Sorris Sorris

Annual Natural Resource Report

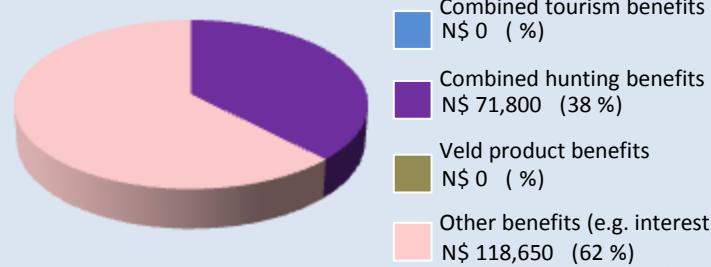

maximising wildlife benefits by minimising threats...

Conservancy status

Benefits from natural resources in 2011

The chart shows the main benefit sources and values and their percentage of the total benefits

Approximate Total Benefits N\$ 190,450

Two of the most significant benefits for the conservancy:

- ✓ cash income to the conservancy to cover running costs and invest in developments
- ✓ employment benefits to conservancy residents

Conservancy income	N\$ 188,350
--------------------	-------------

Employment benefits	Private Sector	3 staff	N\$ 2,100
	Conservancy	5 staff	N\$ 51,000

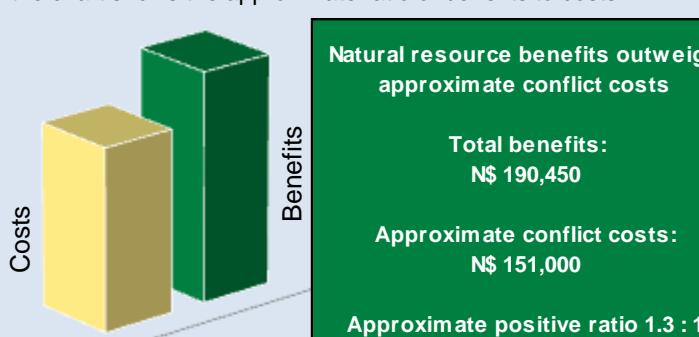

Cost of natural resource conflicts in 2011

estimates are based on average national values

Estimated human wildlife conflict cost	N\$ 151,000
Estimated poached high value species loss	N\$ 0
Total conflict cost estimate	N\$ 151,000

Natural resource cost–benefit ratio in 2011

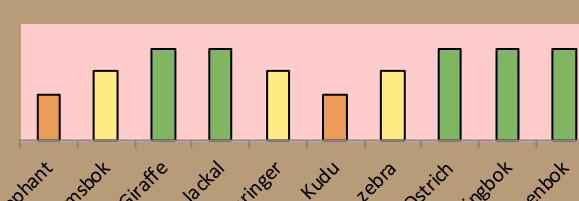

The chart shows the approximate ratio of benefits to costs

Management performance in 2012

Category	Score	Performance
1 Adequate staffing	3	
2 Adequate expenditure	3	
3 Audit attendance	6	
4 NR management plan	1	
5 Zonation	3	
6 Leadership	1	
7 Display of material	1	
8 Event Book modules	3	
9 Event Book quality	3	
10 Compliance	0	
11 Game census	2	
12 Reporting & adaptive m/ment	1	
13 Law enforcement	3	
14 Human Wildlife Conflict	3	
15 Sources of NR income	3	
16 Benefits produced	2	
17 Resource Sustainability	4	

Wildlife status summary in 2012

Key to the status barometer

Wildlife status

extinct very rare rare uncommon common abundant

weak/bad reasonable good

Success/threat flags

Conservancies reduce environmental costs while increasing environmental benefits. Benefits from wildlife can far outweigh human wildlife conflict costs.

Potential value estimates (N\$) for quotas are based on:

- Potential trophy value - the average national trophy value of each trophy species multiplied by the quota number
- Potential other use value - the average national meat value of each common species multiplied by the quota number
 - the average live sale value of each high value species (indicated with an *) multiplied by the quota number
 - high value species are never used for meat

• Potential trophy value - the average national trophy value of each trophy species multiplied by the quota number

• Potential other use value - the average national meat value of each common species multiplied by the quota number

- the average live sale value of each high value species (indicated with an *) multiplied by the quota number

- high value species are never used for meat

With Event Book Data

Not all data or species are shown on this report; use your Event Book for more information

2012

monitoring numbers and trends for a healthy conservancy...

Current wildlife numbers and status

Species	Animals Seen 2012	Range		Wildlife Status		
		Minimum Estimate	Likely Estimate	Count Trend	National Guideline	Desired Number
Elephant						
Gemsbok						
Giraffe	14	14 - 30				
Jackal	5	5 - 20				
Klipspringer						
Kudu						
Mtn. zebra						
Ostrich	60	583 - 870				
Springbok	616	2123 - 5050				
Steenbok	20	94 - 1080				

Wildlife Status

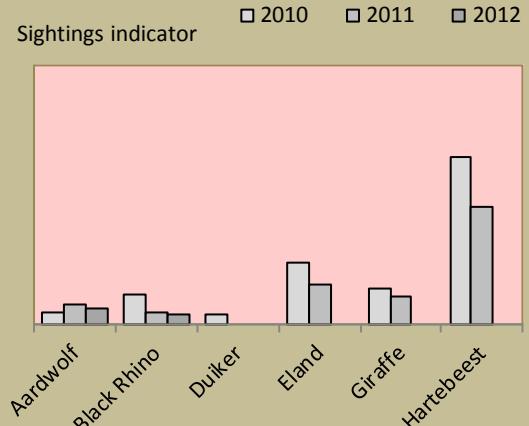

Count trend – gives the species status in the conservancy based on game count trend data.

National guideline – gives the species status in the conservancy using national guidelines for the conservancy; for example, lions may cause local problems, but are of high value and are rare at landscape level.

Desired number – gives the species status in the conservancy based on what the conservancy would like to have.

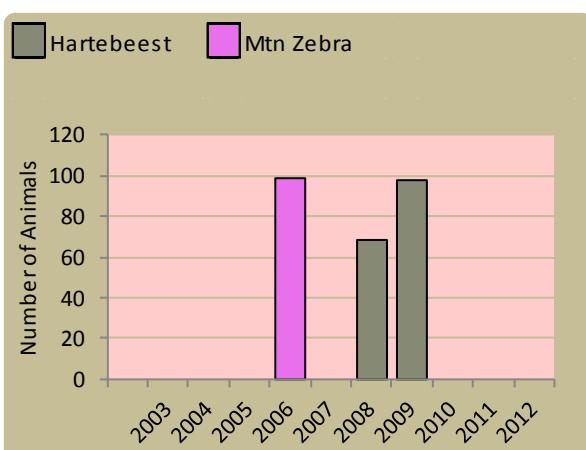

dark green (abundant) – there should be less;
light green (common) – the desired number is reached;
yellow (uncommon) – there should be more;
light orange (rare) – there should be more than double;
dark orange (very rare) – there should be more than triple;
red (extinct) – the species needs to be reintroduced.

Locally rare species

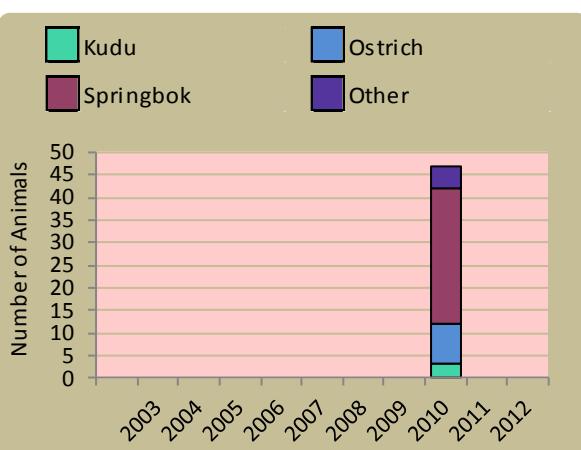

Locally rare and endangered species are not found very often in the conservancy and need special conservation attention.

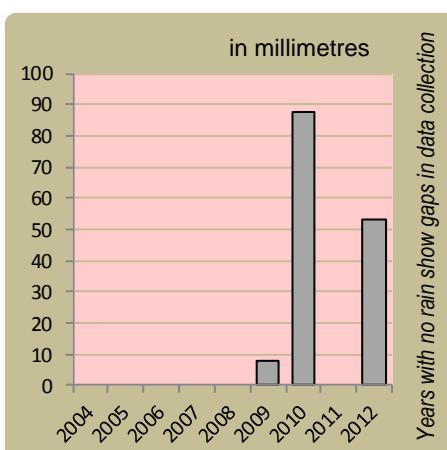

Wildlife introductions

Wildlife mortalities

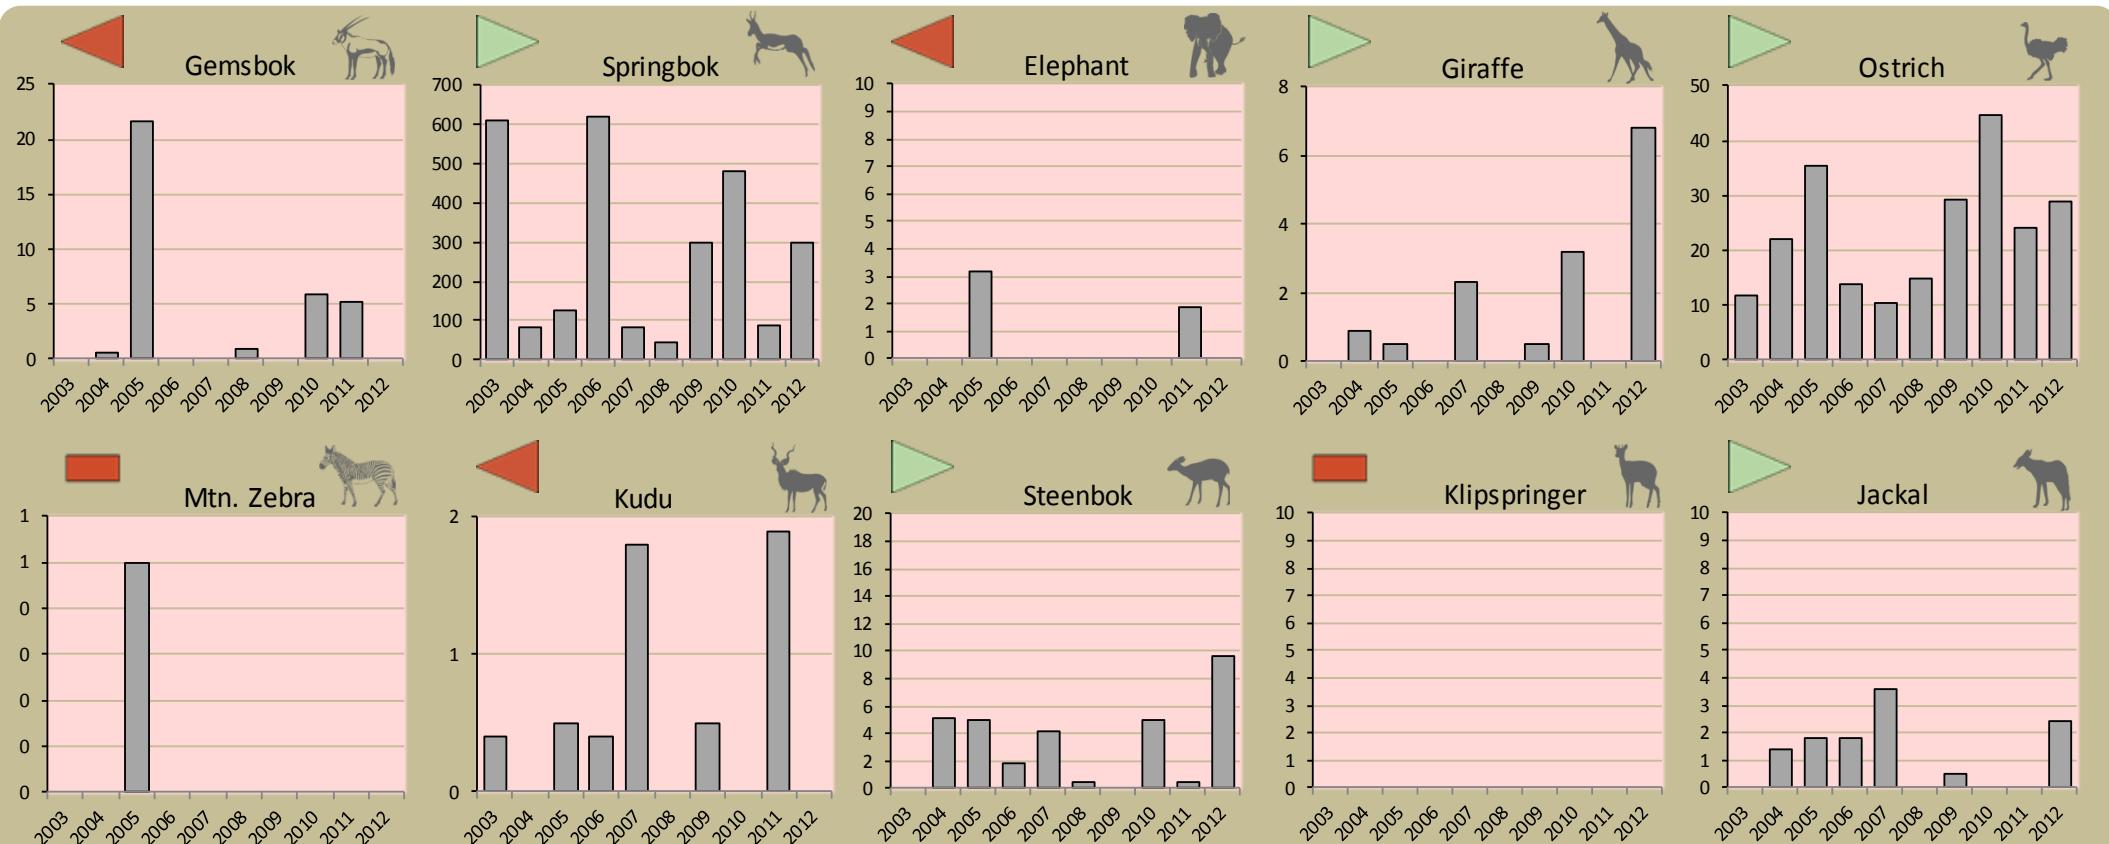

Annual rainfall

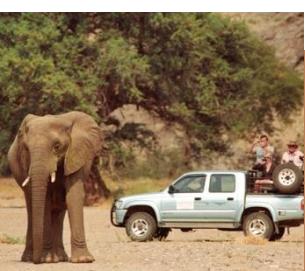

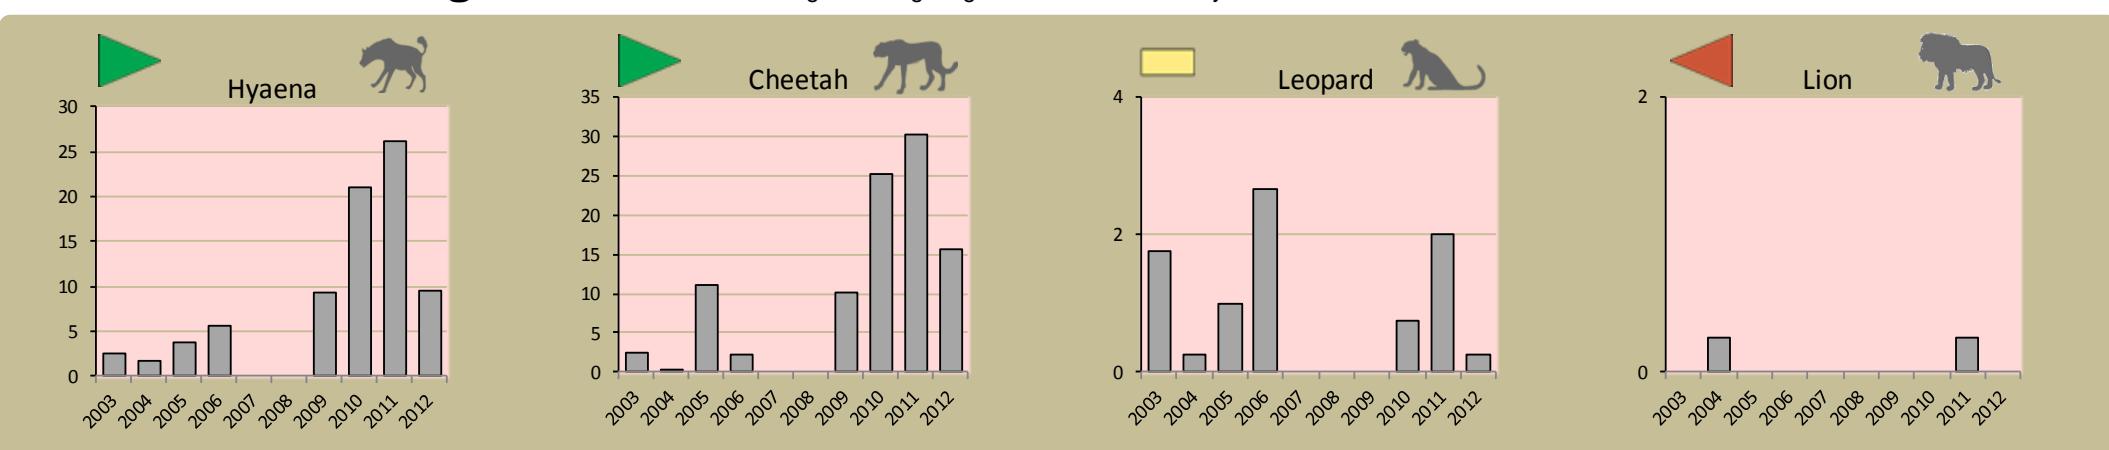

Annual game count

charts show the number of animals seen each year per 100 km driven during the game count
status barometers reflect the general count trend over the last 5 years

Predator monitoring

charts show the average number of animals seen per Event Book each year
status barometers reflect the general sightings trend over the last 5 years

Wildlife provides a wide range of benefits.
Some wildlife can cause conflicts,
but all wildlife is of value to tourism,
trophy hunting and a healthy environment.

By using all the available information
and adapting and improving activities,
threats such as human wildlife conflict,
poaching and other issues can be minimised.
