

GAME COUNTS IN NORTH-WEST NAMIBIA

June 2007

Total Population Estimates

Total Number of Animals seen each year

6.3 million ha of north-west Namibia

Species	Minimum pop estimate	Likely pop estimate (ESW)
Gemsbok	21,955	40,182
Giraffe	606	1,486
Kudu	2,165	5,346
Ostrich	5,357	9,912
Springbok	61,431	149,272
Steenbok	1,377	14,536
Zebra	6,460	10,339

The minimum estimate assumes all animals along a 1km wide transect are seen; the likely estimate corrects for detection using ESW. Estimates for individual conservancies for springbok, gemsbok and giraffe use a more conservative estimation approach and consequently add up to less than the regional total estimate indicated here.

Population estimates for conservancies:

Estimates with no brackets take account of drop off in detection of animals with distance from the transect line and are calculated using effective strip widths (ESW) for each species. Estimates inside brackets are minimum estimates assuming all animals within 500m on each side of the transect line are detected.

NB: These are conservative estimates as, on average, 30% of the count area is assumed to hold no animals. This is due to the fact that in each conservancy, some areas are not sampled due to inaccessibility. In addition, for springbok, gemsbok and giraffe, large groups have been excluded from extrapolations. All estimates are rough approximations and great care should be taken when using these data for quota setting.
