1. NTRODUCTION

1.1 Project Background

Arc Planners and Investment CC (The Proponent) has applied to the Ministry of Mines and Energy (MME) for the proposed small-scale mining activities on Mining Claims (MCs) No. 74633-74634 on the 26th of May 2023. However, the approval and granting of these MCs is subject to an Environmental Clearance Certificate (ECC) from the Ministry of Environment, Forestry and Tourism (MEFT). MC 74633 covers a surface area of 17.8633 hectares (Ha) while MC 74634 covers a surface area of 16.1899 ha, giving a total surface area of 34.0532 ha as shown in (Figure 1). The MCs overlie farm Labusrus 510 and are located about 18 Km north east of Otjosondu in the Otjozondjupa region. The target commodities are Base & Rare Metals.

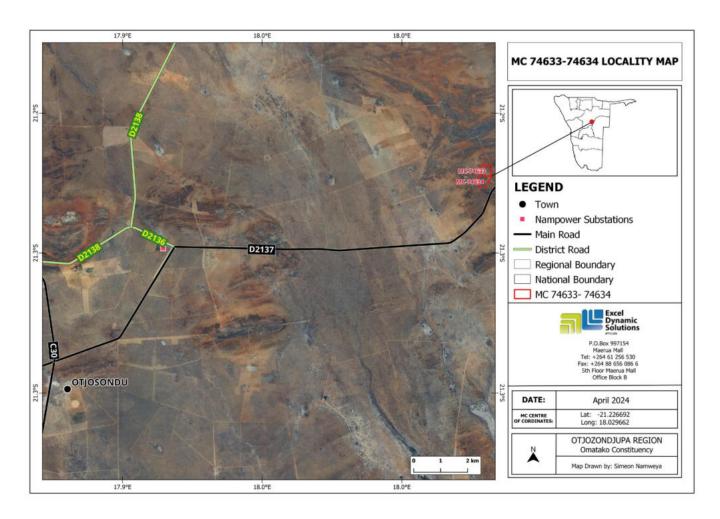

Figure 1: Location of MCs 74633-74634

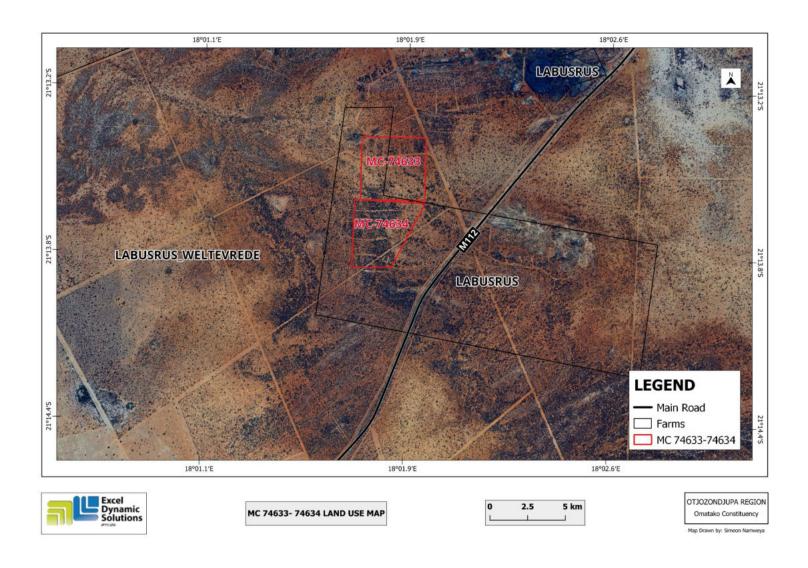

Figure 2: Land Use Map of MCs 74633-74634

In terms of Section 27 (1) of the Environmental Management Act (EMA) (Act No. 7 of 2007) and in line with Sections 32-37 of the EMA, the proposed prospecting and exploration activities on MCs 74633-74634 form part of the listed activities that may not be conducted without an EIA undertaken and an ECC granted. The relevant listed activities as per EIA regulations are:

- 3.1 The construction of facilities for any process or activities which requires a license, right of other forms of authorization, and the renewal of a license, right or other form of authorization, in terms of the Minerals (Prospecting and Mining Act, 1992).
- 3.2 other forms of mining or extraction of any natural resources whether regulated by law or not.
- 3.3 Resource extraction, manipulation, conservation and related activities.

This document has been prepared as a legal requirement of Section 8 of the EMA (Act No. 7 of 2007). The compilation of this EMP is one of the outputs required of the Environmental Consultant by The Proponent. It is required of the Environmental Consultant to comply with the EMA and provide for the following:

- Prepare a detailed Environmental Management Plan to be used as a guideline to monitor compliance to the recommendations stipulated in the EIA, and to assist in managing and monitoring activities throughout the proposed exploration project on the MCs.
- The Environmental Consultant must clarify in the EMP, the roles and responsibilities of the Proponent, the contractors, and any other identified stakeholders.

1.2 Aim of the Draft Environmental Management (EMP)

Regulation 8(j) of the EIA Regulations (2012) requires that a draft Environmental Management Plan (EMP) shall be included as part of the Environmental Assessment (EA). A 'Management Plan' is defined as:

"...a plan that describes how activities that may have significant environments effects on the environment are to be mitigated, controlled and monitored."

An EMP is one of the most important outputs of the EA process. It synthesizes all the proposed management & mitigation and monitoring actions, set to a timeline and with specific assigned

responsibilities. Additionally, it provides a link between the impacts identified in the EA process and the required mitigation measures. It is important to note that an EMP is a statutory document and a person who contravenes the provisions of this EMP may face imprisonment and/or a fine. This EMP is a living document and can be amended to adapt to addressing project changes and/or environmental conditions and feedback from compliance monitoring.

The purpose of this document is, therefore, to guide environmental management throughout the different phases of the proposed exploration activities, namely: planning, prospecting & exploration, and decommissioning & rehabilitation.

- Planning phase This is the stage of the proposed project during which the Proponent
 prepares all administrative and technical requirements needed for the actual works on the
 site. The planning phase includes obtaining of the necessary permits and authorizations
 from relevant national and local stakeholders, and facilitating the recruitment and
 procurement processes, in preparation for the exploration activities.
- Prospecting and Exploration phase This is the phase where the Proponent carries out
 prospecting and exploration activities for the target commodities, and undertakes related
 activities on site. It is also the phase during which maintenance of the area, equipment
 and machinery is done by The Proponent.
- Decommissioning and Rehabilitation This is the phase during which the exploration
 activities on the MCs cease. The decommissioning of exploration operations may be
 considered due to poor exploration results or a decline in the commodity market price.
 Before the decommissioning phase, The Proponent will need to put site rehabilitation
 measures in place.

Environmental Monitoring Requirements: To support and ensure that the proposed mitigation measures are achieving the desired results, a monitoring plan must be implemented alongside the mitigation plan.

This EMP is for use by The Proponent, employees and/or contractors, to provide management measures to be undertaken during exploration, to address the environmental impacts identified in the scoping report and ensure that the impacts on the environment are avoided, or limited if they cannot be avoided completely.

1.3 Appointed Environmental Assessment Practitioner

To fulfill the requirements of the EMA and its 2012 EIA Regulations, The Proponent appointed Excel Dynamic Solutions (Pty) Ltd (EDS), an independent environmental consultant to conduct the required EA process on their (Proponent's) behalf. This draft EMP will be submitted as part of an application for the proposed exploration method on the MCs to the Environmental Commissioner at the Department of Environmental Affairs and Forestry (DEAF), Ministry of Environment, Forestry and Tourism (MEFT).

2. LEGAL OBLIGATIONS GOVERNING THE PROPOSED ACTIVITIES

The content of the EMP must meet the requirements of Section 8 (j) of the EIA Regulations, and the EMP must address the potential environmental impacts of the prospecting and exploration activities on the environment throughout the project life cycle. It must also include a system for assessment of the effectiveness of monitoring and management arrangements after project implementation.

The Proponent, therefore, has the responsibility to ensure that the exploration activities as well as the EA process conform to the principles of the EMA, and must ensure that employees act in accordance with such principles. Table 1 below lists the requirements of an EMP as stipulated by Section 8(e) of the EIA Regulations, primarily on specific approvals and permits that may be required for the activities required of the MCs

Table 1: Applicable legal requirements and permits to the activities of the MCs

| Legislation/Policy/ Guideline | Relevant Provisions | Implications for this project |

2.1 EMP Limitations

This EMP has been drafted with the acknowledgment of the following limitations:

- This EMP has been drafted based on the Environmental Assessment (EA) conducted for targeted prospecting and exploration activities of Base & Rare Metals on MCs 74633-74634.
- The mitigation measures recommended in this EMP document are based on the risks/impacts identified in the ESA, based on the project description as provided by the Proponent, site investigation and public input. Should the scope of the proposed project change, the risks/impacts will have to be reassessed and mitigation measures provided accordingly.

3. EMP IMPLEMENTATION, ROLES AND RESPONSIBILITIES

The Proponent is ultimately responsible for the implementation of the EMP. However, the Proponent may delegate this responsibility at any time, as they deem necessary during the project phases. The roles and responsibilities of all delegates/parties involved in the effective implementation of this EMP are set out in Table 2 below:

Table 2: The persons and institutions responsible for the Implementation of the Draft EMP

| Role (Person and or Institution) | Responsibilities |
|---|--|
| (The Proponent) | -Managing the implementation of this EMP and updating and maintaining it when necessary. |
| | -Management and monitoring of individuals and/ or equipment on-site in terms of compliance with this EMP and issuing fines for contravening EMP provisions. |
| Exploration Manager | This individual will be responsible to ensure that the exploration activities of the project are completed on time. The Manager's duties and responsibilities will include: |
| | -Ensure that relevant commitments contained in the EMP Action Plans are adhered to. |
| | -Ensure relevant staff is trained in procedures entailed in their duties. |
| | -Maintain records of all relevant environmental documentation for the project. |
| | -Reviewing the EMP annually and amending the document when necessary. |
| | -Issuing fines to individuals who may be in breach of the EMP provision and if necessary, removing such individuals from the site. |
| | -Cooperate with all relevant interested and affected parties/stakeholders. |
| | -Development and management of schedules for daily activities |
| Environmental Control Officer (ECO) or Safety, Health & Environmental (SHE) Officer | The Proponent may assign the responsibility of ensuring EMP compliance throughout the project life cycle to a designated member of staff or external qualified and experienced person, referred to in this EMP as the Environmental Control Officer (ECO). The ECO will have the following responsibilities: |
| | -Management and facilitation of communication between the Proponent, PR and Interested and Affected Parties (I&APs) regarding this EMP. |

| Role (Person and or Institution) | Responsibilities |
|--|---|
| | -Conducting site inspections of all areas with respect to the implementation of this EMP (monitor and audit the implementation of the EMP). |
| | -Advising the Proponent or Exploration/Site Manager on the removal of person(s) and/or equipment not complying with the provisions of this EMP. |
| | -Making recommendations to the PR with respect to the issuing of fines for contraventions of the EMP. |
| | -Undertaking an annual review of the EMP and recommending additions and/or changes to this document. |
| Public Relations Officer (PRO) | The PRO will be responsible for the following tasks: |
| | -Liaising between the affected landowners, communities and the Proponent. |
| | -Ensure effective communication with stakeholders, local communities, traditional authorities, media (if necessary) and the public. |
| | -Organising and overseeing public relations activities, Managing public relations issues. |
| | -Preparing and submitting public relations reports, if required. |
| | -Collaborating with personnel and maintaining project-related open communication among personnel. |
| Other responsibilities include | A. Operator: exercise due caution if archaeological remains are found |
| Archaeology: Chance Finds Procedure (CFP) Implementation | B. Site Manager and ECO: secure site and advise management timeously |
| Roles | C. Archaeologist: inspect, identify, advise management, and recover remains. |

4. ENVIRONMENTAL MANAGEMENT & MITIGATION MEASURES

4.1 Management of Key Potential Adverse Environmental Impacts

From the assessment conducted, the following key potential negative impacts have been identified as:

- Potential disturbance of grazing land areas,
- Physical land / soil disturbance
- Impact on local biodiversity (fauna and flora) and habitat disturbance and potential illegal wildlife hunting (poaching) in the area.
- Potential impact on water resources and soils particularly due to pollution,
- Air quality issue: potential dust generated from the project.
- · Potential occupational health and safety risks
- Vehicular traffic safety and impact on services infrastructure such as local roads
- Vibrations and noise associated with drilling activities may be a nuisance to locals
- Environmental pollution (solid waste and wastewater)
- Archaeological and heritage resources impact
- Potential social nuisance and conflicts.

4.2 Aim of the Environmental Management Plan Actions

The aim of the management actions of the EMP is to avoid the above-listed potential negative impacts, where possible. Where impacts cannot be avoided, measures are provided to reduce the significance of these impacts.

Management actions recommended for the potential impacts rated in the ESA carried out for the prospecting and exploration activities were based on the following project stages (phases):

- Planning, Prospecting and Exploration (and site maintenance) phases (Table 3)
- Monitoring (
- •
- •

- Table 4)
- Decommissioning and Rehabilitation

The responsible person(s) should assess these actions in detail and acknowledge their commitment to the specific management actions detailed in the phases given under the following subsections.

4.3 Planning, Prospecting and Exploration Phase Management Action Plans (Mitigation Plan)

The management action plans recommended for this phase are presented in **Table 3** below.

Table 3: Management and mitigation action plans for the planning and exploration phases

| Aspect | Impact | Management and Mitigation Measure(s) | Key Performance Indicator (KPI) | Implementation Responsibility | Resources | Timeline |
|---------------------------------------|---|--|---|----------------------------------|--|----------------------------|
| | | Pl | LANNING PHASE | | | |
| EMP implementation and training | Lack of EMP awareness and implications thereof | -A Comprehensive Health and Safety Plan for the project activities should be compiled. This will include all the necessary health, safety, and environmental considerations applicable to respective works on sites. An EMP non-compliance penalty | -All required Plans and systems are compiled and in place. and Environmental Control Officer (ECO) is appointed | Proponent | EMP implementation Plans and Systems | Pre-exploration works |
| | | system should be implemented on site. The Proponent should appoint an ECO to be responsible for managing the EMP implementation and monitoring. | | | | |
| Authorizations | Lack of Agreements, Permits/ Licenses | -All the required agreements and licenses or permits should be applied for and signed, respectively, before commencement of work on the MCs or as required. -The permits, agreements referred to herein include: land access and land use agreements, compensation agreements (if | -Applicable permits and licenses to obtained from relevant authorities and kept on site for records keeping and future inspections. | Proponent | Proponent Respective authorities and services provider(s) | Prior to exploration works |

| Aspect | Impact | Management and Mitigation Measure(s) | Key Performance Indicator (KPI) | Implementation Responsibility | Resources | Timeline |
|--|--|--|---|--|-------------------------|--|
| | | necessary), rehabilitation commitment agreements, and petroleum storage permits (if necessary). | -Agreements/permits signed and obtained from on time, min. 2 months prior to plan commencement date of works. | | | |
| Communication between the Proponent and other neighbouring land users and custodians | Lack of communication (proper liaison) between other land users and Proponent with regards to land use | -The Proponent may appoint a Public Relation Officer (PRO)/representative to liaise with the land usersA clear communication procedure/plan which should include a grievance mechanism. | A PRO is appointed -Ongoing Farmers' Engagement & Consultation throughout the project cycles, when and as required. PRO contact details to be provided to the affected landowners | Proponent | PRO Complaint's logbook | PRO appointment (Prior to project activities) and their responsibilities throughout the project activities |
| Employment | Creation of employment opportunities | -Preference for employment of general and semi-skilled workers should be prioritised towards local residents Employment of non-residents, especially should be justified, -Equal opportunity should be provided for both men and women, when and where possible. | -Number of locals employed for exploration activities | Proponent in collaboration with the Exploration Manager (if necessary) | Record of employees | Pre-project activities and when necessary, throughout |

| Aspect | Impact | Management and Mitigation Measure(s) | Key Performance Indicator (KPI) | Implementation Responsibility | Resources | Timeline |
|--|--|---|---|---------------------------------|---|---|
| Specialized procurement of services | Contractors and services | -The Proponent should use locally derived services where practically possible | Number of hired contractors. | Proponent Exploration Manager | Record of hired or contracted companies or services providers | Pre-project activities and when necessary, throughout |
| | | PROSPECTINO | AND EXPLORATION P | HASE | | |
| EMP implementation and training | Lack of EMP awareness and implications thereof | -EMP trainings should be provided to all new workers on site. -All site personnel should be aware of necessary health, safety, and environmental considerations applicable to their respective work. -The implementation of this EMP should be monitored. The site should be inspected, and a compliance audit done throughout the project cycle. An EMP non-compliance penalty system should be implemented on site. | Compliance monitoring conducted bi-annually and should be recorded. | ECO | Bi-annual reports Records of EMP training conducted. | Throughout the exploration phase and as required |
| Communication between the Proponent and other neighbouring | Lack of communication (proper liaison) between farmers and | -The PRO/project representative contact details must be shared with all affected parties prior to undertaking activities, for easy | -PRO is part of the project personnel. | PRO | Complaint's logbook PRO contact details to be provided to the affected land users. | Throughout the exploration activities |

| Aspect | Impact | Management and Mitigation Measure(s) | Key Performance Indicator (KPI) | Implementation Responsibility | Resources | Timeline |
|---------------------------|------------------------------------|---|---|---------------------------------------|--|-----------------------|
| land users and custodians | Proponent with regards to land use | communication during exploration activities. -The Proponent should compile a clear communication procedure / plan which should include a grievance and response mechanism. | -Ongoing Farmers'/ affected parties' Engagement & Consultation throughout the project cycles, when and as required -Community/farmers' | | Records of farmers' consultation Land access agreement conditions | |
| | | | grievances addressed to their satisfaction | | | |
| Grazing land | Loss of grazing areas | -Any unnecessary removal or destruction of grazing land, due to exploration activities should be avoided. | -Limited cleared sites -Less access tracks | Proponent / Exploration Manager | Grievance logbook | Throughout the phases |
| | | -Vegetation found on the site, but not in the targeted exploration areas should not be removed but left to preserve biodiversity and grazing land. -Workers should refrain from | -No complaints from farmers regarding significant land/vegetation clearing | ECO | | |
| | | driving off-road and creating unnecessary tracks that may contribute to soil erosion and loss of grazing land. -Environmental awareness on the importance of the preservation of | | | | |

| Aspect | Impact | Management and Mitigation Measure(s) | Key Performance Indicator (KPI) | Implementation Responsibility | Resources | Timeline |
|------------------------|---|--|--|-------------------------------|---------------------------------------|---|
| | | grazing land for local livestock should be provided to the workers. | | | | |
| Water Resources Use | Over- abstraction (water demand and availability) | -The Proponent should be water- use conscious and consider voluntary water use reduction by sticking to their proposed threshold volumes or less when possible. -The Proponent should aim to use water efficiently, recycle and re- use where necessary and possible. -Water used to cool off operational equipment may be captured and used for the cleaning of project equipment, if possible. -Water conservation awareness and saving measures training should be provided to all the project workers to promote water conservation -An efficient water recycling system that decreases water usage at exploration sites -Diverting water filled with impurities away from water bodies to fend off contamination | Water supply agreements Proof/ recording/ quantification of water saving efforts. Water supplier -Water permits -inspection of water storage tanks on site | Exploration Manager | Water supplying agreements Proponent | Once off supply agreement Throughout the exploration phase |

| Aspect | Impact | Management and Mitigation Measure(s) | Key Performance Indicator (KPI) | Implementation Responsibility | Resources | Timeline |
|--------|--|--|---|-------------------------------|---|----------------------------------|
| | | -A practical water treatment process for groundwater, process water, and any other form of water used in exploration activities A water management system that runs during exploration and long after the completion of all exploration activities | | | | |
| Soils | Physical soil/land disturbance and loss of topsoil | -Overburden should be handled efficiently during operations to avoid erosion when subjected to erosional processes. -Stockpiled topsoil and drill materials should be used to backfill the excavated and disturbed site areas/spots. -Soils that are not within the intended and targeted footprints of the site should be left undisturbed and soil conservation implemented as far as possible. -Project vehicles and machinery should stick to access roads provided for the project operations, and avoid unnecessary creation of further tracks on site, resulting in soil compaction. | No proliferation of informal vehicle tracks. No new erosion gullies. | ECO | Proponent All personnel Complaint's logbook | Throughout the exploration phase |

| Aspect | Impact | Management and Mitigation Measure(s) | Key Performance Indicator (KPI) | Implementation Responsibility | Resources | Timeline |
|---------------------------|-------------------------------------|---|--|-------------------------------|--|------------------------------|
| Soils and water resources | Soils and water resources pollution | -The project footprint area should not be cleared entirely, and the exploration vehicles and equipment must have designated sites for parking/storage in order to avoid soil disturbance -Sites of operations must be rehabilitated after completion of works onsite. -Oil and wastewater spill control preventive measures should be in place on site to management soil contamination, preventing and minimizing the contamination from reaching water bodies. -All project employees should be sensitized to the impacts of soil pollution and advised to follow appropriate fuel delivery and handling procedures. | No complaints of pollutants on the soils and eventually in the water due to exploration activities No visible oil spills on the ground or pollution spots. -Waste containers provided at exploration | ECO | Complaint's logbook Non-permeable material to cover the ground surface at areas where hydrocarbons and potential pollutants are utilized. | Throughout exploration phase |
| | | -The Proponent should develop and prepare countermeasures to contain, clean up, and mitigate the effects of oil spills. This includes keeping spill response procedures and a well-stocked cache of easily accessible supplies. -Ensure employees receive basic Spill Prevention, Control, and | work sites and campsites | | | |

| Aspect | Impact | Management and Mitigation Measure(s) | Key Performance Indicator (KPI) | Implementation Responsibility | Resources | Timeline |
|--------|--------|--|------------------------------------|-------------------------------|-----------|----------|
| | | Countermeasure (SPCC) training and mentor new workers as they get hired. | | | | |
| | | -Project machines and equipment should be equipped with drip trays to contain possible oil spills when operated on site. | | | | |
| | | -Polluted soils must be removed immediately and put in a designate waste type container for later disposal. | | | | |
| | | -Drip trays must be readily available to ensure that accidental fuel spills along fuel storage facilities or fuel-consuming equipment are caught and cleaned up on time | | | | |
| | | -Heavily polluted soil must be collected and transported away from the site to an approved and appropriately classified hazardous waste treatment facility. | | | | |
| | | -Washing and servicing of equipment contaminated by hydrocarbons should take place at a dedicated area, where contaminants are prevented from contaminating soil or water resources. | | | | |

| Aspect | Impact | Management and Mitigation Measure(s) | Key Performance Indicator (KPI) | Implementation Responsibility | Resources | Timeline |
|--------------|-------------------------|--|--|----------------------------------|---|----------------------------------|
| | | -Sewage and ablution wastewater should be treated as according to the portable toilet manufacturer instructions. | | | | |
| Biodiversity | Loss of Fauna and Flora | Fauna: -Poaching of wildlife on the farms and surrounding areas is strictly prohibited. -Project workers should refrain from killing or snaring livestock that may be found on and around the site. -Access roads (even existing ones) should be utilized appropriately in a manner that disturbs minimal land areas as possible, to minimize faunal habitat destruction. -Any faunal breeding sites discovered on the site should not be disturbed. -Environmental awareness on the importance of faunal preservation should be provided to the workers and contractors. Flora: | No disturbance to unmarked areas. No complaints from locals regarding unauthorised vegetation removal or cutting down of trees. No complaints of wildlife hunting by the project personnel. No intentional disturbance and destruction of site vegetation and faunal species Visible preservation of onsite vegetation | ECO | Barricading tape (to indicate working areas) Complaint logbook | Throughout the exploration phase |

| Aspect | Impact | Management and Mitigation Measure(s) | Key Performance Indicator (KPI) | Implementation Responsibility | Resources | Timeline |
|--------|--------|---|------------------------------------|----------------------------------|-----------|----------|
| | | -The Proponent should avoid unnecessary removal of vegetation | | | | |
| | | -Vegetation found on the site, but not in the targeted exploration areas should not be removed but left to preserve biodiversity on the site. | | | | |
| | | -Movement of vehicle and machinery should be restricted to existing roads and tracks to prevent unnecessary damage to vegetation. | | | | |
| | | -Design access roads appropriately in a manner that disturbs as little vegetation as possible. | | | | |
| | | -Vegetation clearing to be kept to a minimum. The vegetation of the site is largely low and open and therefore whole-sale vegetation clearing should only be applied where necessary and within the MCs 's footprint. | | | | |
| | | -Vegetation found on the site, but not in the targeted areas should not be removed but left to preserve biodiversity on the site. | | | | |

| Aspect | Impact | Management and Mitigation Measure(s) | Key Performance Indicator (KPI) | Implementation Responsibility | Resources | Timeline |
|-----------------|---|--|--|-------------------------------|--|--|
| | | -Environmental awareness on the importance of floral biodiversity preservation should be provided to the workers and contractors. | | | | |
| Illegal hunting | Illegal hunting of wildlife | -No wildlife hunting is permittedSite personnel should refrain from killing/poaching or intentionally disturbing wildlife, or any faunal species found on site and around the MCs siteThe No tolerance to Poaching Policy should be developed and applicable to all site personnel. | -Incident reports of illegal hunting of wildlife by the Project workers -Contact details of the Anti-poaching Police Unit provided and visible onsite | ECO | Complaint's logbook -Anti-poaching Police Unit -ECO | During site set up, and throughout exploration phase |
| Land Use | Conflict between land uses and exploration activities | -Exploration activities should not in any way hinder the existing land uses within the MCs, but rather promote co-existence throughout the project operations while respecting other land users. -The project workers and vehicles should be limited to the actual MCs active sites, and not unnecessarily wander or loiter around other parts of the site. -The Proponent should ensure that their activities comply with the conditions set by the competent, regulatory, and affected | Land access and use permits/authorizations. Compliance with conditions set within operational permits by relevant and affected authorities. Little to no complaints of significant interference from the | PRO Proponent ECO | Proponent Relevant authorities (MEFT, MME, etc.) | Throughout the exploration phase |

| Aspect | Impact | Management and Mitigation Measure(s) | Key Performance Indicator (KPI) | Implementation Responsibility | Resources | Timeline |
|---------------------|------------------------------------|---|---|-------------------------------|--|--|
| | | authorities such that the proposed exploration activities do not severely impact the different existing activities around the MCs. | neighbouring land users | | | |
| Road use and safety | Increase in vehicular traffic flow | -Vehicles should be driven only on existing access roads and the temporary access roads created on site to facilitate operations; no new roads should be constructed, where possible. -The transportation of project materials, equipment and machinery should be kept at a minimum, to reduce pressure on local roads. -Heavy truck loads should comply with the maximum allowed limit while transporting materials and equipment/machinery on the public and access roads. -Drivers of all project vehicles should be in possession of valid and appropriate driving licenses. Vehicle drivers should adhere to the road safety rules. -Drivers should drive slowly (30km/hour or less), and be on the | No complaints from members of the public regarding vehicular traffic issues related to the project activities. All personnel operating the project vehicles and machinery are appropriately licensed and possession of valid driving licenses. Demarcated areas for parking, offloading, and loading zones are on sites. If required, site access road permits obtained, and requirements fulfilled. | Proponent | Number of project vehicles on site Names of drivers Frequency of water carting | Throughout exploration phase Site access permit (s) to be applied for and obtained prior to commencement of exploration works |

|----------------|--|---|---|----------------------------------|--|---|--|--|--|--|
| | PROGRESSIVE REHABILITATION AND DECOMMISSIONING PHASE | | | | | | | | | |
| Rehabilitation | Disturbance and damaging of land | -All drilled boreholes and excavated pits related to the project activities should be capped and backfilled, respectively. -All waste generated and stored on site during exploration activities should be disposed of at the respective nearest solid waste management sites. -The stockpiled topsoil should be levelled soon after completion of works at sites. -Any temporary setup on site should be dismantled, and the area rehabilitated as far as practicable, to its original state. -Explored areas on worksites should be progressively rehabilitated by d backfilling. -Provision of both financial and technical resources for progressive rehabilitation. | Capped boreholes and backfilled pits No sign of waste or littering seen on site and around site areas. Carrying away of waste, and removal of vehicles and equipment from site No stockpiled topsoil (topsoil is levelled after completion of each work) Campsite dismantled and materials taken away from site. Visible signs of stockpiled topsoil | Proponent | Excavators and other backfilling/demolishing machinery Record of pits excavated, and boreholes drilled (if any) Waste containers on sites Photo records of backfilled sites Records of finances set aside for decommissioning activities | Progressive rehabilitation done throughout the exploration phase and complete decommission and rehabilitation done after completion of exploration works. | | | | |

4.4 Monitoring Action Plans (Monitoring Plan)

To support and ensure that the proposed mitigation measures are achieving the desired results, a monitoring plan must be implemented. The monitoring action plan recommended for proposed exploration works are presented in

Table 4 below.

Table 4: Monitoring Action Plan

| Environmental Feature | Impact | Monitoring Actions | Implementation responsibility | Frequent | Threshold | Action if threshold is exceeded |
|-----------------------------|--|--|--|----------|--|---|
| Archaeology and Heritage | Presence or unearthing of archaeological or cultural heritage resources Loss of topsoil | -To prevent destruction of artefacts and sites, the preservation of all artefacts and sites that are discovered within the site boundary or around the project site area should be effectively done. -Inspect records of findings. -All measures should be considered to present the loss of topsoil | ECO Archaeologist ECO and Exploration Manager | Daily | Unearthing of archaeological or cultural heritage resources Proliferation of new vehicle tracks | Cease all activities on site and wait for NHC to inspect site and give further instructions / actions Rehabilitation of affected areas |
| Monitoring | EMP non- compliance | -The ECO or the Proponent/Contractor should monitor the implementation of this EMP to ensure compliance. The ECO(s) should inspect the site throughout the exploration period and after completion. | ECO | Daily | Increase in health, safety and environmental damage incidence | Daily safety talks, Remedy the consequences |
| Biodiversity | Loss of biodiversity | -Comply with any marked no-go areas and avoid areas sensitive to any type of disturbance. Clear only footprint areas to maintain as much of the remaining natural vegetation on site and to prevent loss of habitat (if so, advised by MEFT). | ECO Workers involved in this phase | Weekly | Vegetation clearance outside of marked areas. | Rehabilitation of affected areas to the satisfaction of the ECO |

| Environm Feature | nental | Impact | Monitoring Actions | Implementation responsibility | Frequent | Threshold | Action if threshold is exceeded |
|---------------------|--------|---------------|---|-------------------------------|--------------|-------------------|---------------------------------|
| Health | and | Health and | -Workers should be trained on how to | ECO | Daily/Weekly | Health and safety | Remedy the |

| | | -No heavy trucks or project related | | | | |
| | | vehicles should be parked on | | | | |
| | | biologically sensitive areas. | | | | |

5. Decommissioning and Rehabilitation

Successful rehabilitation requires careful consideration of the local ecological context, in combination with the rehabilitation goals. The most important steps in undertaking a successful rehabilitation are planning and environmental awareness (environmental education) on the importance of progressive rehabilitation (or post-activity rehabilitation,) and its importance to the environment. Furthermore, successful implementation of the planned rehabilitation will depend on a few factors - the rehabilitation program, characteristics of the site, nature of disturbance, rehabilitation methods, as well as resource availability.

Site Specific Rehabilitation Plan

To ensure that they do their best to rehabilitate the disturbed areas, the Proponent needs to:

- Utilize stockpiled subsoil and topsoil to back fill the excavated pits/trenches.
- Make financial provision that will be used for post-exploration rehabilitation program.
- Backfill all pits and trenches.
- Level topsoil that was stockpiled for exploration purposes.
- Remove project vehicles and equipment from the site and taken to designated parking facility off site.
- All project support structures such as ablution facilities (toilet and washroom system), and storage containers/tanks shall be demolished, and the waste taken to designated waste sites. The site areas on which these structures were set up will be rehabilitated to preexploration state.
- All accumulated waste (hazardous, solid, and general) up until the cessation of exploration activities must be removed site and transported to designate off site waste management facilities.
- Re-vegetation of areas with species consistent with surrounding vegetation

Arc Planners and Investment CC: MCs No. 74633-74634

Draft EMP

APPENDIX 1: CHANCE FINDS PROCEDURE (AFTER KINAHAN, 2020)

Areas of proposed development activity are subject to heritage survey and assessment at the

planning stage. These surveys are based on surface indications alone, and it is therefore possible

that sites or items of heritage significance will be found during development work. The procedure

set out here covers the reporting and management of such finds.

Scope: The "chance finds" procedure covers the actions to be taken from the discovery of a

heritage site or item to its investigation and assessment by a trained archaeologist or other

appropriately qualified person.

Compliance: The "chance finds" procedure is intended to ensure compliance with relevant

provisions of the National Heritage Act (27 of 2004), especially Section 55 (4): "a person who

discovers any archaeological Objectmust as soon as practicable report the discovery to

the Council". The procedure of reporting set out below must be observed so that heritage remains

reported to the NHC are correctly identified in the field.

Manager/Supervisor must report the finding to the following competent authorities:

National Heritage Council of Namibia (061 244 375 / Technical Office +264 61 301 903)

National Museum (061 276800),

National Forensic Laboratory (061 240461).

Archaeological material must NOT be touched. Tempering with the materials is an offence under

the heritage act and punishable upon conviction by the law.

Responsibility:

Operator: To exercise due caution if archaeological remains are found

Foreman: To secure site and advise management timeously

Superintendent: To determine safe working boundary and request inspection

Archaeologist: To inspect, identify, advice management, and recover remains

Procedure:

Action by person identifying archaeological or heritage material:

44

- a) If operating machinery or equipment stop work
- b) Identify the site with flag tape
- c) Determine GPS position if possible
- d) Report findings to foreman

Action by foreman

- a) Report findings, site location and actions taken to superintendent
- b) Cease any works in immediate vicinity

Action by superintendent

- a) Visit site and determine whether work can proceed without damage to findings
- b) Determine and mark exclusion boundary
- c) Site location and details to be added to project GIS for field confirmation by archaeologist

Action by Archaeologist

- a) Inspect site and confirm addition to project GIS
- b) Advise NHC and request written permission to remove findings from work area
- c) Recovery, packaging and labelling of findings for transfer to National Museum

In the event of discovering human remains

- a) Actions as above
- b) Field inspection by archaeologist to confirm that remains are human
- c) Advise and liaise with NHC and Police
- d) Recovery of remains and removal to National Museum or National Forensic Laboratory, as directed.
