

Okanguati Natural Resource Report

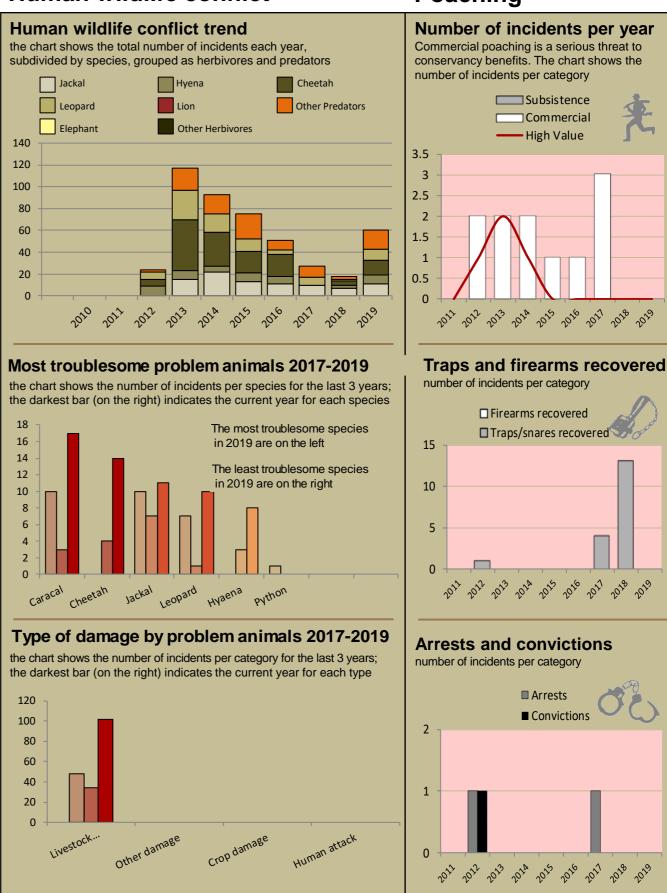

maximising wildlife returns by minimising threats...

Indicators 18 & 19 are influenced by external factors and are not considered a reflection of conservancy management. They indicate the current status of wildlife in the conservancy in relation to a theoretical optimal situation.

man wildlife conflict Poaching

Wildlife removals - quota use and value

Potential value estimates (N\$) for species are based on:

• Potential trophy value - the average trophy value for that species in the conservancy landscape

trophy values vary depending on trophy quality, international recognition of the hunting operator and the hunting area

• Potential other use value - the average meat value for common species

the average live sale value of each high value species (indicated with an *). High value species are never used for meat

Fractions of animals indicate that a quota of 1 animal was awarded with conditions i.e. a) over a period of several years

b) is shared with other conservancies

	Quota 2019			Animals actually used in 2019					Potential	Potential

Natural Resource Report continued...

monitoring numbers and trends for a healthy conservancy...

Current wildlife numbers and status

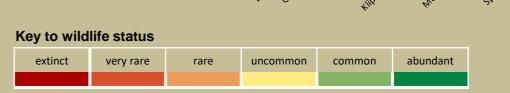

Desired Number – gives the species status in the conservancy based on what the conservancy would like to have.

dark green (abundant) - reduce a lot; light green (common) - reduce a little; yellow (uncommon) - keep numbers the same;

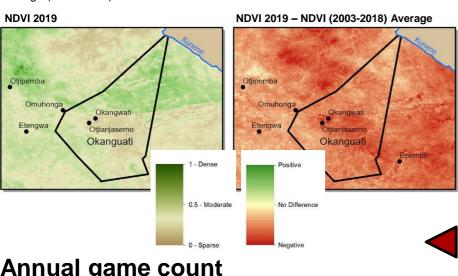

light orange (rare) - double numbers;

dark orange (very rare) - more than double numbers.

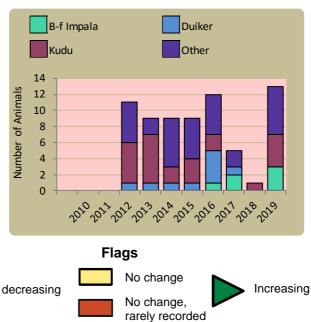

Vegetation monitoring

Green vegetation index (NDVI). Maps show vegetation cover during Feb-Apr of the current year and the difference between the current year and the long-term average (2003-2018)

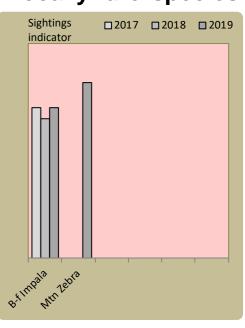

Wildlife mortalities

Locally rare species

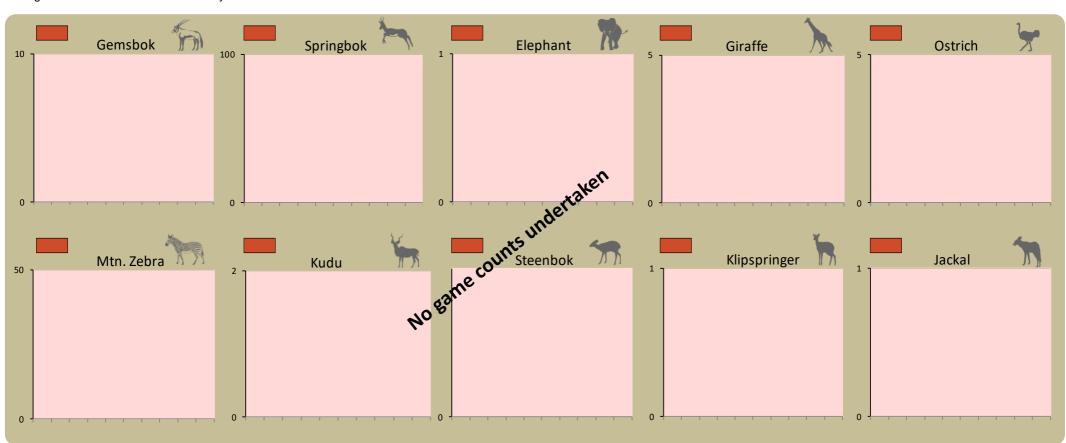

Wildlife status summary in 2019

Locally rare species are not found very often in the conservancy and need special conservation attention.

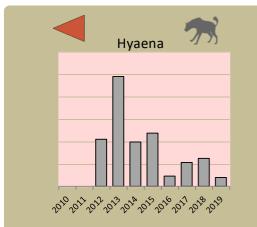

Annual game count

Charts show the number of animals seen each year per 100 km driven during the game count. As a point of reference the dashed horizontal line represents the combined 10 year average in Palmwag and Etendeka concessions. Status flags reflect the general count trend over the last 5 years.

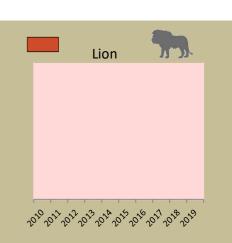

Predator monitoring

charts show the average number of animals seen per Event Book each year status barometers reflect the general sightings trend over the last 5 years

Wildlife provides a wide range of benefits. Some wildlife can cause conflicts, but all wildlife is of value to tourism, trophy hunting and a healthy environment. By using all the available information and adapting and improving activities, threats such as human wildlife conflict, poaching and other issues can be minimised.

Governance Performance Rating How well did the conservancy perform in the past year?

Performance Category	This Year	Prev. Year	Explanation of performance category				
1 Member engagement			The conservancy is adequately engaging its members				
2a Benefit planning			The conservancy developed its BDP in a transparent and participatory manner				
2b Benefit distribution			The conservancy distributes benefits to its members in a fair, transparent and equitable manner				
3 Accountability			Conservancy members are holding the management committee accountable				
4 Compliance			The conservancy is compliant with the standard operating proceedures (SOPs)				
5 Stakeholder engagement			The conservancy maintains relationships with key external stakeholders				
6 Financial management			The conservancy is effectively managing its finances
