

A REVISED CHECK-LIST OF BIRDS IN THE KALAHARI GEMSBOK NATIONAL PARK

M. G. L. MILLS

Kalahari Gemsbok National Park

Private Bag X890

P.O. Gemsbokpark

8815

Abstract – A more complete list of the birds in the Kalahari Gemsbok National Park is given, including the results of three and a half years of observations. A total of 214 species have now been identified for the Park, among which 75 are resident throughout the year, 37 are migrants, 14 are nomads and 88 are vagrants.

Introduction

Several lists of the birds in the Kalahari Gemsbok National Park, Republic of South Africa, have been published in recent years (de Villiers 1958; Prozesky and Haagner 1962; Broekhuysen, Broekhuysen, Martin, Martin, Martin and Morgan 1968; Maclean 1970). With the exception of Maclean (1970) these lists have been drawn up by the authors during short visits to the Park. However, Maclean only worked in the southern area for 19 months.

This list represents three and a half years observations over the entire Park, with additional records from Liversidge (*pers. comm.*). Several groups of birds, notably the raptors, pipits, larks and warblers, are difficult to identify in the field. Where any doubt exists as to the identity of a species, it has been omitted unless a specimen has been taken.

Systematic List

An indication of the status of each species in the Park is given according to the following key (after Kemp 1974);

R – resident (found in the Park throughout the year)

M – migrant (a species known to come to South Africa on a regular annual migration)

N – nomad (a regular, temporary visitor to the area)

V – vagrant (an irregular, temporary visitor to the area).

The number of each species has been taken from McLachlan and Liversidge (1966) and the nomenclature follows the *Check list of the birds of South Africa* (S.A.O.S. List Committee 1969).

1	OSTRICH (R) VOLSTRUIS	<i>Struthio camelus</i> Linnaeus
6	CAPE DABCHICK (V) KAAPSE DUIKERTJIE	<i>Podiceps ruficollis</i> (Pallas)
