Estimates

Lotiniates									
Species	Estimate	95% CL Low	95% CL High	Model					
Duiker	1,030	660	1,620	HN					
Elephant	2,070	1,280	3,350	HN					
Gemsbok	680	365	1,280	HN					
Hartebeest	300	140	750	U					
Kudu	1,455	980	2,160	HN					
Ostrich	280	145	540	U					
Roan	650	320	1,300	U					
Steenbok	2,195	1,590	3,035	HN					
Warthog	185	100	350	U					
Wildebeest	5,185	3,280	8,200	U					

Estimates (rounded) were derived using DISTANCE analysis which takes account of drop-off in animal detectability with distance from the transect line. Ten species had sufficient sightings to adequately derive species detection curves and therefore produce estimates. . Model: U=uniform; HN=half normal.

Synopsis

Line transects were started in 2017 and represent almost half of the total area of the conservancy and include most of the waterholes. The area not covered by transects has low animal densities due to reduced habitat suitability and people pressure.

Transect counts have recorded 22 species including 6 predator species. Based on spoor sightings hyaena are the most common predator, followed by leopard and wild dog.

The top 3 species in terms of sightings between 2017 and 2019 included wildebeest, elephant and kudu.
