manager</p>	<p>Proponent</p> <p>Water storage tanks on site</p>	<p>Throughout the exploration phase</p>

Aspect	Impact	Management and Mitigation Measure(s)	Key Performance Indicator (KPI)	Implementation Responsibility	Resources	Timeline
		<p>portable toilets to ensure that no one practices open defecation on site leading to the migration of human waste into surface water and eventually groundwater.</p> <p>-If effluent or wastewater will be discharged into the environment by the Proponent, a Discharge permit should be applied for and obtained from the Water Environment/ Law Administration Division of the Ministry of Agriculture, Water and Land Reform (MAWLR).</p> <p>-Water Resources protection against pollution must be incorporated into personnel's induction and awareness made to endure accountability among project personnel while onsite.</p> <p>-A Groundwater Abstraction & Use Permit should be applied for and obtained from the Water Law Administration Division of the Ministry of Agriculture, Water and Land Reform (MAWLR).</p> <p>-In case of drilling of new boreholes for the project, a drilling permit should be obtained from MAWLR' Geohydrology Division.</p>				

Aspect	Impact	Management and Mitigation Measure(s)	Key Performance Indicator (KPI)	Implementation Responsibility	Resources	Timeline
		<p>-The recycling and re-use of water should be encouraged and practiced onsite, where possible.</p> <p>-Groundwater use, management, and conservation should be encouraged onsite to ensure accountability.</p>				
Soils	Physical soil/land disturbance and loss of topsoil	<p>-Overburden soils and rocks should be handled more efficiently during operations to avoid erosion when subjected to erosional processes.</p> <p>-Stockpiled topsoil and drill materials should be used to backfill the excavated and disturbed site areas/spots.</p> <p>-Soils that are not within the intended and targeted footprints of the site should be left undisturbed and soil conservation implemented as far as possible.</p> <p>-Project vehicles and machinery should stick to access roads provide and or meant for the project operations but not unnecessarily create further tracks on site by driving everywhere resulting in soil compaction.</p> <p>-The disturbance of the soil surface in the vicinity of the</p>	<p>-No proliferation of informal vehicle tracks.</p> <p>-No new erosion gullies.</p>	ECO	<p>Proponent</p> <p>All personnel</p> <p>Complaint's logbook</p>	Throughout the exploration phase

Aspect	Impact	Management and Mitigation Measure(s)	Key Performance Indicator (KPI)	Implementation Responsibility	Resources	Timeline
		<p>working sites must be minimised to prevent wind erosion. The footprint of the EPL site area must be kept small as much as possible and existing access roads are to be always utilised to avoid off-road tracks.</p> <p>-The project footprint area should not be cleared entirely, and the exploration vehicles and equipment must be placed in such a way that soil disturbance is minimised, and the site should be rehabilitated after each onsite work.</p>				
Soils and water resources	Soils and water resources pollution	<p>-Oil and wastewater spill control preventive measures should be in place on-site to manage soil contamination, thus preventing and minimizing the contamination from reaching water resources bodies. Some of the soil control preventive measures that can be implemented include:</p> <p>-Spill control preventive measures should be in place on-site to manage soil contamination, thus preventing and or minimizing the contamination from reaching water bodies.</p>	<p>No complaints of pollutants on the soils and eventually in the water due to exploration activities</p> <p>No visible oil spills on the ground or pollution spots.</p>	ECO	<p>Complaint's logbook</p> <p>Waste containers</p> <p>Non-permeable material to cover the ground surface at areas where hydrocarbons and potential pollutants are utilized.</p>	Throughout exploration phase

Aspect	Impact	Management and Mitigation Measure(s)	Key Performance Indicator (KPI)	Implementation Responsibility	Resources	Timeline
		<p>-All project employees should be sensitized about the impacts of soil pollution and advised to follow appropriate fuel delivery and handling procedures.</p> <p>-The Proponent should develop and prepare countermeasures to contain, clean up, and mitigate the effects of an oil spill. This includes keeping spill response procedures and a well-stocked cache of supplies easily accessible.</p> <p>-Ensure employees receive basic Spill Prevention, Control, and Countermeasure (SPCC) Plan training and mentor new workers as they get hired.</p> <p>-Project machines and equipment should be equipped with drip trays to contain possible oil spills when operated on-site.</p> <p>-Polluted soil should be removed immediately and put in a designated waste-type container for later disposal.</p> <p>-Drip trays must be readily available on this trailer and monitored to ensure that accidental fuel spills along the tank trailer path/route around the exploration sites are cleaned on</p>				

Aspect	Impact	Management and Mitigation Measure(s)	Key Performance Indicator (KPI)	Implementation Responsibility	Resources	Timeline
		<p>time (soon after the spill has happened).</p> <p>-Polluted soil must be collected and transported away from the site to an approved and appropriately classified hazardous waste treatment facility.</p> <p>-Washing of equipment contaminated hydrocarbons, as well as the washing and servicing of vehicles should take place at a dedicated area, where contaminants are prevented from contaminating soil or water resources.</p> <p>-Toilet water should be treated using the long drop toilet system and periodically emptied before reaching capacity and transported to a wastewater treatment facility.</p>				
Biodiversity	Loss of Fauna and Flora	<p>Fauna:</p> <p>-The poaching (illegal hunting) of wildlife on the farms and surrounding areas is strictly prohibited.</p> <p>-The project workers should refrain from killing or snaring the farm livestock that may be found on and around the site.</p>	<p>No disturbance to unmarked areas.</p> <p>No complaints from locals regarding unauthorised vegetation removal or cutting down of trees.</p>	ECO	<p>Barricading tape (to indicate working areas)</p> <p>Complaint logbook</p>	Throughout the exploration phase

Aspect	Impact	Management and Mitigation Measure(s)	Key Performance Indicator (KPI)	Implementation Responsibility	Resources	Timeline
		<p>-Workers should refrain from disturbing and poaching animal species found within the EPL and surrounding areas.</p> <p>-Access roads (even existing ones) should be utilized appropriately in a manner that disturbs as minimal land areas as possible, thus minimizing faunal habitat destruction.</p> <p>-Breeding sites for faunal species that are found within the site and nearby should not be disturbed.</p> <p>-Environmental awareness of the importance of faunal preservation should be provided to the workers and contractors.</p> <p>Flora:</p> <p>-The Proponent should avoid unnecessary removal of vegetation, thus promoting a balance between biodiversity and their exploration works.</p> <p>-Vegetation found on the site, but not in the targeted exploration areas should not be removed but left to preserve biodiversity on the site.</p> <p>-Movement of vehicles and machinery should be restricted to</p>	<p>No complaints of wildlife hunting by the project personnel.</p> <p>No intentional disturbance or destruction of site vegetation and faunal species</p> <p>Visible preservation of onsite vegetation</p>			

Aspect	Impact	Management and Mitigation Measure(s)	Key Performance Indicator (KPI)	Implementation Responsibility	Resources	Timeline
		<p>existing roads and tracks to prevent unnecessary damage to the vegetation.</p> <p>-Design access roads appropriately in a manner that disturbs minimal land areas as possible.</p> <p>-Make use of the existing road network as much as possible and avoid off-road driving, thus minimizing onsite floral destruction.</p> <p>-Vegetation clearing to be kept to a minimum. The vegetation of the site is largely low and open and therefore wholesale vegetation clearing should only be applied where necessary and within the EPL footprint.</p> <p>-Vegetation found on the site, but not in the targeted areas should not be removed but left to preserve biodiversity on the site.</p> <p>-Environmental awareness of the importance of floral biodiversity preservation should be provided to the workers and contractors.</p>				
Illegal hunting	Illegal hunting of wildlife	-No wildlife hunting is permitted.	Incident reports of illegal hunting of wildlife by the crew.	ECO	Complaint's logbook	During site setup, and throughout the

Aspect	Impact	Management and Mitigation Measure(s)	Key Performance Indicator (KPI)	Implementation Responsibility	Resources	Timeline
		-Site personnel should refrain from killing/poaching or intentionally disturbing wildlife, or any faunal species found on-site and around the EPL site.			Anti-poaching Police Unit	exploration phase
Land Use	The conflict between land uses and exploration activities	<p>-Exploration activities should not in any way hinder the existing land uses within the EPL but rather promote co-existence throughout the project operations while respecting other land users.</p> <p>-The project workers and vehicles should be limited to the actual EPL active sites only but not unnecessarily wander and drive around other land uses sites, respectively.</p> <p>-The Proponent should ensure that their activities comply with the conditions set by the competent, regulatory, and affected authorities such that the proposed exploration activities do not severely impact the different existing activities around the EPL.</p>	<p>Land access and use permits/authorizations.</p> <p>Compliance with conditions set within operational permits by relevant and affected authorities.</p> <p>Little to no complaints of significant interference from the neighbouring land users</p>	<p>PRO</p> <p>Proponent</p> <p>ECO</p>	<p>Proponent</p> <p>Relevant authorities (MEFT, MME, etc.)</p>	Throughout the exploration phase
Road use and safety	Increase in vehicular traffic flow	-Vehicles should be driven only on existing access roads and necessary temporary access roads only leading to EPL mapped	No complaints from members of the public regarding vehicular traffic issues related to the project activities.	<p>Proponent</p> <p>ECO</p>	<p>Number of project vehicles on site</p> <p>Names of drivers</p>	Throughout exploration phase

Aspect	Impact	Management and Mitigation Measure(s)	Key Performance Indicator (KPI)	Implementation Responsibility	Resources	Timeline
		<p>sites; no new roads should be constructed where possible.</p> <p>-The transportation of project materials, equipment, and machinery should be limited to once or twice a week only, but not every day.</p> <p>-The heavy truck loads should comply with the maximum allowed limit while transporting materials and equipment/machinery on public and access roads.</p> <p>-The carted water into the area from outside the project area should be done once or twice a week in a container that can supply and store water for most of the week, thus reducing the number of trucks on the road.</p> <p>-Drivers of all project phases' vehicles should own a valid and appropriate driving licenses.</p> <p>Vehicle drivers should adhere to the road safety rules.</p> <p>-Drivers should drive slowly (40km/hour or less), and be on the lookout for wildlife and people.</p> <p>-Project vehicles should be in a roadworthy condition and serviced regularly to avoid accidents</p>	<p>All personnel operating the project vehicles and machinery are appropriately licensed and in possession of valid driving licenses.</p> <p>Demarcated areas for parking, offloading, and loading zones are on site.</p> <p>If required, site access road permits are obtained, and requirements are fulfilled.</p> <p>No creation of unnecessary tracks on site.</p>		<p>Frequency of water carting</p>	<p>Site access permit (s) to be applied for and obtained prior to commencement of exploration works</p>

Aspect	Impact	Management and Mitigation Measure(s)	Key Performance Indicator (KPI)	Implementation Responsibility	Resources	Timeline
		because of mechanical faults of vehicles.				
Local roads	Overuse and maintenance	<p>-The heavy trucks transporting materials and services to the site should be scheduled to travel at least twice or thrice a week to avoid daily travelling to the site, unless in cases of emergencies.</p> <p>-The Proponent should consider frequent maintenance of local roads on the farms to ensure that the roads are in a good condition for other road users such as community members, and travellers from and outside the area.</p>	-Visible efforts of maintaining access and community roads by the Proponent	Proponent	Road clearing machinery (bulldozers)	Throughout the exploration phase, when necessary
Occupational Health and safety	General health and safety associated with project activities in both phases	<p>-The Proponent should commit to and make provision for bi-annual full medical check-ups for all the workers at the site to monitor the impact of project-related activities on them (workers).</p> <p>-As part of their induction, the project workers should be provided with awareness training on the risks of mishandling equipment and materials on-site as well as health and safety risk associated with their respective jobs.</p>	Comprehensive health and safety plan for all exploration activities is compiled.	Proponent Exploration Manager ECO	Occupational Health and Safety Personnel Health and Safety Training First aid kits Trained worker to administer first aid	Throughout the exploration phase and training is offered as and when required

		<p>owners the affected community members or neighbouring farms is strictly prohibited.</p> <p>-Out-of-area workers that may be employed (due to their unique work skills) on-site should be sensitized on the importance of respecting the local values and norms.</p>				
PROGRESSIVE REHABILITATION AND DECOMMISSIONING PHASE						
Rehabilitation	Disturbance and damage to land	<p>-All drilled boreholes and excavated pits related to the project activities must be capped and backfilled, respectively.</p> <p>-All waste generated and stored on-site during exploration activities must be disposed of at the respective nearest solid waste management sites.</p> <p>-The stockpiled topsoil should be levelled soon after the completion of works at the sites.</p> <p>-Any temporary setup on site must be dismantled, and the area rehabilitated as far as practicable, to its original state.</p> <p>-Explored areas on worksites must be progressively rehabilitated by stockpiling and backfilling.</p>	<p>Capped boreholes and backfilled pits</p> <p>No sign of waste or littering was seen on-site and around site areas.</p> <p>Carrying away waste, and removal of vehicles and equipment from the site.</p> <p>No stockpiled topsoil (topsoil is levelled after completion of each work).</p>	Proponent	<p>Excavators and other backfilling/demolishing machinery</p> <p>Record of pits excavated, and boreholes drilled (if any)</p> <p>Waste containers on sites</p> <p>Photo records of backfilled sites</p> <p>Records of finances set aside for</p>	<p>Progressive rehabilitation is done throughout the exploration phase and completely decommission and rehabilitation are done after the completion of exploration works.</p>

Aspect	Impact	Management and Mitigation Measure(s)	Key Performance Indicator (KPI)	Implementation Responsibility	Resources	Timeline
		-Provision of financial and technical resources for progressive rehabilitation must be made by the Proponent.	The campsite is dismantled and materials are taken away from the site. Visible signs of stockpiled topsoil		decommissioning activities	

3.4 Monitoring Action Plans (Monitoring Plan)

To support and ensure that the proposed mitigation measures are achieving the desired results, a monitoring plan must be implemented. The monitoring action plans recommended for planned exploration works are presented in **Table 3** below.

Table 3: Management action plans for Monitoring

Environmental Feature	Impact	Monitoring Actions	Implementation responsibility	Frequent	Threshold	Action if a threshold is exceeded
Archaeology and Heritage	Rock paintings, Rock engraving, stone tools, and graves	No exploration activities at the outcrops with rock art paintings Implementing the CFP (Appendix 1)	ECO Archaeologist	Weekly	Observed damage to the paintings	Remedy the consequences by halting the activities
Soils	Loss of topsoil	All measures should be considered to present the loss of topsoil	ECO and Exploration Manager	weekly	The proliferation of new vehicle tracks	Rehabilitation of affected areas
Monitoring	EMP non-compliance	The ECO or the Proponent/Contractor should monitor the implementation of this EMP to ensure compliance. The ECO(s) should inspect the site throughout the exploration period and after completion.	ECO	Daily	Increase in health, safety, and environmental damage incidence	Daily safety talks, Remedy the consequences
Biodiversity	Loss of biodiversity	Comply with marked no-go areas and avoid areas sensitive to any type of disturbance. Clear only footprint areas to maintain as much of the remaining natural vegetation on site and to prevent loss of habitat (if so, advised by MEFT).	ECO Workers involved in this phase	Weekly	Vegetation clearance outside of marked areas.	Rehabilitation of affected areas to the satisfaction of the ECO
Health and Safety	Health and safety of the workers	-Workers should be trained on how to handle materials and equipment on site (if they do not already know how to) to avoid injuries.	ECO	Daily/Weekly	Health and safety incident	Remedy the consequences

Environmental Feature	Impact	Monitoring Actions	Implementation responsibility	Frequent	Threshold	Action if a threshold is exceeded
		<p>-Exploration equipment and materials transported to the site must be securely fastened to the vehicles, to ensure that the materials and equipment do not fall off the vehicles and cause injuries to anyone while transporting them.</p> <p>- All personnel should be provided with appropriate personal protective equipment (PPE), such as gloves, masks, safety boots, safety glasses, and hard hats always during exploration hours on site to prevent serious injuries or loss of life.</p> <p>-No employee should be allowed to drink alcohol before and during working hours as this may lead to mishandling of equipment which results in injuries and other health and safety risks.</p>	Workers Involved in this phase			
Noise	Noise nuisance	The exploration works schedule should be limited to normal working hours, between 08h00 and 17h00. This is to ensure generated noise does not become a nuisance to the neighbors.	ECO Exploration Manager	Weekly	A logged complaint about excessive noise	Revision of site activities

Environmental Feature	Impact	Monitoring Actions	Implementation responsibility	Frequent	Threshold	Action if a threshold is exceeded
Waste	Environmental Pollution	<p>-The site should be always kept tidy. All domestic and general construction waste produced daily should be cleaned and contained daily to prevent environmental pollution.</p> <p>-Separate waste containers (bins) for hazardous and domestic/general waste must be provided on-site to avoid mixing of waste.</p>	<p>ECO</p> <p>All workers are involved in this phase.</p>	Daily	<p>Visible litter around the project site</p> <p>A logged complaint</p>	<p>Clean-up of the affected areas and ensure exploration workers utilize waste containers provided.</p>
Transport	Transportation of workers to and from the site	<p>-Project workers will be transported, in an SUV, bus (or similar suitable passenger vehicle) to and from the site to ensure worker's safety.</p> <p>-No off-road driving</p>	ECO	Daily	A logged complaint about bad form of transport affecting occupational safety and health of workers	
Vehicular traffic safety	Increase in local traffic flow.	<p>-All drivers of the project vehicles should be in possession of valid and appropriate driving licenses to operate such vehicles.</p> <p>-Project vehicles should be in a roadworthy condition and serviced regularly to avoid accidents because of mechanical faults of vehicles.</p>	ECO	Weekly	A logged complaint about traffic increase or damage to roads	Find alternative access roads for the team. Rehabilitation of affected roads

Environmental Feature	Impact	Monitoring Actions	Implementation responsibility	Frequent	Threshold	Action if a threshold is exceeded
		-Vehicle drivers should not be allowed to operate vehicles while under the influence of alcohol. -No heavy trucks or project-related vehicles should be parked in biologically sensitive areas.				

3.5 Decommissioning and Rehabilitation

Successful rehabilitation requires careful consideration of the local ecological context in combination with rehabilitation goals. The most important steps in undertaking a successful rehabilitation program are planning and environmental awareness (environmental education) on the importance of progressive rehabilitation (or post-activity rehabilitation), and its importance to the environment. Furthermore, to successfully implement the planned rehabilitation, practically, this will depend on a few factors - the rehabilitation program, characteristics of the site, nature of the disturbance, rehabilitation methods, as well as resource availability.

Site-Specific Rehabilitation Plan

To ensure that they do their best to rehabilitate the disturbed areas, the Proponent intends to:

- Utilize stockpiled subsoil and topsoil to backfill the excavated pits/trenches.
- Make financial provisions that will be used for the post-exploration rehabilitation program.
- Backfilling of all pits and trenches with loose materials.
- Levelling of topsoil that was stockpiled for exploration purposes.
- Removal of project vehicles and equipment from the site and taking to designated parking facility off-site.
- All project support structures such as ablution facility (toilet and washroom system), and storage containers/tanks shall be demolished, and the waste taken to designated sites. The site areas on which these structures were set up will be rehabilitated to a pre-exploration state.
- All accumulated waste (hazardous, solid, and general) up until the cessation of exploration activities will be removed from the site and transported to designated off-site waste management facilities.

4 ENVIRONMENTAL MONITORING AND REPORTING

To minimize the "medium" and uphold "low" significance ratings of impacts identified and assessed in the ESA report, monitoring reports are to be compiled and submitted to the DEAF for archiving on a bi-annual basis (every 6 months throughout the project operations) or as required by the Environmental Commissioner (as per the ECC conditions). This practice will make any considerations for ECC renewal easy, as it nears expiration. Therefore, the Proponent must meritoriously monitor compliance and ensure auditing occurs for reporting to the DEAF. The audit submissions are done in compliance with the environmental legislation, and for record-keeping purposes.

APPENDIX 1: CHANCE FINDS PROCEDURE (AFTER KINAHAN, 2020)

Areas of proposed development activity are subject to heritage survey and assessment at the planning stage. These surveys are based on surface indications alone, and it is, possible that sites or items of heritage significance will be found during development work. The procedure set out here covers the reporting and management of such finds.

Scope: The “*chance finds*” procedure covers the actions to be taken from the discovery of a heritage site or item to its investigation and assessment by a trained archaeologist or other appropriately qualified persons.

Compliance: The “chance finds” procedure is intended to ensure compliance with relevant provisions of the National Heritage Act (27 of 2004), especially Section 55 (4): “*a person who discovers any archaeological Object must as soon as practicable report the discovery to the Council*”. The procedure of reporting set out below must be observed so that heritage remains reported to the NHC are correctly identified in the field.

The manager/Supervisor must report the finding to the following competent authorities:

- National Heritage Council of Namibia (061 244 375)
- National Museum (061 276800),
- National Forensic Laboratory (061 240461).

Archaeological material must NOT be touched. Tempering with the materials is an offence under the heritage act and is punishable upon conviction by the law.

Responsibility:

Operator:	To exercise due caution if archaeological remains are found
Foreman:	To secure the site and advise management timeously
Superintendent:	To determine safe working boundary and request inspection
Archaeologist:	To inspect, identify, advise management, and recover remains

Procedure:

Action by person identifying archaeological or heritage material:

- a) If operating machinery or equipment stops work
- b) Identify the site with flag tape
- c) Determine GPS position if possible
- d) Report findings to the foreman

Action by foreman

- a) Report findings, site location, and actions taken to the superintendent
- b) Cease any works in the immediate vicinity

Action by superintendent

- a) Visit the site and determine whether work can proceed without damage to the findings
- b) Determine and mark exclusion boundary
- c) Site location and details to be added to project GIS for field confirmation by archaeologist

Action by Archaeologist

- a) Inspect the site and confirm the addition to project GIS
- b) Advise NHC and request written permission to remove findings from work area
- c) Recovery, packaging, and labelling of findings for transfer to the National Museum

In the event of discovering human remains

- a) Actions as above
- b) Field inspection by archaeologist to confirm that remains are human
- c) Advise and liaise with NHC and Police
- d) Recovery of remains and removal to the National Museum or National Forensic Laboratory, as directed.
