INTRODUCTION.

The present volume is the twenty-fourth of a series of Annual Reports and contains summaries of observations made at weather stations in the Union of South Africa, Basutoland, Swaziland and Bechuanaland Protectorate during the year 1949.

For the purpose of this report, weather stations in South Africa are classified in three main groups, namely:-

- (1) First and second order stations, where observations are made at least twice daily, i.e. at the main observation hours 8 a.m. (0800) and at 2 p.m. (1400) South African Standard Time.
- (2) Third order stations, where observations are carried out at 8 a.m. only.
- (3) Rainfall stations, where rainfall is measured once daily at 8 a.m.

The tabular matter, as in preceding reports, is arranged in the following order:-

- (i) Climatological summaries for 94 first and second order stations.
- (ii) Climatological summaries for 119 third order stations.
- (iii) Monthly means and extremes of "grass-minimum" temperature at 19 stations.
- (iv) Monthly means of earth temperatures at various depths at 13 stations.
- (v) Monthly means and percentages of daily sunshine duration for 13 stations.
- (vi) Hourly means of air temperature for each month at 12 stations.
- (vii) Hourly means of relative humidity for each month at 12 stations.
- (viii) Monthly and annual amounts of precipitation and number of rainfall days at 2,819 stations.

In accordance with a recommendation made by the International Meteorological Organisation, the times of observation have been changed to 0800 and 1400 S.A. Standard Time as from the 1st January 1948. In previous years, observations were made at 0830 and 1500 respectively. This change in observation hours does not affect a long-period series of records based on the readings of maximum and minimum thermometers, whilst the effect on the continuity of rainfall records is negligible. However, on account of the diurnal variation of pressure, temperature, relative humidity and cloud amount, the values of these elements at the observation hours 0800 and 1400 are not directly comparable with those appearing in reports up to and including 1947.

As from January 1948 corrected mean station pressure values are reduced to the nearest 100 or 50 geopotential metre level, whereas from 1941 to 1948 they refer to the nearest 100 geodynamic metre level. The appropriate level for each station is given in the heading of the respective table, thus:- Pa at \_\_\_ gms.

INLEIDING.

Hierdie band is die vier-en-twintigste van 'n reeks Jaarverslae en bevat opsommings van waarnemings wat by weerstasies in die Unie van Suid-Afrika, Basutoland, Swasiland en Bejaeasaland-Protectoraat gedurende die jaar 1949 gedoen is.

Vir hierdie verslag word die weerstasies in drie hoof-groepe ingedeel, naamlik:-

- (1) Eerste en tweede orde stasies, waar tenminste tweemaal per dag, d.w.s. om 8 v.m. (0800) en om 2 n.m. (1400) S.A. Standaard Tyd, waarnemings gedoen word.
- (2) Derde orde stasies, waar waarnemings net eenkeer per dag, om 8 v.m. uitgevoer word.
- (3) Reënvalstasies, waar die meting van reënval eenkeer per dag (8 v.m.) onderneem word.

Die tabelle is gerangskik soos in vorige verslae en verskyn in die volgende orde:-

- (i) Klimatologiese opsommings van 94 eerste en tweede orde stasies.
- (ii) Klimatologiese opsommings van 119 derde orde stasies.
- (iii) Maandelikse gemiddeldes en uiterste waardes van 'grass-minimum' temperatuur by 19 stasies.
- (iv) Maandelikse gemiddeldes van grondtemperatuur op verskillende dieptes by 13 stasies.
- (v) Maandelikse gemiddeldes en persentasies van sonskynduur by 13 stasies.
- (vi) Uurlikse gemiddeldes van lugtemperatuur vir elke maand by 12 stasies.
- (vii) Uurlikse gemiddeldes van relatiewe vogtigheid vir elke maand by 12 stasies.
- (viii) Maandelikse en jaarlikse hoeveelhede neerslag en aantal reëndae by 2,819 stasies.

Volgens 'n aanbeveling van die Internasionale Meteorologiese Organisasie is die waarnemingstye vanaf 1 Januarie 1948 verander na 0800 en 1400 uur S.A. Standaard Tyd. In vorige jare is die waarnemings onderskeidelik om 0830 en 1500 gedoen. Hierdie verandering in waarnemingstye beïnvloed nie 'n langtermyn-reeks wat op die lesings van maksimum- en minimum-thermometers berus nie, terwyl die invloed op die kontinuiteit van reënvalreëke verontagsaam kan word. Te wyte aan die daaglikse variasie van lugdruk, temperatuur, relatiewe vogtigheid en wolkehoeveelheid, is die waardes van hierdie elemente by die waarnemingsure 0800 en 1400 egter nie direk vergelykbaar met die wat in vorige verslae tot en met 1947 verskyn.

Vanaf Januarie 1948 is die gekorrigeerde lugdrukwaardes tot op die naaste 100 of 50 geopotensiale meter-vlak herlei, terwyl dit vanaf 1941 tot 1948 na die naaste 100 geodinamiese metervlak bereken was. Die bepaalde niveau vir elke stasie word bo-aan die betrokke tabel vermeld soos volg:- Pa by \_\_\_ gms.

At all climatological stations, air temperatures are measured in a Stevenson screen housing a maximum and minimum thermometer and a dry and wet bulb psychrometer. The height of the bulb of the dry-bulb thermometer is 4 ft. above ground level. Means of wet-bulb thermometer readings only appear for first and second order stations.

'Grass-minimum' temperatures are obtained by an ordinary sheathed alcohol minimum thermometer exposed horizontally so that its bulb is not more than one inch above the surface of short cut grass.

Earth thermometers are of the usual Symons pattern, exposed in steel tubes at various depths.

Hourly values of temperature and relative humidity (pages 74 to 81) are deduced from the traces of Fries thermohygrographs which are exposed in Stevenson screens at a height approximately 4 ft. above ground level.

The duration of bright sunshine is measured by means of Campbell-Stokes sunshine recorders. The traces are evaluated according to the instructions appearing in the Observers' Handbook (M.O. London). In the computation of the percentage values, the "possible" sunshine in each case refers to its duration over a horizontal surface with an unobstructed horizon and clear sky at the latitude of the station in question.

Wind frequencies appearing in the climatological tables for first and second order stations represent the total frequency of wind directions observed at 0800 and 1400 S.A. Standard Time. For first order stations equipped with a Dines Pressure Tube Anemometer, however, the frequencies are derived from the anemograms read off hourly.

The standard rain-gauge used in the Union is 5 inches in diameter and is mounted on a stand so that its rim is 4 feet above ground level. Evaporation or rain-water from the gauge is reduced by having a small orifice to the collecting bucket and by enclosing the latter completely inside the outer stand.

On account of the many defects inherent in the hitherto existing system of numbering rainfall stations and recording rainfall data, an improved system has now been adopted. This system permits a greater efficiency in comparing and checking rainfall returns, and facilitates rapid reference to rainfall statistics for any part of the Union from the basic rainfall registers of this Bureau. According to this new scheme, South Africa is partitioned into quarter-degree sections which are numbered consecutively from left to right and from South to North as shown in the new Rainfall Section map appearing between pages 163 and 164. Each section has 900 intersections of one-minute intervals of latitude and longitude which, being numbered in progressive longitudinal order, are all potential station numbers. Thus a rainfall

By al die klimatologiese stasies word die lugtemperatuur in 'n Stevenson skerm gemet. Die skerm huisves 'n maksimum- en minimum-termmeter en 'n droog- en natbol-psychrometer. Die droëbol-termmeter is so gestel dat sy bol 4 vt. bo die grondvlak is. Gemiddelde lesings van die natbol-termmeter word slegs vir eerste en tweede orde stasies gepubliseer.

'Grassminimum' temperatuur word verkry van 'n gewone minimum-termmeter wat binne 'n glasbuis gemonteer, en horisontaal opgestel is, sodat sy bol nie meer as een duim bokant kortgeknipte gras lê nie.

Grondtermometers is die gewone Symons-tipe en word in staalbuis by verskillende dieptes blootgestel.

Uurlike waardes van temperatuur en relatiewe vogtigheids (bladsye 74 tot 81) is verkry uit die grafieke van Fries termohygrograwe wat in Stevenson-skerm op 'n hoogte van omtrent 4 vt. bo die grondvlak opgestel is.

Die sonskynduur is deur middel van Campbell-Stokes sonskynmeters verkry, terwyl die sonskynuur volgens die voorskrifte in die Waarnemershandboek (M.O. London) bepaal is. By die berekening van die persentasie-waardes het die „moontlike" sonskynuur in elke geval betrekking op die wat sou geld oor 'n horisontale oppervlakte wat 'n vrye horizon en wolklous hemel by die breedtegraad van die betrokke stasie.

Die windfrekwensies wat in die klimatologiese tabelle vir eerste en tweede orde stasies voorkom, verteenwoordig die totale frekwensie van windrigtings wat om 8 v.m. en 2 n.m. waargeneem is. Vir eerste orde stasies wat met 'n Dines drukbuisanemometer voorsien is, word die frekwensies egter uurlike van die anemogramme afgeles.

Die standaard reënmeter, wat in die Unie in gebruik is, het 'n deursnee van 5 duim en is op 'n voetstuk gemonteer sodat die rant daarvan 4 voet van die bodem is. Verdamping van reënwater uit die meter word beperk deur die nou opening van die opvangemartjie en deur die feit dat laaggenomde geheel en al binne die voetstuk van die meter ingesluit is.

Wanneer die baie tekortkominge van die tot onlangs bestaande stelsel vir die toekenning van stasienommers en die boekstawing van reënvalgegevens, is 'n verbeterde stelsel nou in werking gebring. Hierdie nuwe stelsel is baie meer doeltreffend wat betref die vergelyking en toetsing van reënvalgegevens, en vergemaklik en bespoedig die nasien van enige deel van die Unie se reënvalsyfers in die groot-registers van die Meerburo. Volgens die nuwe stelsel is Suid-Afrika in kwartgraad seksies verdeel wat agtereenvolgens van links na regs en van Suid na Noord genummer is soos aangedui op die nuwe reënvalseksieskaart wat tussen bladsye 163 en 164 verskyn. Elke seksie bevat op sy beurt 900 kruispunte van een-minuut-intervalle van lengte- en breedtegraad wat met toevallige lengtegraad genummer word en almal eventuele stasienommer is. In sy geheel is 'n stasie-

station number in full consists of two parts, the first referring to the section and the second to its position within the section. The order of numbering within a particular section is shown in the following example:-

nommer dus tweeledig, d.w.s., die eerste deel het betrekking op die seksie en die tweede op sy posisie binne die seksie. Die volgorde van nommers binne 'n bepaalde seksie word verduidelik in die volgende voorbeeld:-

The circles represent the present distribution of stations within section 145. Since intersection of one-minute intervals of latitude and longitude in this country are approximately one mile apart it is clear that, according to this system, the numbers of all possible stations are predetermined whilst provision is made for a density of approximately one station per square mile.

The following is a list of symbols used, whose meanings are not already indicated in the headings of the tables:-

- ⊙ = Latitude.
- λ = Longitude.
- H = Height of station above M.S.L.
- h<sub>d</sub> = Height of dry-bulb thermometer above ground level.
- h<sub>r</sub> = Height of rain-gauge above ground level.
- h<sub>w</sub> = Height of anemometer head above ground level.
- Σ = Sum (Total amount of precipitation).
- = No observations, or no reliable observations.
- ( ) = Figures in brackets are computed from an insufficient number of daily readings.

Die sirkels het betrekking op die teenwoordige distribusie van stasies in seksie 145. Aangesien die kruispunte van een-minuut interwalle van lengte- en breedtegraad in ons land min of meer een myl van mekaar is, is dit duidelik dat die nommers van alle moontlike stasies, binne 'n netwerk met 'n digtheid van een stasie per vierkante myl, vooruit bepaal is.

Die volgende is 'n lys van simbole waarvan die betekenis nie alreeds in die hoofde van die tabelle verduidelik is nie:-

- ⊙ = Breedtegraad.
- λ = Lengtegraad.
- H = Hoogte van stasie bo seespieël.
- h<sub>d</sub> = Hoogte van droëbol-termmeter bo grondvlak.
- h<sub>r</sub> = Hoogte van reënmeterrand bo grondvlak.
- h<sub>w</sub> = Hoogte van windmeterkop bo grondvlak.
- Σ = Som (Totale hoeveelheid neerslag).
- = Geen waarnemings, of geen betroubare waarnemings.
- ( ) = Syfers in hakies is bereken uit 'n ontoereikende aantal daaglikse waarnemings.

3rd ORDER STATIONS - STASIES van die 3e ORDE

Table with columns for Month, Mean Air Temperature (Tm), Extremes (Max, Min), Lowest Max. (Laagste Maks.), Highest Min. (Hoogste Min.), Precipitation (R.), and Number of Days with Aantal Dae met. Includes sub-columns for Max, Min, Date, and various precipitation and day counts.

Table for station No. 20/779 (Old No. 26/4288) KIRSTENBOESCH. Includes monthly and yearly data for temperature, precipitation, and day counts. Coordinates: φ = 33°59'S, λ = 16°26'E. Elevation: H = 295 vt/ft.

Table for station No. 20/866 (Old No. 26/4288) CAPE TOWN (Royal Observatory). Includes monthly and yearly data for temperature, precipitation, and day counts. Coordinates: φ = 33°56'S, λ = 16°29'E. Elevation: H = 40 vt/ft.

Table for station No. 21/289 (Old No. 26/4308) BELLVILLE. Includes monthly and yearly data for temperature, precipitation, and day counts. Coordinates: φ = 33°59'S, λ = 16°34'E. Elevation: H = 181 vt/ft.

Table for station No. 21/866 (Old No. 26/4322) STELLENBOESCH (Univ. Plans/Warm). Includes monthly and yearly data for temperature, precipitation, and day counts. Coordinates: φ = 32°56'S, λ = 16°52'E. Elevation: H = 380 vt/ft.

3rd ORDER STATIONS - STASIES van die 3e ORDE

Table with columns for Month, Air Temperature (Means, Extremes, Lowest Max., Highest Min.), Mean Rel. Hum., Mean Cloud Amt., Precipitation, and Number of Days with Precip. Includes sub-columns for Max., Min., Date, etc.

Table for No. 181/868 (Old No. 25/4231) WEZA (Plantation/Plantasie). Includes monthly and yearly data for temperature, humidity, and precipitation.

Table for No. 182/879 (Old No. 25/4246) PADDOCI. Includes monthly and yearly data for temperature, humidity, and precipitation.

Table for No. 190/868 (Old No. 20/3345) BRANDVLEI. Includes monthly and yearly data for temperature, humidity, and precipitation.

Table for No. 201/892 (Old No. 23/3760) NORMANDALE. Includes monthly and yearly data for temperature, humidity, and precipitation.

3rd ORDER STATIONS - STASIES van die 3e ORDE

Table with columns for Month Mean, Air Temperature (Means Gemiddeldes Tm, Extremes Uiterstes, Lowest Max., Highest Min.), Precipitation in inches (Neerslag in duime), and Number of Days with Aantal Dae met. Includes sub-columns for Max, Min, and various precipitation types.

Table for station No. 204/819 (MOHALESPOEK). Includes header information (phi = 30°09'S, lambda = 27°28'E, H = 5,250 vt/ft) and a grid of monthly data from I to XII, plus Year and Year Year data.

Table for station No. 211/661 (UMBOGINTWINI). Includes header information (phi = 30°01'S, lambda = 90°53'E, H = 224 vt/ft) and a grid of monthly data from I to XII, plus Year and Year Year data.

Table for station No. 238/616 (LONG KUNSI). Includes header information (phi = 29°46'S, lambda = 29°51'E, H = 4,100 vt/ft) and a grid of monthly data from I to XII, plus Year and Year Year data.

Table for station No. 238/806 (EMERALD DALE). Includes header information (phi = 29°56'S, lambda = 29°57'E, H = 3,900 vt/ft) and a grid of monthly data from I to XII, plus Year and Year Year data.

3rd ORDER STATIONS - STASIES van die 3e ORDE

Table header for weather data including columns for Air Temperature (Means Gemiddeldes, Extremes Uiterstes, Lowest Max., Highest Min.), Precipitation in inches, and Number of Days with Aantal Dae met.

Weather data for No. 438/731 (Ou No. 8/1517A) VREDEBURG. Station coordinates: φ = 26°41'S, λ = 27°55'E, H = 4,723 vt/ft. Data includes monthly and yearly averages for temperature and precipitation.

Weather data for No. 443/463 (Old No. 3/1988) RIETVLEI. Station coordinates: φ = 26°43'S, λ = 30°16'E, H = 5,048 vt/ft. Data includes monthly and yearly averages for temperature and precipitation.

Weather data for No. 444/126 (Ou No. 9/2012A) ATNOL (Landbou Nav. St.). Station coordinates: φ = 26°36'S, λ = 30°35'E, H = 5,000 vt/ft. Data includes monthly and yearly averages for temperature and precipitation.

Weather data for No. 472/279 (Old No. 7/1275) LICHTENBURG. Station coordinates: φ = 26°09'S, λ = 26°10'E, H = 4,845 vt/ft. Data includes monthly and yearly averages for temperature and precipitation.

3rd ORDER STATIONS - STASIES van die 3e ORDE

Table with 12 main columns: Month/Mand, Means Gemiddeldes Tm (0300, x, n, x+2/2), Extremes Uiterstes (Max, Dat., Min, Dat.), Lowest Max. Laagste Maks., Highest Min. Hoogste Min., Mean Rel. Hum. Gem. Rel. Vochtigh., Mean Cloud Amt. Gem. Molkyghd., Precipitation in inches. Neerslag in Duime., and Number of Days with Aantal Dae met (Precip. Neerslag, Thunder, Hail, Snow, Fog, etc.).

No. 475/456 (Ou No. 8/1476) KRUGERSDORP (Coronation Park) φ = 26°06'S; λ = 27°46'E; H = 5,374 vt/ft; ht = 4 vt/ft; hr = 4 vt/ft.

Monthly and yearly data for Krugersdorp (Coronation Park), including temperature, precipitation, and other meteorological metrics.

No. 475/528 (Old No. 8/1484) ZURBEXOM. φ = 26°18'S; λ = 27°48'E; H = 5,176 vt/ft; ht = 4 vt/ft; hr = 4 vt/ft.

Monthly and yearly data for Zurbexom, including temperature, precipitation, and other meteorological metrics.

No. 476/72 (Ou No. 8/1560) JOHANNESBURG (Joubert Park) φ = 26°12'S; λ = 28°03'E; H = 5,750 vt/ft; ht = 4 vt/ft; hr = 4 vt/ft.

Monthly and yearly data for Johannesburg (Joubert Park), including temperature, precipitation, and other meteorological metrics.

No. 476/103 (Old No. 8/1563) JOHANNESBURG (City Deep) φ = 26°12'S; λ = 28°03'E; H = 5,600 vt/ft; ht = 4 vt/ft; hr = 4 vt/ft.

Monthly and yearly data for Johannesburg (City Deep), including temperature, precipitation, and other meteorological metrics.

3rd ORDER STATIONS - STASIES van die 3e ORDE

Table with 18 columns: Month, Mean, Mean Cloud hct., Precipitation in inches, Number of Days with Aerial Day met. Sub-headers include Air Temperature, Means, Extremes, Lowest Max., Highest Min., Mean Rel. Hum., Mean Cloud hct., Precipitation, and Number of Days with Aerial Day met.

Table for station No. 481/14 (Jessievale). Includes monthly data (I-XII) and annual totals for Mean, Precipitation, and Number of Days with Aerial Day met.

Table for station No. 482/229 (Mbokane). Includes monthly data (I-XII) and annual totals for Mean, Precipitation, and Number of Days with Aerial Day met.

Table for station No. 483/64 (Balekane). Includes monthly data (I-XII) and annual totals for Mean, Precipitation, and Number of Days with Aerial Day met.

Table for station No. 511/855A (Buffelspoort). Includes monthly data (I-XII) and annual totals for Mean, Precipitation, and Number of Days with Aerial Day met.

\*Observations at 0830 a.m./Naarsondings om 0830 v.m.

3rd ORDER STATIONS - STASIES van die 3e ORDE

Table header for station data including columns for Air Temperature (Means Gemiddeldes, Extremes Uiterstes, Lowest Max., Highest Min., Hoogste Min.), Precipitation in inches (Weerslag in duime), and Number of Days with Aantal Dae met.

Station data for PUSELLA. Includes monthly and yearly temperature and precipitation records. Station number: No. 679/289 (Old No. 2/1136). Coordinates: φ = 23°49'S, λ = 30°10'E. Elevation: H = 2,456 vt/ft.

Station data for CHESTER. Includes monthly and yearly temperature and precipitation records. Station number: No. 680/167 (Old No. 2/1169A). Coordinates: φ = 23°47'S, λ = 30°36'E. Elevation: H = 1,700 vt/ft.

Station data for MONDSWANI (Letaba Camp). Includes monthly and yearly temperature and precipitation records. Station number: No. 682/141 (Old No. 3/1176). Coordinates: φ = 23°51'S, λ = 31°05'E. Elevation: H = 704 vt/ft.

Station data for MAHALAPPE (Agric/Landbou). Includes monthly and yearly temperature and precipitation records. Station number: No. 716/515 (Old No. 32/98). Coordinates: φ = 23°05'S, λ = 26°48'E. Elevation: H = 3,300 vt/ft.

3rd ORDER STATIONS - STASIES van die 3e ORDE

Table with columns: Month, Mean, Max, Min, Extremes, Lowest Max, Highest Min, Mean Rel. Hum., Mean Cloud Amt., Precipitation, Number of Days with. Includes sub-headers for temperature, humidity, and precipitation.

Station data for LEMANA (No. 723/71). Columns include monthly and yearly temperature, humidity, and precipitation data.

Station data for GOOLDSVILLE (No. 766/858). Columns include monthly and yearly temperature, humidity, and precipitation data.

Station data for FUNDU MARIA (No. 768/11). Columns include monthly and yearly temperature, humidity, and precipitation data.

Station data for SEROWE (No. 803/383). Columns include monthly and yearly temperature, humidity, and precipitation data.

GRASS TEMPERATURE 1949 ORASS TEMPERATURES.
