## 2.4. SUPPORTING INFRASTRUCTURE

### 2.4.1 Basecamp

Given the location the Exclusive Prospecting License (EPL) in a communal area, a suitable site must be identified in collaboration with all relevant authorities including the Traditional Authority to decide on a basecamp location. Where practical and possible, it is strictly recommended that for unskilled labour, local community members are employed and thus accommodated at their existing homestead to mitigate and reduce potential conflict with the conservancy wildlife and livestock management protocols.

Therefore, it is highly recommended that temporary ablution facilities must be provided and limited to within the existing base-camp footprint pre-identified national park campsites, and the necessary authorization must be obtained prior to installation of any such facility.

### 2.4.2 Water supply

Water will, at this stage only be required mainly for domestic use and will be sourced from the nearby boreholes or Omaso Village and transported by truck in 5 000 litres water tanks, thus equally stored in tanks at the base-camp site. Where portable ablution facility are provided, it is recommended that they are regularly emptied and sewer transported by the returning water supply truck.

### 2.4.3 Power supply

In case where the exploration activity advances to the bulk sampling (trenches / drilling) stage, the various machinery and equipment (drill rigs, front-end loader and excavator)
