Otjombinde Climate and Vegetation Report

D1

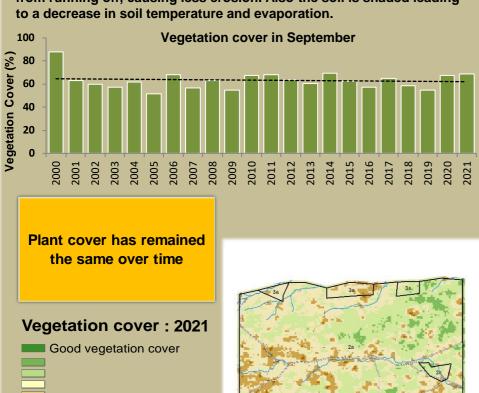

Adapting in response to the current environmental conditions ...

Seasonal trends in rainfall and vegetation (2021 / 2022 Season)

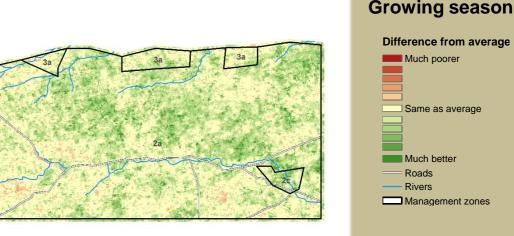

Vegetation cover trend (2000 - 2021)

High vegetation cover is good because more rainwater is prevented from running off, causing less erosion. Also the soil is shaded leading

- 1) Settlement & Cropping Area
- 2b) Multiple Use: Hunting Priority
- 2d) Multiple Use: Mining Priority
- 3b) Exclusive Wildlife: Trophy Hunting
- 4) Forest

Vegetation productivity (February to April) 2022

Zones

2a) Multiple Use: Livestock Priority

- 2c) Multiple Use: Tourism Priority
- 3a) Exclusive Wildlife: All Utilisation
- 3c) Exclusive Wildlife: Tourism 3d) Exclusive Wildlife: No Disturbance

Management Options

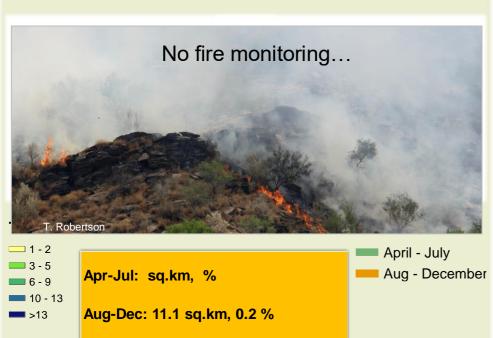

-Do nothing

Fire management

Much bare ground

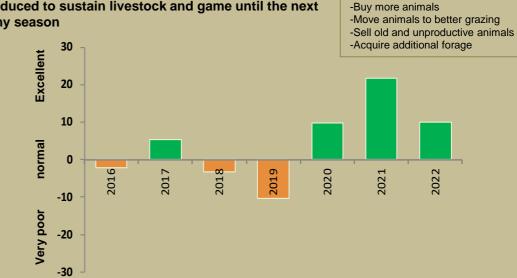

Burns between 2000 and 2021

When and where it burnt in 2021

Forage availability

During the growing season enough forage must be produced to sustain livestock and game until the next rainy season

Above average forage availability

Climate and vegetation patterns assist in our understanding of the status of wildlife and livestock in the conservancy for the effective management of these resources.

Prevent late burns next season
