

GAME COUNTS IN NORTH-WEST NAMIBIA

Hobaterere concession

May 2024

No counts were undertaken in 2013 and 2014.

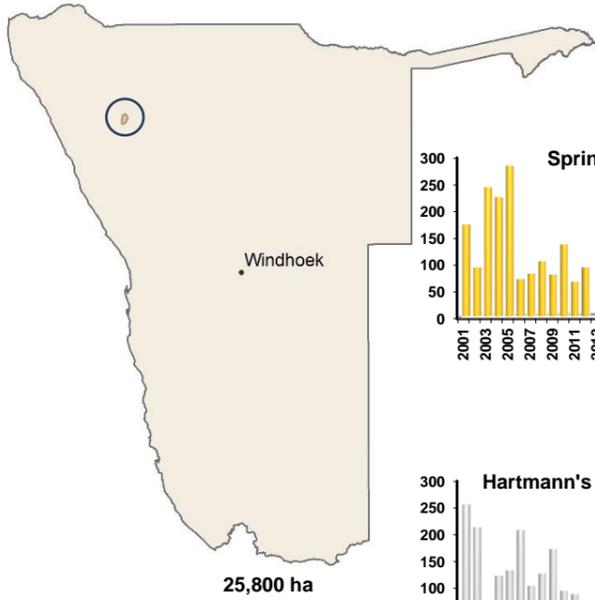

Total number of animals seen each year

Population Estimates

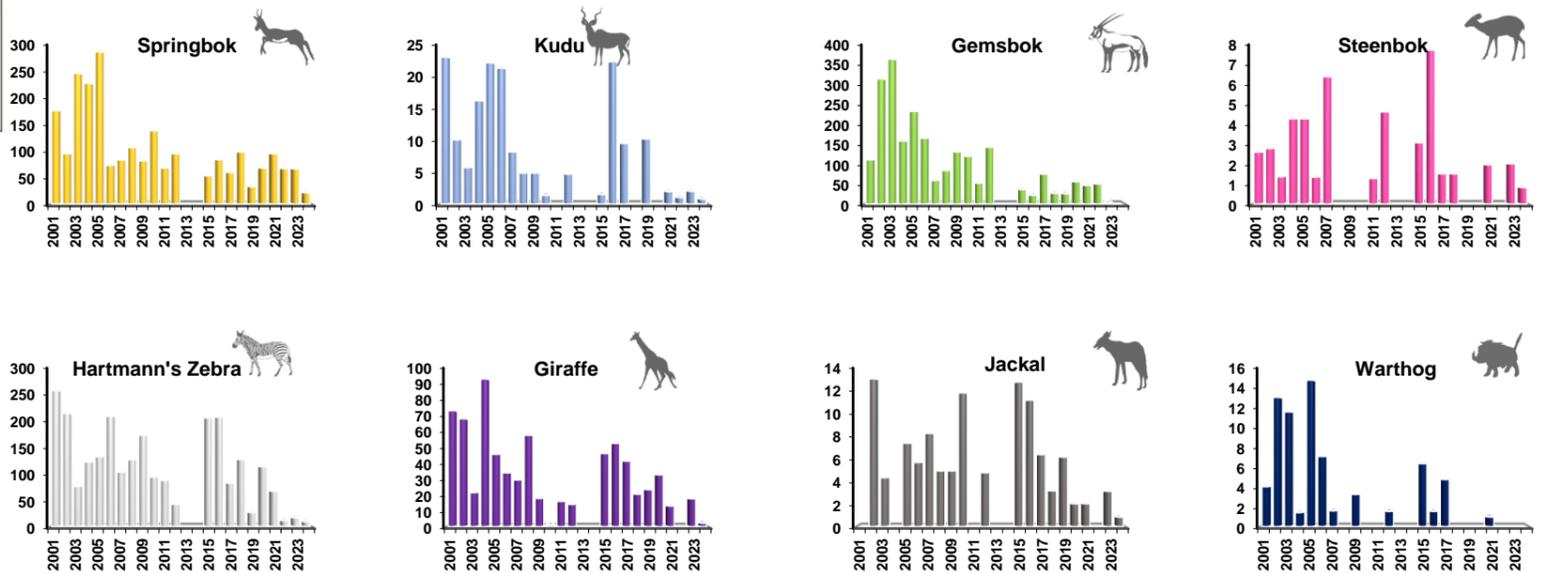

Species	Estimate	Upper 95% CL
Gemsbok (HN)	10	165
Kudu (HN)	11	163
Springbok (HN)	164	980
Steenbok (HN)	47	438
Hartmann's Zebra (HN)	39	139 ^{DE}

analysis. This takes account or drop out in detection with distance from the transect line. Model selection: U = uniform key; HN = half normal

Trends - Number of animals per 100km

Percentage of all animals counted in the NW (north of the vet fence): 2001-2024

The dramatic spike in the proportion of gemsbok seen in Hobaterere relative to the rest of the north-west in 2021 reflected the overall decline in animal numbers in communal conservancies. By 2023 numbers of gemsbok in all sub areas of the north-west were very low, even in the concession areas. In Hobaterere, it seems all species are currently in danger of being wiped out.

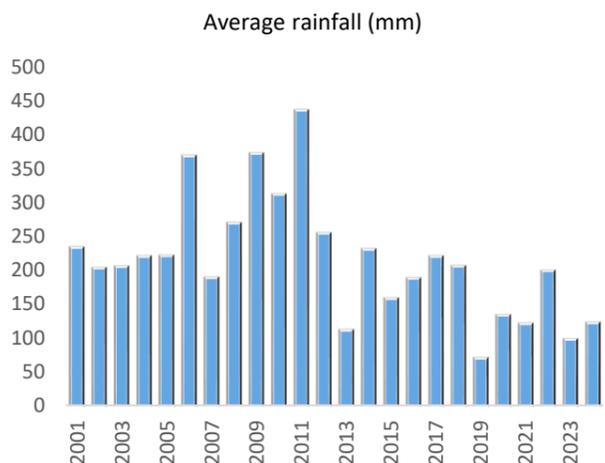

Animals seen during this count

Total Route km	114
Total area (km2)	258
Number of routes	4
% Area excluded	5

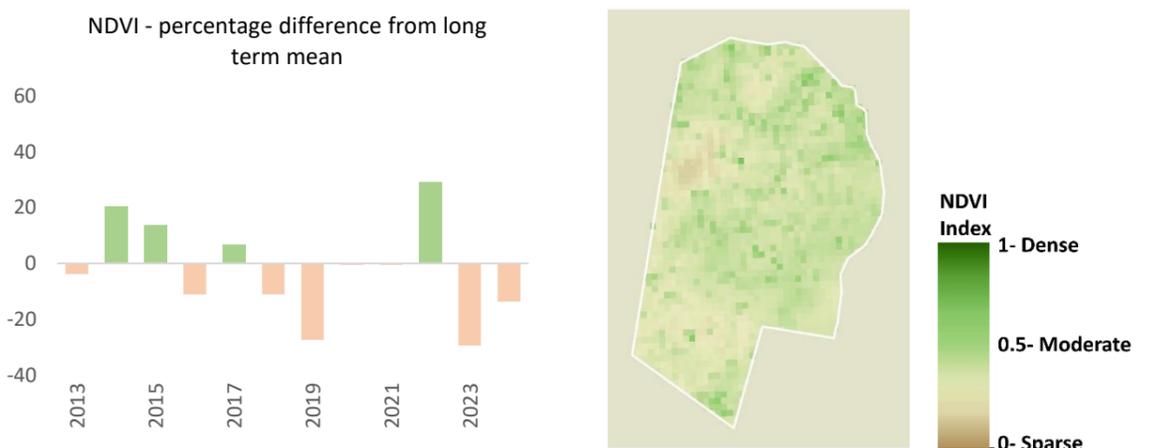

Species	Count
Gemsbok	2
Giraffe	3
Kudu	4
Ostrich	-
Springbok	26
Steenbok	1
H. Zebra	12

Rainfall

The rainfall season is from July to June and values are an average for the whole area.

Vegetation

NDVI is a measure of the density of chlorophyll in vegetation cover. It can be used as an indicator of the amount of biomass available to wildlife. The map shows the NDVI status in the current year (Feb-Apr) and the trend indicates the average deviation of the concession from the long-term mean, in each year.
