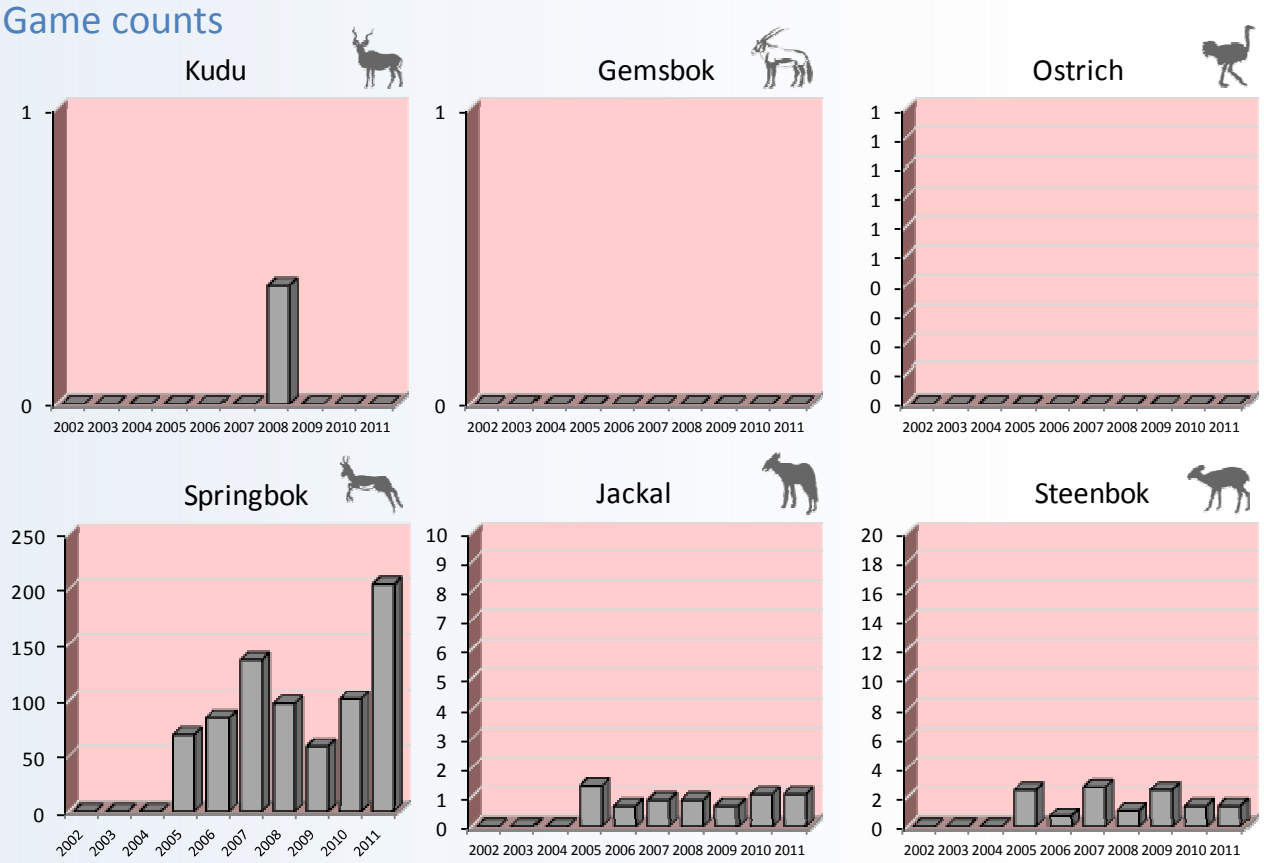
Annual Natural Resource Report

Wildlife Trends

Game counts



Data from the annual game count. The Y-axis represents the number of animals seen per 100km driven.

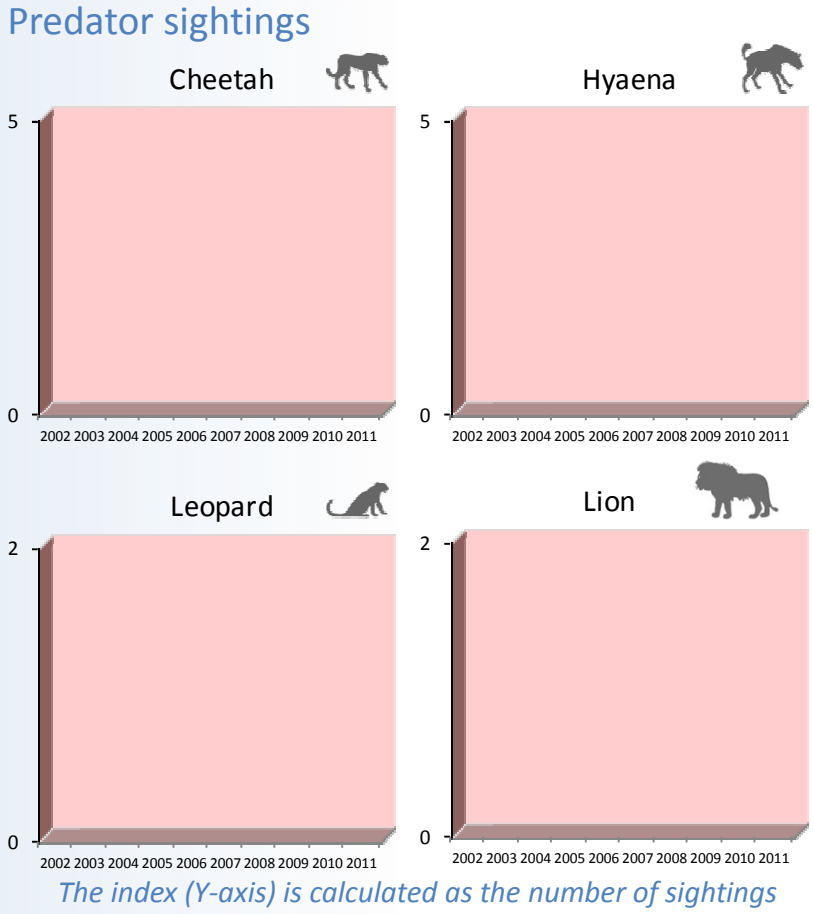
Photo: T. Robertson

Wildlife Populations

Species	Animals seen	Likely Estimate
Jackal	5	
Springbok	902	9780
Steenbok	6	430

Photo: T. Robertson

Predator sightings



The index (Y-axis) is calculated as the number of sightings per event book

Locally rare species

Species	Animals seen

Locally rare species are those which are currently infrequently observed in the conservancy

Mortalities

Species	Animals dead
Jackal	2
Kudu	1
Springbok	5

Mortalities recorded during patrols

Wildlife Use

Species	Quota		Utilisation					Total Used
	Total	Trophy	Own Use / Premium	Trophy	Shoot & Sell	Capture	Problem Animal	
Jackal	10							
Springbok	150		27		100			127

Wildlife Introductions

Year	Species	Number
2008	Gemsbok	85
2008	Springbok	350

Natural Resource Management

Performance:

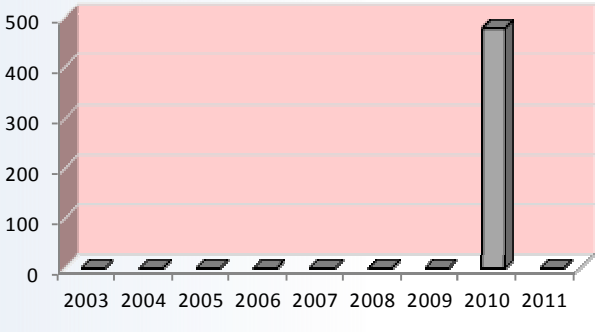
	Category	Score	Performance (Weak – Good)
1	Adequate staffing	2	
2	Adequate expenditure	2	
3	Audit attendance	1	
4	NR management plan	3	
5	Zonation	2	
6	Leadership	2	
7	Display of material	2	
8	Event Book modules	2	
9	Event Book quality	2	
10	Compliance	2	
11	Game census	2	
12	Reporting & adaptive m/ment	2	
13	Law enforcement	2	
14	HWC	1	
15	Sources of NR income	1	
16	Benefits produced	2	
17	Resource Sustainability	3	

Red bars indicate weak areas in the conservancy management performance which need to be addressed. Green bars indicate positive management performance.

Effort: **Number of Community Game Guards:** 7

Environmental monitoring

Rainfall (mm)



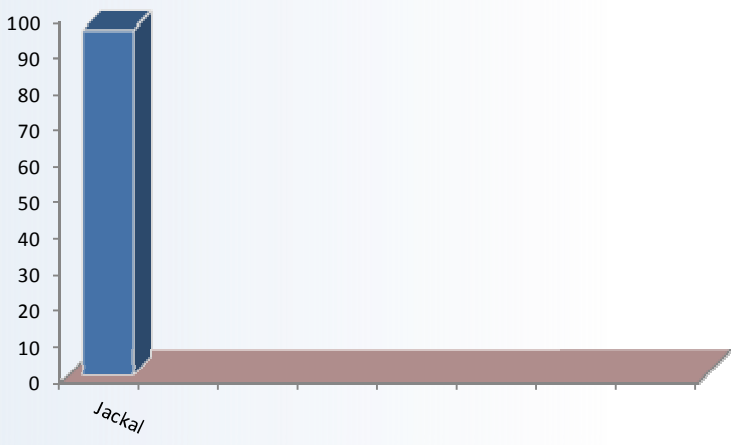
Years with no bars indicate gaps in data collection

Threats

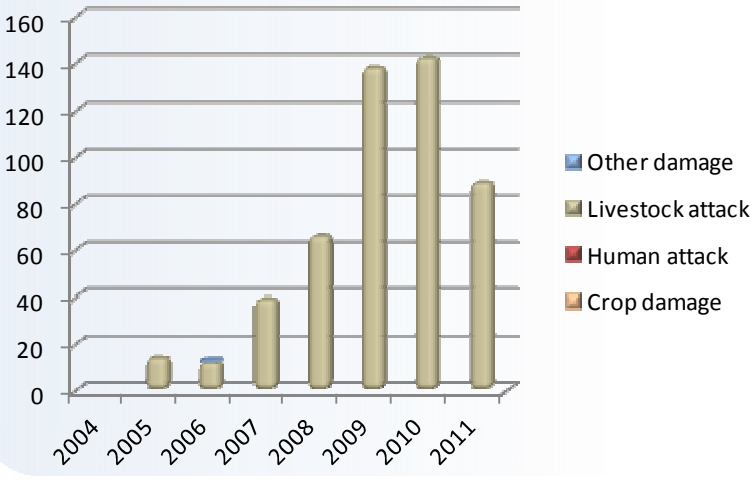
Human-Wildlife Conflict

Species	2004	2005	2006	2007	2008	2009	2010	2011
Caracal		1			1	3		
Jackal		12	13		55	87	142	96

Species

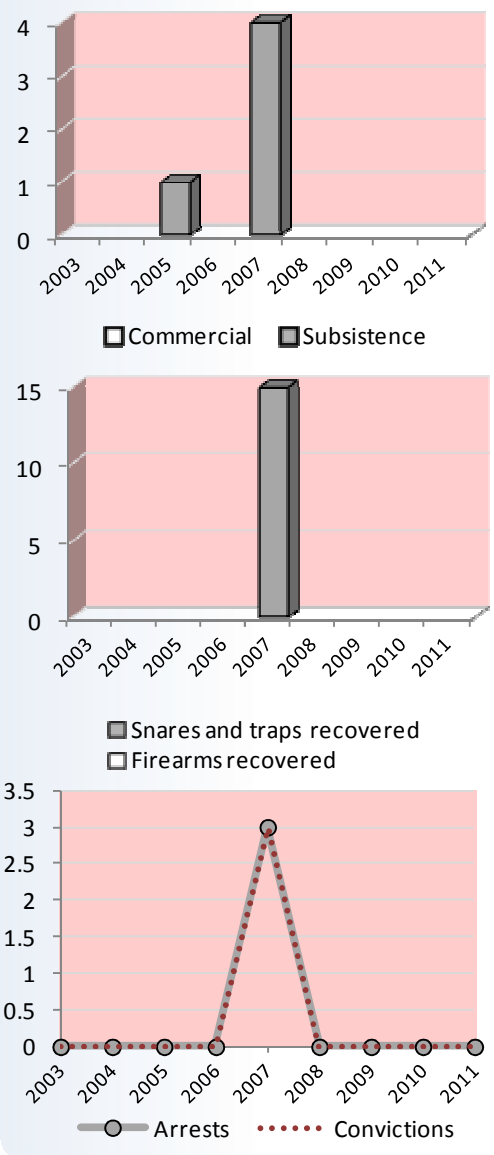


Damage



Poaching

Incidents



The species chart indicates the most troublesome to least troublesome conflict species in the conservancy. The Y-axis in HWC and poaching charts represents number of incidents.
